REGULAR MEETING AGENDA
CITY COUNCIL OF THE CITY OF SAN JACINTO
TUESDAY, JULY 21, 2026
5:30 CLOSED SESSION
6:30 PM OPEN SESSION

COMMUNITY CENTER
625 S. PICO AVENUE
SAN JACINTO, CA 92583
951-487-7330

In compliance with the Americans with Disabilities Act, if you need special assistance to participate in this meeting, please contact the office of the City Clerk at 951-487-7330 ext. 339. Notification 48 hours prior to a meeting will enable the City to make reasonable arrangements to ensure accessibility to that meeting [28 CFR 35.102.35.104 ADA Title II].

The City Council meeting may be observed virtually by accessing https://horizon.agendalink.app/engage-v2/sanjacintoca/agendas and selecting the "Watch" button next to the corresponding agenda for the meeting date, or in person at the San Jacinto Community Center.

Public Comments will only be accepted in person during the meeting or in writing to the City Clerk no later than 3:00 PM on the day of the meeting.

Watch the Meeting (Official Livestream)
The official way to watch and listen to the City Council meeting is through the City's AgendaLink livestream by selecting the **"Watch"** option for the applicable meeting on the City's website.

Provide Live Public Comment by Telephone
Members of the public wishing to provide live public comment may participate by telephone using the Microsoft Teams dial-in information below. The telephone line is intended **only** for individuals who wish to address the City Council during the designated Public Comment period. The City Council meeting may be observed virtually by accessing https://horizon.agendalink.app/engage-v2/sanjacintoca/agendas and selecting the "Watch" button next to the corresponding agenda for the meeting date, or in person at the San Jacinto Community Center.

Dial in by phone:
+1 (951) 465-7684
Conference ID: 444 922 998#

Public Comment Workflow

When the Mayor opens the Public Comment portion of the meeting, the process will be as follows:

- Members of the public will call the Teams dial-in number and wait in the Teams lobby.
- Callers should remain in the Teams lobby until the applicable Public Comment period opens. They should not be admitted before the Mayor opens Public Comment.
- The Clerk will admit one caller at a time from the lobby as they are ready to speak. If multiple callers are waiting, they should remain in the lobby until it is their turn.
- Once admitted, callers should be able to speak. If necessary, the Clerk can unmute the caller.
- The Mayor will recognize the caller, and the caller should first state their name for the record before providing their public comment.
- Each caller will have up to three (3) minutes to speak.
- After completing their comments, callers may either hang up, or the Clerk may remove them from the meeting before admitting the next speaker.

Written public comments *may only be submitted via email* to comments@sanjacintoca.gov or by hard copy to the Office of the City Clerk at 595 S. San Jacinto Ave., San Jacinto, CA 92583, no later than 3:00 p.m. on the day of the meeting. Comments via text and social media (Facebook, Twitter, etc.) will not be accepted. Please identify the agenda item number and "PUBLIC COMMENT" in the subject line of the email or hard copy document. All written correspondence received by the 3:00 p.m. deadline will be distributed to the legislative body prior to the meeting and retained with the official meeting record. All email comments shall be subject to the same rules as would otherwise govern in-person speaker comments at the Council meeting.

Reading of Public Comments: The City Clerk will read all email comments, provided that the reading shall not exceed three (3) minutes or such other time as the Council may provide, consistent with the time limit for speakers at a Council meeting. The email comments submitted shall become part of the record of the Council meeting.

2. PUBLIC COMMENTS

3. CONSENT CALENDAR

A. City Council

A1. Waiver of Full Reading of Ordinance(s), and Reading by Title Only

A2. Minutes of the Regular City Council Meeting of June 16, 2026
RECOMMENDATION:
Staff recommends that the City Council APPROVE the City Council Regular Meeting Minutes of June 16, 2026.

A3. Minutes of the Regular City Council Meeting of July 7, 2026
RECOMMENDATION:
Staff recommends that the City Council APPROVE the City Council Regular Meeting Minutes of July 7, 2026.

A4. Warrants and Disbursements - June 2026
RECOMMENDATION:
Staff recommends that the City Council REVIEW and APPROVE the Warrants and Disbursements for the period of June 2026 in the amount of $8,855,259.41.

A5. Treasurer’s Report at April 30, 2026

RECOMMENDATION:

Staff recommends that the City Council RECEIVE and FILE the Treasurer’s Report for the month ending April 30, 2026.

A6. Treasurer’s Report at May 31, 2026

RECOMMENDATION:

Staff recommends that the City Council RECEIVE and FILE the Treasurer’s Report for the month ending May 31, 2026.

A7. Resolution Approving San Jacinto Power 2026 Integrated Resource Plan

RECOMMENDATION:

Staff recommends that the City Council ADOPT Resolution No. 4142, approving the San Jacinto Power 2026 Integrated Resource Plan.

A8. Working Hours for Esplanade Avenue Widening Phase 1 Warren Road to Sanderson Avenue (CIP# 06-145)

RECOMMENDATION:

Staff recommends that the City Council AUTHORIZE working hours for Granite Construction Company.

A9. League of California Cities Open Letter Supporting Comprehensive Tort Reform to Protect California Taxpayers, Survivors, and Essential Public Services

RECOMMENDATION:

Staff recommends that the City Council:

— 1. APPROVE the City of San Jacinto joining the League of California Cities and other public agencies and organizations as a signatory to the open letter to the California State Legislature titled “Urgent Need for Comprehensive Tort Reform to Protect California Taxpayers, Survivors, and Essential Public Services”; and

— 2. AUTHORIZE the Interim City Manager, or designee, to sign and submit substantially similar letters of support or coalition letters consistent with this City Council-approved position relating to public entity tort reform, public agency liability exposure, insurance and risk pool stability, and the protection of taxpayer-funded essential public services.

A10. Resolution No. 4137– Authorization to Participate in the County of Riverside’s Urban County Programs for Fiscal Years 2027, 2028, and 2029, and Approval of a Cooperation Agreement with the County of Riverside

RECOMMENDATION:

Staff recommends that the City Council:

— 1. ADOPT Resolution No. 4137 authorizing the City’s participation in the County of Riverside’s Urban County Programs;

— 2. APPROVE a Cooperation Agreement with the County of Riverside for the City’s use of Community Development Block Grant (CDBG), Home Investment Partnership (HOME), and Emergency Solutions Grant (ESG) funds for Fiscal Years 2027, 2028, and 2029; and

— 3. AUTHORIZE the City Manager to execute the Cooperation Agreement and related documents, with minor modifications as approved by the City Attorney.

4. PUBLIC HEARING

4.1 A proposal by Taylor and Clark Consulting on behalf of Chacon, LLC, to establish a master-planned residential development consisting of 419 dwelling units as well as the construction of onsite roadways, a detention basin, parks, and on-site landscaping on 73.97-net acres.

RECOMMENDATION:

The Planning Commission recommends that the City Council:

— 1. DETERMINE that the proposed Project will not have a significant effect on the environment with the incorporation of mitigation measures based on the findings set forth in the case record and ADOPT a Mitigated Negative Declaration (MND) and Mitigation Monitoring and Reporting Program, pursuant to the California Environmental Quality Act (CEQA);

— 2. ADOPT Resolution No. 4138 to ADOPT the General Plan Amendment entitled: A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF SAN JACINTO, CALIFORNIA APPROVING GENERAL PLAN AMENDMENT PLAN23-0004 FROM VERY LOW DESNITY RESIDENTIAL TO LOW DENSITY RESIDENTIAL FOR THE CHACON FARMS RESIDENTIAL DEVELOPMENT LOCATED AT THE NORTHWEST CORNER OF ESPLANADE AVENUE AND CAWSTON AVENUE;

— 3. INTRODUCE Ordinance No. 26-04 to APPROVE the Change of Zone entitled: AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF SAN JACINTO, CALIFORNIA, APPROVING ZONE CHANGE PLAN23-0005, CHANGING THE ZONING FROM RESIDENTIAL RURAL (RR) TO RESIDENTIAL LOW DENSITY (RL) LOCATED AT THE NORTHWEST CORNER OF ESPLANADE AVENUE AND CAWSTON AVENUE; and

— 4. ADOPT Resolution No. 4141 to APPROVE the Project entitled: A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF SAN JACINTO, CALIFORNIA APPROVING A GENERAL PLAN AMENDMENT (PLAN23-0004) FROM VERY LOW DESNITY RESIDENTIAL TO LOW DENSITY RESIDENTIAL, A CHANGE OF ZONE (PLAN23-0005) CHANGING THE ZONING FROM RESIDENTIAL RURAL (RR) TO RESIDENTIAL LOW DENSITY (RL), A PLANNED DEVELOPMENT PERMIT TO EASTABLISH A PLANNED RESIDENTIAL DEVELOPMENT WITH 419 DWELING UNITS, AND TENTATIVE TRACT MAP 39076 TO SUBDIVIDE THE 73.97 ACRE PROPERTY LOCATED AT THE AT THE NORTHWEST CORNER OF ESPLANADE AVENUE AND CAWSTON AVENUE.

4.2 Appeal of the Conditions of Approval for the Magnet Shopping Center that includes a Grocery Store, Retail Shops/Pads, Restaurants Pads with Drive-Thru Service, a Car Wash with Drive-Thru Service, a Gas Station with a Convenience Store that includes alcohol sales and a Tentative Parcel Map to create 12 commercial lots on 14.50 acres.

RECOMMENDATION:

Staff Recommends that the City Council:

— 1. DETERMINE, based on the whole of the administrative record, that the Project, with incorporation of the mitigation measures identified in the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program, will not have a significant effect on the environment; determine that the recommended revisions to the Conditions of Approval do not result in any new or substantially more severe environmental impacts or otherwise require additional environmental review; and AFFIRM the Planning Commission's adoption of the Mitigated Negative Declaration and associated Mitigation Monitoring and Reporting Program pursuant to the California Environmental Quality Act.

— 2. GRANT the appeal in part, solely to the extent reflected in staff's recommended revisions to the Conditions of Approval, and DENY the remainder of the appeal; and,

— 3. UPHOLD, AS MODIFIED, the Planning Commission's approval of PROJ23-0013 to establish the Magnet Shopping Center, including: a. Site Plan and Design Review No. USE23-0009 for the overall site plan and design of the shopping center; b. Tentative Parcel Map No. 38831, SUB23-0005, to subdivide the project site into 12 commercial lots; c. Conditional Use Permit No. USE24-0052 to allow alcohol sales within a service station consisting of a gasoline station and a 3,956-square-foot convenience store; d. Minor Use Permit No. USE23-0011 for a 3,886-square-foot restaurant with outdoor seating and a drive-through lane, identified as Pad 1; e. Minor Use Permit No. USE23-0012 for a 3,203-square-foot restaurant with a drive-through lane, identified as Pad 2; f. Minor Use Permit No. USE24-0038 for a 5,705-square-foot retail and restaurant building with a drive-through lane, identified as Pad 3; g. Minor Use Permit No. USE23-0013 for a 3,203-square-foot restaurant with a drive-through lane, identified as Pad 4; and h. Minor Use Permit No. USE23-0014 for an automated 3,588-square-foot car wash with three queuing lanes; subject to the Conditions of Approval, including the modifications recommended by staff.

4.3 Proposed Resolution Confirming the Inclusion of CR&R 2025 Delinquent Solid Waste Charges on the County Property Tax Roll for FY 2026-2027

RECOMMENDATION:

Staff recommends that the City Council:

— 1. CONDUCT the Public Hearing;

— 2. ADOPT Resolution No. 4140, confirming the inclusion of CR&R 2025 Delinquent Solid Waste Charges on the County Property Tax Roll for FY 2026-2027;

— 3. DETERMINE the amount of delinquent, unpaid residential solid waste charges billed during calendar year 2025;

— 4. DETERMINE that the delinquent charges constitute a special assessment and lien against the affected parcels; and

— 5. DIRECT that the delinquent charges be collected on the Riverside County secured property tax roll for FY 2026–2027.

4.4 Proposed Resolution Confirming the Collection and Assessment of Time and Materials Charges Associated with Unpaid Nuisance Abatement Actions and Administrative Citations for Inclusion on the County Property Tax Roll for FY 2026-2027

RECOMMENDATION:

Staff recommends that the City Council:

— 1. CONDUCT the Public Hearing;

— 2. ADOPT Resolution No. 4139, confirming the collection and assessment of time and materials charges associated with unpaid nuisance abatement actions and administrative citations for inclusion on the County Property Tax Roll for FY 2026-2027;

— 3. DETERMINE the time and materials charges associated with unpaid nuisance abatement actions and administrative citations;

— 4. DETERMINE that these charges constitute a special assessment and lien against the affected parcels; and

— 5. DIRECT that the confirmed charges be included on the Riverside County secured property tax roll for FY 2026–2027.

5. CITY MANAGER UPDATE

6. FUTURE REQUESTS FROM CITY COUNCIL TO CITY MANAGER

7. ADJOURNMENT

DOCUMENTS RELATED TO OPEN SESSION AGENDAS (SB343) - Any public record, relating to an open session agenda item, that is distributed within 72 hours prior to the meeting is available for public inspection at the public counter located in the Administration Building of City Hall, 595 S. San Jacinto Avenue, San Jacinto, CA 92583.

I, Julia Espinoza, City Clerk of the City of San Jacinto, do hereby certify that I caused to be posted the foregoing agenda this July 16, 2026 as requested by law.

_____

Julia Espinoza, City Clerk

Proclamation

Of The City of San Jacinto

Faith & Freedom 250

***WHEREAS**, the year 2026 marks the 250th anniversary of the Declaration of Independence, commemorating the founding of the United States of America and the enduring principles of liberty, equality, justice, and self-government upon which our nation was established; and*

***WHEREAS,** Faith & Freedom 250 is a nationwide educational and commemorative initiative recognizing this historic milestone by encouraging Americans to reflect upon the principles, sacrifices, and convictions that have shaped our nation's journey over the past 250 years; and*

***WHEREAS**, the Faith & Freedom 250 initiative includes Faith & Freedom Week, observed from June 28 through July 6, 2026, and promotes historical understanding, constitutional literacy, civic engagement, national unity, and thoughtful reflection on the relationship between faith, freedom, justice, responsibility, and national renewal; and*

***WHEREAS,** Faith & Freedom 250 seeks to bring together communities, educators, civic organizations, veterans, elected officials, faith-based organizations, and citizens in recognizing America's heritage while encouraging civic responsibility, mutual respect, service to others, and a shared commitment to the common good; and*

***WHEREAS**, the City of San Jacinto recognizes the importance of commemorating our nation's Semiquincentennial by honoring the sacrifices and contributions of those who have shaped our nation's history and by encouraging future generations to remain informed, engaged, and committed to preserving the ideals of liberty, justice, and self-government.*

***NOW THEREFORE,** the City Council of the City of San Jacinto does hereby proclaim June 28, 2026, as Faith & Freedom 250 Day in the City of San Jacinto and encourages all residents to commemorate this historic observance by reflecting upon our nation's history, honoring the enduring principles of liberty, justice, responsibility, and unity, and renewing their commitment to civic engagement, service, and the continued strength of our community and nation.*

July 21, 2026

TO:	City Council
REQUESTED BY:	Tom Prill, Deputy City Manager
APPROVED BY:	Travis Randel, Interim City Manager
SUBJECT:	Treasurer's Report at April 30, 2026

RECOMMENDATION:

Staff recommends that the City Council **RECEIVE** and **FILE** the Treasurer's Report for the month ending April 30, 2026.

BACKGROUND:

The Treasurer's Report is required to be presented to the governing body at least quarterly in accordance with California Government Code Section 53600 et. seq.

DISCUSSION:

Total Cash and City Investments decreased 0.24% during the month. This includes cash, cash in bank, and cash with trustee.

The attached Treasurer's report is a "snapshot" report of our cash position on the last day of the month in all of our accounts. A section demonstrating compliance with the adopted Investment Policy and a chart depicting historical interest rates for certain positions is also included. Detailed statements of investments from Chandler Asset Management and Public Trust Advisors have also been included.

FISCAL IMPACT:

None.

Chandler Asset Management, Inc. ("Chandler") is an SEC registered investment adviser. For additional information about our firm, please see our current disclosures (Form ADV). To obtain a copy of our current disclosures, you may contact your client service representative by calling the number on the front of this statement or you may visit our website at www.chandlerasset.com.

Information contained in this monthly statement is confidential and is provided for informational purposes only and should not be construed as specific investment or legal advice. The information contained herein was obtained from sources believed to be reliable as of the date of this statement, but may become outdated or superseded at any time without notice.

Custody: Your qualified custodian bank maintains control of all assets reflected in this statement and we urge you to compare this statement to the one you receive from your qualified custodian. Chandler does not have any authority to withdraw or deposit funds from/to the custodian account.

Valuation: Prices are provided by IDC, an independent pricing source. In the event IDC does not provide a price or if the price provided is not reflective of fair market value, Chandler will obtain pricing from an alternative approved third party pricing source in accordance with our written valuation policy and procedures. Our valuation procedures are also disclosed in Item 5 of our Form ADV Part 2A.

Performance: Performance results are presented gross-of-advisory fees and represent the client's Total Return. The deduction of advisory fees lowers performance results. These results include the reinvestment of dividends and other earnings. Past performance may not be indicative of future results. Therefore, clients should not assume that future performance of any specific investment or investment strategy will be profitable or equal to past performance levels. All investment strategies have the potential for profit or loss. Economic factors, market conditions or changes in investment strategies, contributions or withdrawals may materially alter the performance and results of your portfolio.

Source ICE Data Indices, LLC ("ICE"), used with permission. ICE PERMITS USE OF THE ICE INDICES AND RELATED DATA ON AN "AS IS" BASIS; ICE, ITS AFFILIATES AND THEIR RESPECTIVE THIRD PARTY SUPPLIERS DISCLAIM ANY AND ALL WARRANTIES AND REPRESENTATIONS, EXPRESS AND/OR IMPLIED, INCLUDING ANY WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE, INCLUDING THE INDICES, INDEX DATA AND ANY DATA INCLUDED IN, RELATED TO, OR DERIVED THEREFROM. NEITHER ICE DATA, ITS AFFILIATES OR THEIR RESPECTIVE THIRD PARTY PROVIDERS GUARANTEE THE QUALITY, ADEQUACY, ACCURACY, TIMELINESS OR COMPLETENESS OF THE INDICES OR THE INDEX DATA OR ANY COMPONENT THEREOF, AND THE INDICES AND INDEX DATA AND ALL COMPONENTS THEREOF ARE PROVIDED ON AN "AS IS" BASIS AND LICENSEE'S USE IS AT LICENSEE'S OWN RISK. ICE DATA, ITS AFFILIATES AND THEIR RESPECTIVE THIRD PARTY DO NOT SPONSOR, ENDORSE, OR RECOMMEND CHANDLER, OR ANY OF ITS PRODUCTS OR SERVICES.

Index returns assume reinvestment of all distributions. Historical performance results for investment indexes generally do not reflect the deduction of transaction and/or custodial charges or the deduction of an investment management fee, the incurrence of which would have the effect of decreasing historical performance results. It is not possible to invest directly in an index.

Ratings: Ratings information have been provided by Moody's, S&P and Fitch through data feeds we believe to be reliable as of the date of this statement, however we cannot guarantee its accuracy.

Security level ratings for U.S. Agency issued mortgage-backed securities ("MBS") reflect the issuer rating because the securities themselves are not rated. The issuing U.S. Agency guarantees the full and timely payment of both principal and interest.

LGIP Yields: Reported yields for local government investment pools may be presented as either the 30-day yield or the monthly distribution yield, as applicable. For certain funds, the 30-day yield is calculated using reported daily yield data. Yield calculations are subject to change and may not be directly comparable across funds.

LAIF Yields: Additional Disclosure for CA Clients - As a result of a reporting lag from the Local Agency Investment Fund (LAIF), reported LAIF yields represent the most recently available Daily Effective Yield and may reflect data from approximately 7–10 days prior to month-end.

Benchmark	Disclosure
ICE BofA 1-5 Yr US Treasury & Agency Index	The ICE BofA 1-5 Year US Treasury & Agency Index tracks the performance of US dollar denominated US Treasury and nonsubordinated US agency debt issued in the US domestic market. Qualifying securities must have an investment grade rating (based on an average of Moody's, S&P and Fitch). Qualifying securities must have at least one year remaining term to final maturity and less than five years remaining term to final maturity, at least 18 months to maturity at time of issuance, a fixed coupon schedule, and a minimum amount outstanding of $1 billion for sovereigns and $250 million for agencies.

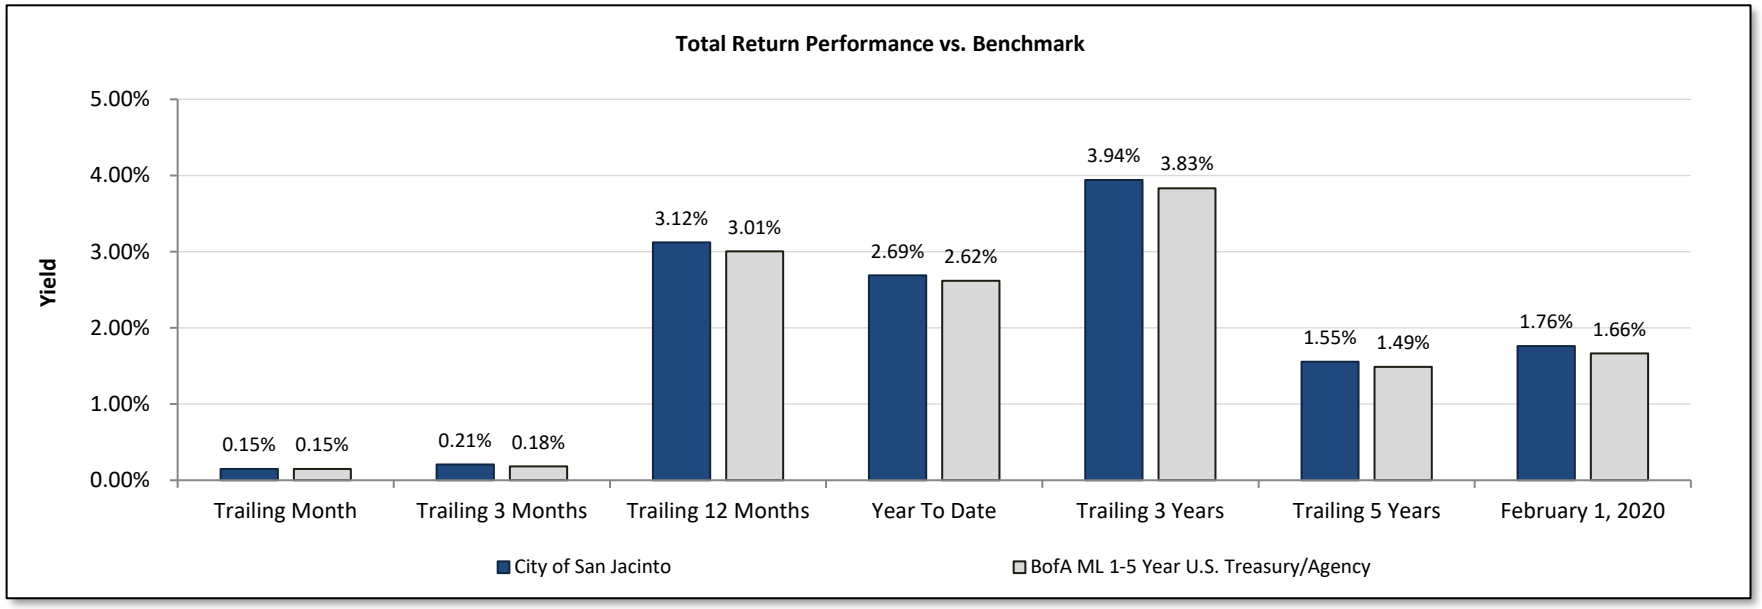
City of San Jacinto	April 2026 Net Income
Interest Income	$ 30,829.04
Net Amortization/Accretion	8,673.31
Net Realized Gain/Loss[3]	(4,522.41)
Miscellaneous Income	-
Net Income	**$ 34,979.94**

(1) Payables represent amounts due to settle security transactions that have been executed but have not settled as of period end. The funds used to settle these trades may come from a variety of sources including cash within the portfolio, proceeds from future security transactions including maturities and sales, or other sources including money market funds. For reporting purposes, a payable is created for over-period settlements which are reflected in the detailed holdings.



(2) Market Value Plus Accrued Net represents the market value of the portfolio net payables and recievables from transactions that settle in the following reporting period.

(3) MBS paydowns may result in negative realized losses rather than amortization in as a result of accounting method.

Additional Disclosure

This information is for the sole purposes of the client and is not intended to provide specific advice or recommendations. Please review the contents of this information carefully. Should you have any questions regarding the information presented, calculation methodology, investment portfolio, security detail, or any other facet of this information, please feel free to contact us.

Public Trust Advisors, LLC (Public Trust) statements and reports are intended to detail our investment advisory activity as well as the activity of certain client accounts managed by Public Trust. The custodian bank maintains the control of assets and executes and settles all investment transactions. The custodian statement is the official record of security and cash holdings transactions. Public Trust recognizes that clients may use these reports to facilitate record keeping; therefore, it is recommended that the client reconcile this information with their custodian bank statement. Many custodians use a settlement date basis that may result in the need to reconcile due to a timing difference. The underlying market value, amortized cost, and accrued interest may differ between the custodian and this statement or report. This can be attributed to differences in calculation methodologies and pricing sources used.

Public Trust does not have the authority to withdraw funds from or deposit funds to the custodian. Our clients retain responsibility for their internal accounting policies, implementing and enforcing internal controls, and generating ledger entries or otherwise recording transactions. The total market value represents prices obtained from various sources; it may be impacted by the frequency at which prices are reported, and such prices are not guaranteed. Prices received from pricing vendors are generally based on current market quotes but when such quotes are not available, the pricing vendors use a variety of techniques to estimate value. These estimates, particularly for fixed-income securities, may be based on certain minimum principal amounts (e.g. $1 million) and may not reflect all the factors that affect the value of the security including liquidity risk. The prices provided are not firm bids or offers. Certain securities may reflect N/A or unavailable where the price for such security is generally not available from a pricing source. The market value of a security, including those priced at par value, may differ from its purchase price and may not closely reflect the value at which the security may be sold or purchased based on various market factors. The securities in this investment portfolio, including shares of mutual funds, are not guaranteed or otherwise protected by Public Trust, the FDIC (except for certain non-negotiable certificates of deposit), or any government agency unless specifically stated otherwise.

Clients may be permitted to establish one or more unmanaged accounts for the purposes of client reporting. Clients may also be permitted to provide externally managed assets for the purposes of client reporting. Public Trust defines unmanaged accounts or assets as one where the investment direction remains the sole responsibility of the client rather than the Investment Manager. Unmanaged accounts or external assets do not receive ongoing supervision and monitoring services. The Investment Manager does not make any investment recommendations and may not charge a fee for reporting on these accounts or assets. The primary purpose for this service is to include unmanaged accounts or assets owned by the client in the performance reports provided by the Investment Manager. The Investment Manager assumes no liability for the underlying performance of any unmanaged accounts or assets, and it is the client's sole responsibility for the accuracy or correctness of any such performance.

Beginning and ending balances are based on market value plus accrued interest on a trade date basis. Statements and reports made available to the end user either from Public Trust or through the online reporting platform may present information and portfolio analytics using various optional methods including, but not limited to, historical cost, amortized cost, and market value. All information is assumed to be correct, but the accuracy has not been confirmed and therefore is not guaranteed to be correct. Information is obtained from third party sources that may or may not be verified. The data in this report is unaudited and is only applicable for the date denoted on the report. Market values may change day-to-day based on numerous circumstances such as trading volume, news released about the underlying issuer, issuer performance, etc. Underlying market values may be priced via numerous aspects as certain securities are short term in nature and not readily traded. Performance results are shown net of all fees and expenses and reflect the reinvestment of dividends and other earnings.

Many factors affect performance including changes in market conditions and interest rates and in response to other economic, political, or financial developments. Investment involves risk including the possible loss of principal. No assurance can be given that the performance objectives of a given strategy will be achieved. Past performance is no guarantee of future results. Any financial and/or investment decision may incur losses.

The investment advisor providing these services is Public Trust Advisors, LLC, an investment adviser registered with the U.S. Securities and Exchange Commission (SEC) under the Investment Advisers Act of 1940, as amended. Registration with the SEC does not imply a certain level of skill or training. Public Trust is required to maintain a written disclosure brochure of our background and business experience. If you would like to receive a copy of our current disclosure brochure, Privacy Policy, or Code of Ethics, or have any questions regarding your account please contact us.

Additional Disclosure:

This information is for the sole purposes of the client and is not intended to provide specific advice or recommendations. Please review the contents of this information carefully. Should you have any questions regarding the information presented, calculation methodology, investment portfolio, security detail, or any other facet of this information, please feel free to contact us.

Public Trust Advisors, LLC (Public Trust) statements and reports are intended to detail our investment advisory activity as well as the activity of certain client accounts managed by Public Trust. The custodian bank maintains the control of assets and executes and settles all investment transactions. The custodian statement is the official record of security and cash holdings transactions. Public Trust recognizes that clients may use these reports to facilitate record keeping; therefore, it is recommended that the client reconcile this information with their custodian bank statement. Many custodians use a settlement date basis that may result in the need to reconcile due to a timing difference. The underlying market value, amortized cost, and accrued interest may differ between the custodian and this statement or report. This can be attributed to differences in calculation methodologies and pricing sources used.

Public Trust does not have the authority to withdraw funds from or deposit funds to the custodian. Our clients retain responsibility for their internal accounting policies, implementing and enforcing internal controls, and generating ledger entries or otherwise recording transactions. The total market value represents prices obtained from various sources; it may be impacted by the frequency at which prices are reported, and such prices are not guaranteed. Prices received from pricing vendors are generally based on current market quotes but when such quotes are not available, the pricing vendors use a variety of techniques to estimate value. These estimates, particularly for fixed-income securities, may be based on certain minimum principal amounts (e.g. $1 million) and may not reflect all the factors that affect the value of the security including liquidity risk. The prices provided are not firm bids or offers. Certain securities may reflect N/A or unavailable where the price for such security is generally not available from a pricing source. The market value of a security, including those priced at par value, may differ from its purchase price and may not closely reflect the value at which the security may be sold or purchased based on various market factors. The securities in this investment portfolio, including shares of mutual funds, are not guaranteed or otherwise protected by Public Trust, the FDIC (except for certain non-negotiable certificates of deposit), or any government agency unless specifically stated otherwise.

Clients may be permitted to establish one or more unmanaged accounts for the purposes of client reporting. Clients may also be permitted to provide externally managed assets for the purposes of client reporting. Public Trust defines unmanaged accounts or assets as one where the investment direction remains the sole responsibility of the client rather than the Investment Manager. Unmanaged accounts or external assets do not receive ongoing supervision and monitoring services. The Investment Manager does not make any investment recommendations and may not charge a fee for reporting on these accounts or assets. The primary purpose for this service is to include unmanaged accounts or assets owned by the client in the performance reports provided by the Investment Manager. The Investment Manager assumes no liability for the underlying performance of any unmanaged accounts or assets, and it is the client's sole responsibility for the accuracy or correctness of any such performance.

Beginning and ending balances are based on market value plus accrued interest on a trade date basis. Statements and reports made available to the end user either from Public Trust or through the online reporting platform may present information and portfolio analytics using various optional methods including, but not limited to, historical cost, amortized cost, and market value. All information is assumed to be correct, but the accuracy has not been confirmed and therefore is not guaranteed to be correct. Information is obtained from third party sources that may or may not be verified. The data in this report is unaudited and is only applicable for the date denoted on the report. Market values may change day-to-day based on numerous circumstances such as trading volume, news released about the underlying issuer, issuer performance, etc. Underlying market values may be priced via numerous aspects as certain securities are short term in nature and not readily traded. Performance results are shown net of all fees and expenses and reflect the reinvestment of dividends and other earnings.

Many factors affect performance including changes in market conditions and interest rates and in response to other economic, political, or financial developments. Investment involves risk including the possible loss of principal. No assurance can be given that the performance objectives of a given strategy will be achieved. Past performance is no guarantee of future results. Any financial and/or investment decision may incur losses.

The investment advisor providing these services is Public Trust Advisors, LLC, an investment adviser registered with the U.S. Securities and Exchange Commission (SEC) under the Investment Advisers Act of 1940, as amended. Registration with the SEC does not imply a certain level of skill or training. Public Trust is required to maintain a written disclosure brochure of our background and business experience. If you would like to receive a copy of our current disclosure brochure, Privacy Policy, or Code of Ethics, or have any questions regarding your account please contact us.

Public Trust Advisors
717 17th St. Suite 1850
Denver, CO 80202

July 21, 2026

TO:	City Council
REQUESTED BY:	Tom Prill, Deputy City Manager
APPROVED BY:	Travis Randel, Interim City Manager
SUBJECT:	Treasurer's Report at May 31, 2026

RECOMMENDATION:

Staff recommends that the City Council **RECEIVE** and **FILE** the Treasurer's Report for the month ending May 31, 2026.

BACKGROUND:

The Treasurer's Report is required to be presented to the governing body at least quarterly in accordance with California Government Code Section 53600 et. seq.

DISCUSSION:

Total Cash and City Investments increased 7.45% during the month. This includes cash, cash in bank, and cash with trustee.

The attached Treasurer's report is a "snapshot" report of our cash position on the last day of the month in all of our accounts. A section demonstrating compliance with the adopted Investment Policy and a chart depicting historical interest rates for certain positions is also included. Detailed statements of investments from Chandler Asset Management and Public Trust Advisors have also been included.

FISCAL IMPACT:

None.

Chandler Asset Management, Inc. ("Chandler") is an SEC registered investment adviser. For additional information about our firm, please see our current disclosures (Form ADV). To obtain a copy of our current disclosures, you may contact your client service representative by calling the number on the front of this statement or you may visit our website at www.chandlerasset.com.

Information contained in this monthly statement is confidential and is provided for informational purposes only and should not be construed as specific investment or legal advice. The information contained herein was obtained from sources believed to be reliable as of the date of this statement, but may become outdated or superseded at any time without notice.

Custody: Your qualified custodian bank maintains control of all assets reflected in this statement and we urge you to compare this statement to the one you receive from your qualified custodian. Chandler does not have any authority to withdraw or deposit funds from/to the custodian account.

Valuation: Prices are provided by IDC, an independent pricing source. In the event IDC does not provide a price or if the price provided is not reflective of fair market value, Chandler will obtain pricing from an alternative approved third party pricing source in accordance with our written valuation policy and procedures. Our valuation procedures are also disclosed in Item 5 of our Form ADV Part 2A.

Performance: Performance results are presented gross-of-advisory fees and represent the client's Total Return. The deduction of advisory fees lowers performance results. These results include the reinvestment of dividends and other earnings. Past performance may not be indicative of future results. Therefore, clients should not assume that future performance of any specific investment or investment strategy will be profitable or equal to past performance levels. All investment strategies have the potential for profit or loss. Economic factors, market conditions or changes in investment strategies, contributions or withdrawals may materially alter the performance and results of your portfolio.

Source ICE Data Indices, LLC ("ICE"), used with permission. ICE PERMITS USE OF THE ICE INDICES AND RELATED DATA ON AN "AS IS" BASIS; ICE, ITS AFFILIATES AND THEIR RESPECTIVE THIRD PARTY SUPPLIERS DISCLAIM ANY AND ALL WARRANTIES AND REPRESENTATIONS, EXPRESS AND/OR IMPLIED, INCLUDING ANY WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE, INCLUDING THE INDICES, INDEX DATA AND ANY DATA INCLUDED IN, RELATED TO, OR DERIVED THEREFROM. NEITHER ICE DATA, ITS AFFILIATES OR THEIR RESPECTIVE THIRD PARTY PROVIDERS GUARANTEE THE QUALITY, ADEQUACY, ACCURACY, TIMELINESS OR COMPLETENESS OF THE INDICES OR THE INDEX DATA OR ANY COMPONENT THEREOF, AND THE INDICES AND INDEX DATA AND ALL COMPONENTS THEREOF ARE PROVIDED ON AN "AS IS" BASIS AND LICENSEE'S USE IS AT LICENSEE'S OWN RISK. ICE DATA, ITS AFFILIATES AND THEIR RESPECTIVE THIRD PARTY DO NOT SPONSOR, ENDORSE, OR RECOMMEND CHANDLER, OR ANY OF ITS PRODUCTS OR SERVICES.

Index returns assume reinvestment of all distributions. Historical performance results for investment indexes generally do not reflect the deduction of transaction and/or custodial charges or the deduction of an investment management fee, the incurrence of which would have the effect of decreasing historical performance results. It is not possible to invest directly in an index.

Ratings: Ratings information have been provided by Moody's, S&P and Fitch through data feeds we believe to be reliable as of the date of this statement, however we cannot guarantee its accuracy.

Security level ratings for U.S. Agency issued mortgage-backed securities ("MBS") reflect the issuer rating because the securities themselves are not rated. The issuing U.S. Agency guarantees the full and timely payment of both principal and interest.

LGIP Yields: Reported yields for local government investment pools may be presented as either the 30-day yield or the monthly distribution yield, as applicable. For certain funds, the 30-day yield is calculated using reported daily yield data. Yield calculations are subject to change and may not be directly comparable across funds.

LAIF Yields: Additional Disclosure for CA Clients - As a result of a reporting lag from the Local Agency Investment Fund (LAIF), reported LAIF yields represent the most recently available Daily Effective Yield and may reflect data from approximately 7–10 days prior to month-end.

Benchmark	Disclosure
ICE BofA 1-5 Yr US Treasury & Agency Index	The ICE BofA 1-5 Year US Treasury & Agency Index tracks the performance of US dollar denominated US Treasury and nonsubordinated US agency debt issued in the US domestic market. Qualifying securities must have an investment grade rating (based on an average of Moody's, S&P and Fitch). Qualifying securities must have at least one year remaining term to final maturity and less than five years remaining term to final maturity, at least 18 months to maturity at time of issuance, a fixed coupon schedule, and a minimum amount outstanding of $1 billion for sovereigns and $250 million for agencies.

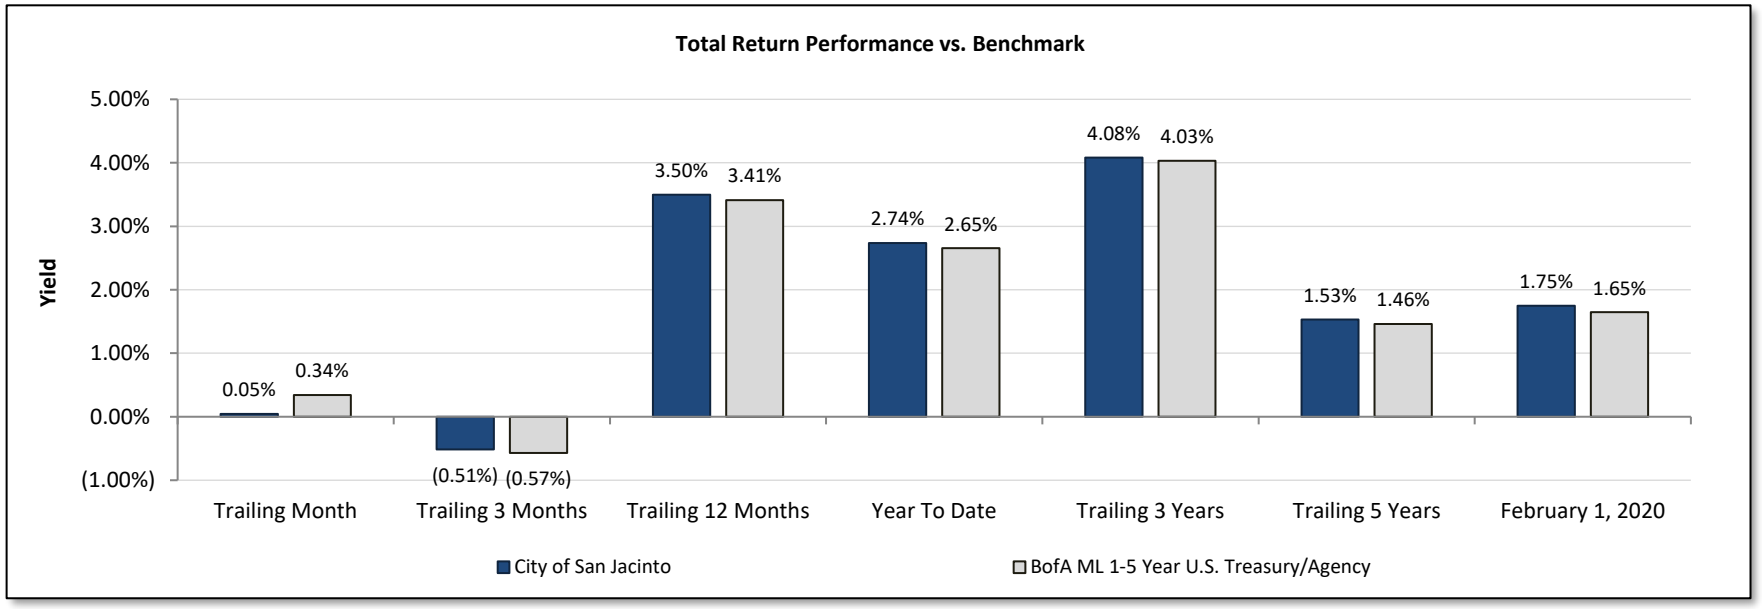
(1) Payables represent amounts due to settle security transactions that have been executed but have not settled as of period end. The funds used to settle these trades may come from a variety of sources including cash within the portfolio, proceeds from future security transactions including maturities and sales, or other sources including money market funds. For reporting purposes, a payable is created for over-period settlements which are reflected in the detailed holdings.



(2) Market Value Plus Accrued Net represents the market value of the portfolio net payables and recievables from transactions that settle in the following reporting period.

(3) MBS paydowns may result in negative realized losses rather than amortization in as a result of accounting method.

Additional Disclosure

This information is for the sole purposes of the client and is not intended to provide specific advice or recommendations. Please review the contents of this information carefully. Should you have any questions regarding the information presented, calculation methodology, investment portfolio, security detail, or any other facet of this information, please feel free to contact us.

Public Trust Advisors, LLC (Public Trust) statements and reports are intended to detail our investment advisory activity as well as the activity of certain client accounts managed by Public Trust. The custodian bank maintains the control of assets and executes and settles all investment transactions. The custodian statement is the official record of security and cash holdings transactions. Public Trust recognizes that clients may use these reports to facilitate record keeping; therefore, it is recommended that the client reconcile this information with their custodian bank statement. Many custodians use a settlement date basis that may result in the need to reconcile due to a timing difference. The underlying market value, amortized cost, and accrued interest may differ between the custodian and this statement or report. This can be attributed to differences in calculation methodologies and pricing sources used.

Public Trust does not have the authority to withdraw funds from or deposit funds to the custodian. Our clients retain responsibility for their internal accounting policies, implementing and enforcing internal controls, and generating ledger entries or otherwise recording transactions. The total market value represents prices obtained from various sources; it may be impacted by the frequency at which prices are reported, and such prices are not guaranteed. Prices received from pricing vendors are generally based on current market quotes but when such quotes are not available, the pricing vendors use a variety of techniques to estimate value. These estimates, particularly for fixed-income securities, may be based on certain minimum principal amounts (e.g. $1 million) and may not reflect all the factors that affect the value of the security including liquidity risk. The prices provided are not firm bids or offers. Certain securities may reflect N/A or unavailable where the price for such security is generally not available from a pricing source. The market value of a security, including those priced at par value, may differ from its purchase price and may not closely reflect the value at which the security may be sold or purchased based on various market factors. The securities in this investment portfolio, including shares of mutual funds, are not guaranteed or otherwise protected by Public Trust, the FDIC (except for certain non-negotiable certificates of deposit), or any government agency unless specifically stated otherwise.

Clients may be permitted to establish one or more unmanaged accounts for the purposes of client reporting. Clients may also be permitted to provide externally managed assets for the purposes of client reporting. Public Trust defines unmanaged accounts or assets as one where the investment direction remains the sole responsibility of the client rather than the Investment Manager. Unmanaged accounts or external assets do not receive ongoing supervision and monitoring services. The Investment Manager does not make any investment recommendations and may not charge a fee for reporting on these accounts or assets. The primary purpose for this service is to include unmanaged accounts or assets owned by the client in the performance reports provided by the Investment Manager. The Investment Manager assumes no liability for the underlying performance of any unmanaged accounts or assets, and it is the client's sole responsibility for the accuracy or correctness of any such performance.

Beginning and ending balances are based on market value plus accrued interest on a trade date basis. Statements and reports made available to the end user either from Public Trust or through the online reporting platform may present information and portfolio analytics using various optional methods including, but not limited to, historical cost, amortized cost, and market value. All information is assumed to be correct, but the accuracy has not been confirmed and therefore is not guaranteed to be correct. Information is obtained from third party sources that may or may not be verified. The data in this report is unaudited and is only applicable for the date denoted on the report. Market values may change day-to-day based on numerous circumstances such as trading volume, news released about the underlying issuer, issuer performance, etc. Underlying market values may be priced via numerous aspects as certain securities are short term in nature and not readily traded. Performance results are shown net of all fees and expenses and reflect the reinvestment of dividends and other earnings.

Many factors affect performance including changes in market conditions and interest rates and in response to other economic, political, or financial developments. Investment involves risk including the possible loss of principal. No assurance can be given that the performance objectives of a given strategy will be achieved. Past performance is no guarantee of future results. Any financial and/or investment decision may incur losses.

The investment advisor providing these services is Public Trust Advisors, LLC, an investment adviser registered with the U.S. Securities and Exchange Commission (SEC) under the Investment Advisers Act of 1940, as amended. Registration with the SEC does not imply a certain level of skill or training. Public Trust is required to maintain a written disclosure brochure of our background and business experience. If you would like to receive a copy of our current disclosure brochure, Privacy Policy, or Code of Ethics, or have any questions regarding your account please contact us.

Additional Disclosure:

This information is for the sole purposes of the client and is not intended to provide specific advice or recommendations. Please review the contents of this information carefully. Should you have any questions regarding the information presented, calculation methodology, investment portfolio, security detail, or any other facet of this information, please feel free to contact us.

Public Trust Advisors, LLC (Public Trust) statements and reports are intended to detail our investment advisory activity as well as the activity of certain client accounts managed by Public Trust. The custodian bank maintains the control of assets and executes and settles all investment transactions. The custodian statement is the official record of security and cash holdings transactions. Public Trust recognizes that clients may use these reports to facilitate record keeping; therefore, it is recommended that the client reconcile this information with their custodian bank statement. Many custodians use a settlement date basis that may result in the need to reconcile due to a timing difference. The underlying market value, amortized cost, and accrued interest may differ between the custodian and this statement or report. This can be attributed to differences in calculation methodologies and pricing sources used.

Public Trust does not have the authority to withdraw funds from or deposit funds to the custodian. Our clients retain responsibility for their internal accounting policies, implementing and enforcing internal controls, and generating ledger entries or otherwise recording transactions. The total market value represents prices obtained from various sources; it may be impacted by the frequency at which prices are reported, and such prices are not guaranteed. Prices received from pricing vendors are generally based on current market quotes but when such quotes are not available, the pricing vendors use a variety of techniques to estimate value. These estimates, particularly for fixed-income securities, may be based on certain minimum principal amounts (e.g. $1 million) and may not reflect all the factors that affect the value of the security including liquidity risk. The prices provided are not firm bids or offers. Certain securities may reflect N/A or unavailable where the price for such security is generally not available from a pricing source. The market value of a security, including those priced at par value, may differ from its purchase price and may not closely reflect the value at which the security may be sold or purchased based on various market factors. The securities in this investment portfolio, including shares of mutual funds, are not guaranteed or otherwise protected by Public Trust, the FDIC (except for certain non-negotiable certificates of deposit), or any government agency unless specifically stated otherwise.

Clients may be permitted to establish one or more unmanaged accounts for the purposes of client reporting. Clients may also be permitted to provide externally managed assets for the purposes of client reporting. Public Trust defines unmanaged accounts or assets as one where the investment direction remains the sole responsibility of the client rather than the Investment Manager. Unmanaged accounts or external assets do not receive ongoing supervision and monitoring services. The Investment Manager does not make any investment recommendations and may not charge a fee for reporting on these accounts or assets. The primary purpose for this service is to include unmanaged accounts or assets owned by the client in the performance reports provided by the Investment Manager. The Investment Manager assumes no liability for the underlying performance of any unmanaged accounts or assets, and it is the client's sole responsibility for the accuracy or correctness of any such performance.

Beginning and ending balances are based on market value plus accrued interest on a trade date basis. Statements and reports made available to the end user either from Public Trust or through the online reporting platform may present information and portfolio analytics using various optional methods including, but not limited to, historical cost, amortized cost, and market value. All information is assumed to be correct, but the accuracy has not been confirmed and therefore is not guaranteed to be correct. Information is obtained from third party sources that may or may not be verified. The data in this report is unaudited and is only applicable for the date denoted on the report. Market values may change day-to-day based on numerous circumstances such as trading volume, news released about the underlying issuer, issuer performance, etc. Underlying market values may be priced via numerous aspects as certain securities are short term in nature and not readily traded. Performance results are shown net of all fees and expenses and reflect the reinvestment of dividends and other earnings.

Many factors affect performance including changes in market conditions and interest rates and in response to other economic, political, or financial developments. Investment involves risk including the possible loss of principal. No assurance can be given that the performance objectives of a given strategy will be achieved. Past performance is no guarantee of future results. Any financial and/or investment decision may incur losses.

The investment advisor providing these services is Public Trust Advisors, LLC, an investment adviser registered with the U.S. Securities and Exchange Commission (SEC) under the Investment Advisers Act of 1940, as amended. Registration with the SEC does not imply a certain level of skill or training. Public Trust is required to maintain a written disclosure brochure of our background and business experience. If you would like to receive a copy of our current disclosure brochure, Privacy Policy, or Code of Ethics, or have any questions regarding your account please contact us.

Denver, CO 80202

July 21, 2026

TO:	City Council
REQUESTED BY:	Tom Prill, Deputy City Manager
APPROVED BY:	Travis Randel, Interim City Manager
SUBJECT:	Resolution Approving San Jacinto Power 2026 Integrated Resource Plan

RECOMMENDATION:

Staff recommends that the City Council **ADOPT Resolution No. 4142**, approving the San Jacinto Power 2026 Integrated Resource Plan.

DISCUSSION:

The City's Community Choice Aggregation (CCA) Program, San Jacinto Power (SJP), was established by the City Council through the adoption of Ordinance 16-12 on December 6, 2016 and began serving customers in April 2018.

Senate Bill (SB) 350, approved by the Governor on October 7, 2015, added Public Utilities Code Section 454.52, which established the requirement for load-serving entities, including CCAs, to file an Integrated Resource Plan (IRP) with the California Public Utilities Commission (CPUC).

Applicable clean energy targets have been updated by subsequent legislation. SB 100 (De León, Chapter 312, Statutes of 2018) increased the Renewables Portfolio Standard (RPS) to 60% by 2030 and established the goal of 100% clean electricity by 2045. SB 1020 (Laird, Chapter 361, Statutes of 2022) added binding interim milestones of 90% clean electricity by 2035 and 95% by 2040. AB 1279 (2022) codified the 2045 statewide carbon neutrality goal. The 2026 IRP reflects this full statutory trajectory.

The IRP establishes a 10-year forward-looking procurement plan and does not commit SJP to specific procurement transactions. The San Jacinto City Council approved its most recent IRP in October 2022. The CPUC consolidated the subsequent planning cycle into a 2024–2026 cycle — completing its Preferred System Plan work in 2024 before opening a new rulemaking in 2025 — and did not require individual Load Serving Entities (LSE) plan filings until 2026. The 2026 IRP now before the City Council is the current required biennial update under that cycle.

California Choice Energy Authority and its energy procurement consultant, on behalf of SJP, prepared the 2026 IRP in accordance with CPUC requirements. The filing consists of three required documents: a Narrative Template, a Resource Data Template (RDT), and a Clean System Power (CSP) Calculator. Consistent with 2026 filing requirements, the IRP identifies SJP's Preferred Conforming Portfolio — a supply plan demonstrating SJP's proportional share of California's statewide greenhouse gas reduction target of 8 million metric tons (MMT) by 2045. A complete copy of the IRP Narrative is on file in the office of the Deputy City Manager and will be posted to the SJP website. The RDT and CSP Calculator contain contract-level detail and are filed with the CPUC under protective order.

Pending City Council's approval, SJP's IRP will be submitted to the CPUC by the due date of August 10, 2026.

FISCAL IMPACT:

None.

STATE OF CALIFORNIA)
COUNTY OF RIVERSIDE) ss
CITY OF SAN JACINTO)

RESOLUTION NO. 4142

RESOLUTION OF THE CITY COUNCIL OF THE CITY OF SAN JACINTO APPROVING THE SAN JACINTO POWER 2026 INTEGRATED RESOURCE PLAN

WHEREAS, Community Choice Aggregation, authorized by Assembly Bill 117, is a state law that allows cities, counties, and other authorized entities to aggregate electricity demand within their jurisdictions in order to purchase and/or generate alternative energy supplies for residents and businesses within their jurisdiction while maintaining the existing electricity provider for transmission and distribution service; and

WHEREAS, on December 6, 2016, City Council adopted Ordinance 16-12, Establishing a Community Choice Aggregation program, San Jacinto Power; and

WHEREAS, minor technical, formatting, or clerical corrections to the Integrated Resource Plan may be necessary prior to filing with the California Public Utilities Commission, and the City Council desires to authorize such non-substantive corrections without requiring further Council action; and

WHEREAS, Senate Bill (SB) 350, approved October 7, 2015, added Public Utilities Code Section 454.52, establishing a requirement for Community Choice Aggregation Programs to develop an Integrated Resource Plan and submit it to the California Public Utilities Commission (CPUC) for certification; and

WHEREAS, subsequent legislation has updated the clean energy requirements applicable to the SJP Integrated Resource Plan, including SB 100 (De León, Chapter 312, Statutes of 2018), which established a goal of 60% renewable energy by 2030 and 100% clean electricity by 2045; SB 1020 (Laird, Chapter 361, Statutes of 2022), which added binding interim milestones of 90% clean electricity by 2035 and 95% by 2040; and AB 1279 (2022), which codified the 2045 statewide carbon neutrality goal; and

WHEREAS, the CPUC's IRP planning cycle was consolidated into a 2024–2026 cycle, with individual load-serving entity plan filings due in 2026 under CPUC Rulemaking R.25-06-019; the last SJP IRP was approved by the City Council in October 2022, and the 2026 IRP is the current required biennial update under that consolidated cycle; and

WHEREAS, California Choice Energy Authority and its energy procurement consultant have prepared the SJP 2026 Integrated Resource Plan in accordance with CPUC requirements, including the preparation of a Narrative Template, Resource Data Template, and Clean System Power Calculator, and the identification of SJP's Preferred Conforming Portfolio consistent with California's statewide greenhouse gas reduction goals.

NOW THEREFORE, BE IT RESOLVED, determined and ordered by the City Council of the City of San Jacinto, California, as follows:

SECTION 1. The foregoing recitals are true and correct.

SECTION 2. That the Integrated Resource Plan for San Jacinto Power has been developed in compliance with Senate Bill 350, Senate Bill 100, Senate Bill 1020, Assembly Bill 1279, and California Public Utilities Commission direction under Rulemaking R.25-06-019, and is hereby approved.

SECTION 3. This resolution shall take effect immediately upon its adoption.

PASSED, APPROVED, and ADOPTED at a Regular Meeting of the City Council on the 21st day of July, 2026, by the following vote:

AYES:

I. Introduction and Executive Summary

Description of SJP

The City of San Jacinto is a municipal corporation and charter city organized and operated under the laws of the State of California. The City of San Jacinto is governed by, and accountable to, representatives elected by its citizens. The City of San Jacinto operates numerous programs for the benefit of its citizens, including San Jacinto Power ("SJP").

SJP was formed by the San Jacinto City Council on December 6, 2016, through Ordinance 16-12 and began serving load in April 2018. SJP currently provides retail electric generation services and complementary energy programs to customers within the municipal boundaries of the City of San Jacinto. SJP launched as the City's Community Choice Aggregation ("CCA") program for the purposes of promoting local control and local economic benefits as well as offering participating customers competitive and stable rates.

Figure 1: Service Area Map

SJP currently serves approximately 14,100 residential accounts and 1,600 commercial and industrial accounts. SJP provides retail generation service to a variety of customer classes, including residential, small and medium commercial accounts, large industrial consumers, and agricultural and pumping facilities. SJP's service area has a population of approximately 56,174, the majority of which live in households or work at businesses that receive generation service from SJP. In 2025, SJP had a peak load of 65 MW, and a total energy usage of 162 GWh.

SJP has pursued CCA implementation activities under a shared service model, which means SJP has joined together with other, regionally located and city specific CCA programs to promote administrative efficiencies by outsourcing many operational and technical services typically required for CCA

administration and operation. The California Choice Energy Authority, or CalChoice, is the organization selected by SJP to provide requisite services, including resource planning and procurement activities. Key decisions of SJP, including rate setting, retail supply portfolio composition, disposition of financial reserves, and administration of complementary programs, are addressed by the San Jacinto City Council with supporting input from SJP staff and CalChoice personnel. Due to the relatively small size of the City of San Jacinto (both in terms of population and retail sales), meaningful San Jacinto administrative efficiencies have been achieved through joint solicitation/procurement administration through CalChoice. By partnering with CalChoice, SJP has been able to establish and pursue objectives and key parameters that are directly responsive to the unique constituents and interests within the City of San Jacinto.

SJP's Mission

SJP was formed for the express purpose of empowering the city to choose the generation resources that reflect its specific values, needs and cost preferences. More specifically, SJP seeks to provide reliable electric service, within the city, at competitive rates when compared to those rates offered by the incumbent electric utility and also prioritizes local control, economic development and environmental stewardship within the City of San Jacinto. Consistent with Public Utilities Code Sections 366.2(a)(5) and 454.52 (b)(3),[1] all procurement by SJP, including the portfolios set forth in this Integrated Resource Plan ("IRP"), must comply with policy direction provided from SJP's governing board, which is comprised of the City of San Jacinto Council.

Introduction to SJP's IRP

In accordance with the requirements of California Public Utilities Code ("PUC") Sections 454.51 and 454.52 and California Public Utilities Commission ("Commission" or "CPUC") Decision ("D.") 18-02-018, D.22-02-004, *Administrative Law Judge's Ruling Setting Requirements for Individual Integrated Resource Plans Due June 1, 2026*,[2] *Email Ruling Granting Joint Request for Extension of Load Serving Entity ("LSE") Integrated Resource Plan ("IRP") Filings*,[3] and guidance provided by the Commission's Energy Division,[4] SJP is providing its LSE-specific IRP to the Commission for certification and use in the Commission's statewide planning process.

In addition to this narrative, SJP's IRP includes the following documents:

- SJP's Resource Data Template

[1] All further citations to statute are to the California Public Utilities Code unless otherwise noted.

[2] Rulemaking ("R.") 25-06-019, *Administrative Law Judge's Setting Requirements for Individual Integrated Resource Plans Due June 1, 2026,* issued on January 1, 2026 ("Final Load Forecast and GHG Benchmark Ruling"), January 16, 2026.

[3] R.25-06-019, *Email Ruling Granting Joint Request for Extension of Load Serving Entity ("LSE") Integrated Resource Plan ("IRP") Filings*, March 9, 2026.

[4] Energy Division Guidance can be accessed at: https://www.cpuc.ca.gov/-/media/cpuc-website/divisions/energy-division/documents/integrated-resource-plan-and-long-term-procurement-plan-irp-ltpp/2024-2026-irp-cycle-events-and-materials/updated-filing-requirements-overview-document.pdf.

- SJP's Clean System Power Calculator
- SJP's IRP Verification

Projecting resource needs over the planning horizon covered by the IRP is a fluid process and SJP expects changes over time. The future resources identified in SJP's IRP represent SJP's current good-faith projection of the resource mix that will be procured over the IRP planning horizon. Such projections are based on best available information regarding planning directives, SJP policy, resource availability and other key considerations. The resources identified in future iterations of SJP's IRP may change due to new information and evolving circumstances, and the ultimate resource mix that SJP actually procures (in future years) may differ from what is reflected in this plan due to a number of variables, including availability of supply, technology changes, price of supply, and/or other market or regulatory considerations.

Board Council Approval of IRP

In compliance with Public Utilities Code Section 454.52(b)(3), this IRP was formally submitted to the San Jacinto City Council for approval based on the IRP's compliance with Sections 454.51 and 454.52 (the "IRP Statute") and all relevant council-adopted procurement requirements of SJP's governing council. On [Date], the San Jacinto City Council issued a Resolution which formally approved this IRP and adopted SJP's Preferred Conforming Portfolio ("PCP"). SJP's Resolution also made the following determinations regarding SJP's PCP:

- SJP's PCP is expected to achieve economic, reliability, environmental, security, and other benefits and performance characteristics that are consistent with the goals set forth in Section 454.52(a)(1)(A-I).
- SJP's PCP includes a diversified procurement portfolio consisting of both short-term and long-term electricity and electricity-related and demand reduction products.
- SJP's PCP achieves the resource adequacy requirements established pursuant to Public Utilities Code Section 380.
- SJP's PCP is consistent with the procurement timing, resource mix, and operational attributes of the Commission's Preferred System Portfolio ("PSP").
- SJP's PCP is compliant with all SJP board-adopted procurement directives.

A copy of the final Resolution is available on the City's website.[5]

Request for Certification

SJP respectfully requests that the Commission certify this IRP.

As both the Legislature and the Commission have recognized, the Legislature has granted CCAs broad authority to procure resources on behalf of their respective customers, an authority limited only where "other generation procurement arrangements have been expressly authorized by statute."[6] Likewise, the Legislature has granted CCAs autonomy in setting their own rates and managing interactions with their customers.[7] SJP understands that the Commission has three primary interests in the CCA IRP process:

- Ensuring that CCA IRPs provide requisite procurement information needed by the Commission to develop its statewide plan.[8]

- Ensuring that CCAs' current and planned procurement is consistent with the RA requirements established pursuant to PUC Section 380.5.[9]

- Ensuring that CCAs' current and planned procurement satisfies the CCA's share of renewables integration resources identified in the Commission's PSP, and that the CCA either self-provides or pays for investor-owned utility ("IOU") procurement to support its share of any renewable integration shortfall.[10]

SJP has prepared its IRP with these interests in mind, and thanks the Commission for recognizing and preserving CCA procurement autonomy as well as the benefits of a collaborative planning approach with CCA organizations in its certification review of SJP's IRP.

This narrative provides a detailed description of the development and content of SJP's PCPs, each portfolio's compliance with applicable requirements, and an action plan detailing SJP's next steps (to promote conformance with such requirements).

SJP developed its IRP through the following steps:

- SJP compiled data for its existing energy contracts, RA capacity contracts, and its share of capacity for allocated Cost Allocation Mechanism ("CAM") resources.
- For each IRP planning year, SJP identified its short positions relative to known planning targets and its assigned load forecast.
- SJP populated the Resource Data Template with all current contracts.
- SJP compiled detailed information on projects for which it is currently negotiating power purchase agreements, including information regarding project status and timing
- SJP identified future contracts it expects to secure for new solar, storage, geothermal, and wind generation. SJP prioritized the selection of future resources to ensure that SJP's overall portfolio of new resources is varied, meets all regulatory goals, meets the goals expressed by SJP's City Council, and is estimated to minimize costs to customers, subject to applicable mandates. SJP added generic future contracts with existing resources, including large hydroelectric generators, to help fill its remaining open positions.
- SJP used the Commission's Clean System Power Calculator Tool to check the GHG emissions associated with the resulting portfolio to ensure that these emissions are equivalent to, or slightly less than, SJP's assigned share of the GHG emissions benchmarks; SJP added planned purchases of RPS qualifying renewable and large hydroelectric energy in sufficient volume to ensure that portfolio emissions were equal to, or slightly less than, SJP's assigned share of the GHG benchmark.
- SJP identified the resulting portfolio as its PCP

SJP reached the following findings regarding its PCP:

- SJP's PCP includes the procurement of the following new resources:
    - New solar resources totaling 62 MW solar
    - New battery storage resources totaling 55 MW
    - New wind resources totaling 21 MW
    - New geothermal resources totaling 4 MW
- SJP's PCP provides for the following overall resource mix in 2045:
    - 12 GWh of Large Hydro
    - 39 GWh of Geothermal
    - 68 GWh of Wind
    - 178 GWh of Solar
    - 96 MWh of Short Duration Battery Storage
    - 252 MWh of Long Duration Storage
    - 39 MW of Natural Gas/Baseload/Other (Capacity-Only)
- SJP's PCP conforms to the procurement timing, resource quantities, and general resource attributes identified in the PSP.

- SJP's PCP would have GHG emissions of 0.025 MMT, 0.018 MMT, 0.018 MMT, and 0.010 MMT in 2030, 2035, 2040, and 2045, respectively, which is equivalent to or less than SJP's assigned GHG benchmarks for those years.
- SJP's PCP meets all relevant reliability metrics.
- SJP's PCP provides approximately SJP's load-proportional share of renewable integration resources.

II. Study Design

a. Objectives

SJP had the following objectives in performing the analytical work to develop its IRP:

1. Identify a PCP with emissions equal to or slightly less than SJP's proportional share of the 8 MMT GHG reduction benchmark, as determined using the Commission's emissions calculator.
2. Identify a PCP that achieves economic, reliability, environmental, security, and other benefits and performance characteristics that are consistent with the goals set forth in Section 454.52(a)(1)(A-I).
3. Identify diverse and balanced PCP that includes both short-term and long-term electricity products as well as electricity-related demand reduction products.
4. Identify portfolios that achieve the resource adequacy requirements established pursuant to PUC Section 380 and provide SJP's share of system reliability and renewable integration resources.
5. Identify a portfolio that complies with all of SJP's Board-adopted procurement directives.
6. Identify a portfolio that is compliant with SJP's obligations under the Renewables Portfolio Standard ("RPS") program.
7. Identify a portfolio that is cost-effective and minimize rate impacts on SJP's customers.

b. Methodology

Modeling Tool(s)

In developing its planned portfolios, SJP used the modeling performed by the Energy Division using RESOLVE and SERVM and incorporated applicable outputs into the RDTv3 and CSP templates as a starting point. After evaluating related results, SJP consulted with CalChoice, leveraging its extensive experience and expertise in the areas of resource planning and procurement, to construct SJP's own, internally developed models to quantify portfolio targets for renewable energy content, capacity, and

portfolio GHG emissions, as well as physical and financial positions conforming with SJP's currently effective risk management policies and business practices.

SJP also utilized its commercial energy trading and risk management system to monitor positions, market exposure, credit exposure, value-at-risk, and other risk management metrics. SJP has maintained a record of all such transactions in this system for several years and plans to continue using this system to facilitate transaction management, resource planning, and risk management activities.

SJP used the outputs of its energy trading and risk management system to develop reports and models which were then analyzed to assess annual, monthly, and hourly open positions by considering all forecasted electric loads and expected deliveries from SJP's resource portfolio. SJP also used a proprietary financial model to project power supply costs based on existing and planned procurements as well as an overall financial assessment of revenues, costs, and cash flows. Current market conditions were considered when compiling any costs associated with expected/planned purchases; actual costs, based on existing procurement contracts, were incorporated as appropriate. Similar to the aforementioned energy trading and risk management system, SJP has used this financial model for several years and has found it to be highly effective in supporting the financial planning needs of its CCA program.

a. For new resource selection, SJP relied upon the modeling and assumptions in the Preferred System Portfolio, SJP's ongoing and recent procurement experience, and consultation with CalChoice, which helped shape assumptions related to resource availability and cost. In addition, SJP's new resource selection reflected the preferences of its City Council, including considerations related to resource location and availability. Modeling Approach

Load Forecast

SJP developed this IRP using its assigned load forecast from the file 2026 LSE GHG Emission Benchmarks[11] (also contained in the CSP templates), as directed in the *Final Ruling*.

Table 1: SJP's 2026-2045 Load Forecast (GWh)

Year	Load Forecast
2026	174.75
2027	181.98
2028	191.46
2029	200.39
2030	210.02
2031	219.19
2032	228.48
2033	238.07

[11] [11] See *Load Forecastss + GHG Benchmarks* (January 16, 2026) (hereinafter "GHG Benchmarks"), *available at* https://www.cpuc.ca.gov/industries-and-topics/electrical-energy/electric-power-procurement/long-term-procurement-planning/2024-26-irp-cycle-events-and-materials.

2034	247.62
2035	256.90
2036	263.85
2037	270.52
2038	276.51
2039	282.04
2040	287.22
2041	291.60
2042	296.10
2043	300.04
2044	303.02
2045	305.63

Load Shape

In developing its portfolio SJP used the default load shape from the Clean System Power Calculator. Use of this load shape does not change SJP's total annual energy volumes for both load and load modifiers, and these energy volumes remain consistent with SJP's assigned load forecast.

Load-Proportional GHG Emissions Benchmark

SJP's modeling was assessed against its 2035 and 2045 load-proportional share of the respective GHG emissions benchmarks, which yielded the following results:[12]

Table 2: SJP's Assigned Shares of GHG Reduction Benchmarks

2030	2035	2040	2045
0.031	0.025	0.021	0.011

Compiling Existing Resources

To populate its baseline resource templates, SJP added existing resources from the following procurement categories:

- Energy Contracts.
- Capacity (Resource Adequacy) Contracts.
- SJP's assigned share of capacity for CAM resources, taken from Energy Division's *Aggregated CAM Resources for LSEs Plan Development* (September 29, 2022).
- SJP's selected Voluntary Allocation and Market Opportunities ("VAMO") allocation of RPS resources from Southern California Edison Company ("SCE")

[12] See *2022 Final GHG Emission Benchmarks for LSEs*, (June 28, 2022) (hereinafter" GHG Benchmarks"), *available at* https://www.cpuc.ca.gov/-/media/cpuc-website/divisions/energy-division/documents/integrated-resource-plan-and-long-term-procurement-plan-irp-ltpp/2022-irp-cycle-events-and-materials/2022-final-ghg-emission-benchmarks-for-lses_public.xlsx.

- SJP's allocation of GHG-free resources from SCE

Selecting New Resources

To identify its new resource procurement opportunities, SJP first determined the new resource capacity it intends to add each year, which considered resource needs (open positions), long-term renewable contracting requirements, renewable portfolio standards, resource adequacy requirements, the need for incremental resource adequacy capacity to contribute to system reliability and renewable integration needs, the potential for technological improvements, and financial considerations. SJP selected resource types based on its experience with competitive solicitations for new renewable and storage resources and its experience in procuring resource adequacy resources, as well as consideration of the studies and modeling underlying the adopted PSP.

Confirming Reliability

SJP's portfolios were evaluated to ensure that sufficient dependable capacity (net qualifying capacity) would be available to meet peak load requirements, as shown in the RDTv3. These requirements include procuring sufficient net qualifying capacity to meet the Planning Reserve Margins applicable to each year of the planning period. SJP used technology-specific Effective Load Carrying Capacity ("ELCC") factors from the RDT to assess the contribution of each resource to system reliability. The ELCCs for battery storage resources degrade precipitously during the planning period, which means that battery resources provide less net qualifying capacity per MW of nameplate capacity. In order to ensure that its portfolio met the reliability requirements in each year of the planning period, SJP added sufficient short-term RA capacity as needed to supplement capacity from its long-term portfolio. SJP's portfolio was designed to ensure that current incremental resource adequacy capacity obligations from the various CPUC procurement orders will be met.

Calculating GHG Emissions

SJP calculated the emissions associated with its PCP using the Commission's Clean System Power calculator. The assigned load forecast and default load shapes and behind the meter adjustments were used for this assessment, along with the planned supply portfolios. The results were checked against the assigned GHG benchmarks included in the Clean System Power tools.

III. Study Results

Use this section to present the results of the analytical work described in Section 2: Study Design.

a. Conforming Portfolio

SJP's Conforming Portfolio

The following table provides a summary of SJP's 2045 PCP, identifying resources by type and distinguishing between the following procurement categories:

- Existing resources (energy and capacity) that SJP owns or contracts with, consistent with definitions provided in the Resource Data Template.
- Existing resources (energy and capacity) that SJP plans to contract with in the future.

- Existing resources (capacity) that SJP partially pays for through CAM.
- New Resources (energy and capacity) that are under development that SJP is planning to procure.
- Future new resources (energy and capacity) that SJP is planning to procure.

In summary, to meet SJP's projected 2045 energy demand of 305 GWh, SJP has selected a 2045 PCP Conforming Portfolio composed primarily of the following resources:

- Solar, planned existing: 10 GWh
- Solar, planned new: 168 GWh
- Wind, planned existing: 10 GWh
- Wind, CA, planned new: 20 GWh
- Wind, New Mexico, new: 23 GWh
- Wind, Wyoming, new; 16 GWh
- Large Hydro, existing: 11 GWh
- Geothermal, new: 26 GWh
- Battery storage, new: 347 GWh dispatch capability

Additionally, SJP's 2045 PCP includes capacity-only resources composed primarily of the following resources:

- CAM, Demand Response and Energy Efficiency Allocations – 13 MW
- Existing natural gas, baseload, and other (planned procurement) – 39 MW

SJP's portfolio includes a mix of existing and new resources. Approximately 146 MW of SJP's PCP is composed of new resources, reflecting SJP's role as an active player in the State's development of new renewable and storage resources. Furthermore, SJP's PCP is comprised of a mix of resources in which SJP can minimize customer rate impacts while still achieving the State's GHG-reduction targets.

SJP's PCP Is Consistent with the Preferred System Plan

The new resources included in SJP's PCP are consistent with the PSP 2045 new resource mix. The Commission adopted the PSP, which established the 8 MMT GHG target by 2045 and adopted the resources in Tables 5 and 6 of D.22-02-004.[13]

The Decision requires that LSEs procure resources in the following categories: Gas, Biomass, Geothermal, Wind, Wind on New-Out-of-State Transmission, Offshore Wind, Utility-Scale Solar, Battery Storage, Pumped (Long-Duration) Storage.

[13] D.22-02-004 at 101-105. Note the Decision references Tables 6 and 7, but this was presumably a typographical error since there was no foregoing Table 7. Thus, SJP understands the Decision to be referencing Tables 5 and 6.

As demonstrated in the following table, SJP's PCP is generally consistent with SJP's proportional share of new procurement for each of the "resource types" identified in D.22-02-004

Table 3: Comparison of SJP's PCP vs PSP

Resource Category	PSP (MW)	SJP's Proportional Share of PSP New Resources (MW)	SJP's PCP (MW)
Geothermal	3,230	**3.66**	**3.48**
Geothermal (Enhanced)	674	**0.76**	**0**
Biomass	12	**0.01**	**0**
In-State Wind	10,949	**12.40**	**8.54**
Out-of-State Wind	19,036	**21.56**	**12.39**
Solar	82,732	**93.68**	**50.47**
Li-ion Battery (4-hr)	6,758	**7.65**	**23.90**
Li-ion Battery (8-hr)	21,102	**23.89**	**31.46**
Location Constrained Storage (12-hr)	8,499	**9.62**	**0**

b. Preferred Conforming Portfolio

a. SJP Preferred Conforming Portfolio

As demonstrated in Table 3 above, SJP's IRP, SJP's PCP consists of a combination of:

- Natural Gas
- Geothermal
- Wind
- Wind on New-Out-of-State Transmission
- Utility-Scale Solar
- Battery Storage

As stated above, in accordance with Section 454.51(b)(3), SJP's governing board has determined that the resource mix in the PCP achieves "economic, reliability, environmental, security, and other benefits and performance characteristics that are consistent with the goals set forth in [Section] 454.51(a)(1)]." These benefits and characteristics are discussed as follows.

GHG Reduction Goals

SJP's PCP achieves results and performance characteristics consistent with the Section 454.52(a)(1)(A) goal of meeting the Commission's 8 MMT GHG reduction benchmark (8 MMT GHG by 2045). The 2035 emissions from SJP's PCP are equivalent to SJP's load-proportional share of the 8 MMT by 2035 emissions target. SJP's proportional share of the 8 MMT GHG target is 0.011 MMT in 2045. According to the Commission's emissions calculator, SJP's PCP would account for 0.010 MMT in 2045 emissions, which is less than the GHG Benchmarks for SJP.

Renewable Energy

SJP's PCP achieves results and performance characteristics consistent with the Section 454.52(a)(1)(B) goal of ensuring that portfolios are composed of at least 60% eligible renewable resources. In 2030 SJP's PCP portfolio would consist of 61% eligible renewable generation, after accounting for resource curtailments, which exceeds the 60% requirement. In 2045, SJP's PCP portfolio would consist of 88% eligible renewable generation after accounting for resource curtailments.

Enable Each Electrical Corporation to Fulfill Its Obligation to Serve Customers at Just and Reasonable Rates

As detailed in Section III.e., below, SJP is committed to serving its customers at reasonable rates. In addition to setting rates that are competitive with SCE, SJP works to minimize rate volatility by constructing a balanced and conservatively hedged power supply portfolio, building prudent financial reserves, and minimizing rate changes to once per year, whenever possible.

Minimizing Bill Impact

SJP's PCP achieves results and performance characteristics consistent with the Section 454.52(a)(1)(D) goal of minimizing the impact of planned procurement on ratepayers' bills. SJP's PCP portfolio consists primarily of renewable resources that generally support a least-cost, best-fit procurement strategy. SJP's planned use of large hydro resources is expected to minimize costs associated with lowering GHG emissions because the cost premiums associated with large hydro energy is less than those associated with RPS qualifying renewable energy.

SJP prioritizes cost competitiveness, reliability, use of renewable energy and local economic development amongst its primary concerns. SJP anticipates that bill impacts will be minimized during its planned portfolio transition through the pursuit of a diversified resource mix that seeks to minimize exposure(s) that could otherwise occur by overemphasizing resources located within specific geographic areas, relying on a limited subset of technology types and/or purchasing from a limited pool of suppliers/developers, amongst other considerations. SJP is also aware of the risks associated with certain renewable-only generating configurations that limit the buyer's ability to re-shape deliveries to times of the day when negative prices and, possibly, curtailments are less likely to occur. With this concern in mind, SJP has carefully considered and incorporated energy storage opportunities within its resource mix, which should promote grid reliability during California's transition to an increasingly clean/renewable energy mix while reducing the potential for unforeseen costs (due to negative pricing) and/or reduced renewable energy deliveries related to curtailment. For example, coupling new-build solar with battery storage increases the capacity value of such projects and provides limited dispatchability for the solar generation, reducing risks related to curtailment and negative pricing. Further, SJP's PCP reduces exposure to volatile natural gas prices as well as bill impacts that may result from periodic spikes in fossil fuel prices.

Ensuring System and Local Reliability

SJP's PCP achieves results and performance characteristics consistent with the Section 454.52(a)(1)(E) goal of ensuring system and local reliability. The PCP meets system resource adequacy requirements as detailed in Section III.f. With the adoption of the Central Procurement Entity structure, SJP no longer has local resource adequacy requirements since the CPE has taken over the procurement of local resource adequacy capacity within SJP's service area, pursuant to D.20-06-002. SJP's portfolio assumes CAM

allocations and CAM resources, which incorporate CPE system and flexible capacity allocations, consistent with what is described in the most recently issued CPE procurement allocations. At this point, uncertainties and initial implementation issues with the CPE make it difficult for SJP to estimate how the CPE structure will change SJP's RA needs over time.

As it has done in the past, and as shown in most state planning studies, SJP anticipates that it will meet a portion of its reliability needs through capacity-only contracts with natural gas plants. SJP has contracted with demand response resources to fulfill some of its RA needs and is exploring other opportunities for demand response. SJP is hopeful that new technologies will be developed that will provide cleaner resources with the reliability characteristics of California's existing natural gas fleet, and it will continue to investigate such resources as appropriate. This noted, one of SJP's primary concerns is supporting ongoing grid reliability, which compels the CCA program, in the near term, to include natural gas resources amongst its resource adequacy purchases until such time that clean, reliable capacity becomes more readily available.

Ensure that at least 65% of RPS Procurement is From Long-Term Contracts

Consistent with Section 454.52(a)(1)(F), SJP is on pace to meet the requirement that 65% of its RPS procurement must come from contracts of 10 years (long-term or more for each compliance period. For the current compliance period, SJP has procured 93% from long-term contracts. Additionally, the majority of the resources shown in SJP's PCP are expected to be acquired through long-term contracts. SJP will continue to procure renewables through short-term contracts when opportunities present themselves for cost-efficient procurement and when doing so would reduce any remaining dependency on system power.

Strengthen the diversity, sustainability, and resilience of the bulk transmission and distribution systems, and local communities

SJP's PCP achieves results and performance characteristics that strengthen the diversity, sustainability and resilience of the bulk transmission and distribution systems, as well as local communities, meeting Section 454.52(a)(1)(G). SJP's PCP relies on procurement from a variety of resource types as well as significant storage resources incorporated in hybrid solar and storage configuration. SJP believes that the complementary nature of the solar and storage in hybrid resources makes better use of the existing transmission system. SJP carefully evaluates the long-term generation load-matching and congestion risks of new resources and weighs its options in the context of its existing supply and net demand on an hourly basis for the full duration of any contract period.

As described below, SJP is actively pursuing the procurement of or has recently purchased capacity to meet the sub-category requirements of D.21-06-035, which includes long-duration storage, clean-firm resources like geothermal, and resources to replace the Diablo Canyon Power Plant. Additionally, SJP has recently procured demand response capacity resources, providing additional system diversity.

Demand-Side Energy Management

SJP's PCP achieves results and performance characteristics consistent with the Section 454.52(a)(1)(H) goal of enhancing demand-side energy management. SJP continues to explore and pursue demand-side management programs such as demand response, energy efficiency, and behind the meter energy storage solutions. As part of SJP's procurement toward D.21-06-035, as discussed in more detail in Section IV.a.ii., SJP has contracted for demand response resources to meet a portion of its requirements.

Distributed energy resources (DER) programs support customer energy cost reduction, GHG reductions, and air quality improvements. Such programs help CCAs reduce costly energy purchases, while some may earn revenue from wholesale market participation. Demand response programs provide customers an opportunity to play a role in the operation of the electric grid by reducing their electricity usage during peak demand days when market prices are highest ("peak events") in exchange for financial incentives.

With the recent expansive deployment of DERs in CalChoice member jurisdictions (such as smart thermostats, rooftop solar and battery storage systems, and electric vehicles and chargers; aka "behind-the-meter" assets), the groundwork is being laid to establish a virtual power plant (VPP) for the benefit of CalChoice Members. Through a VPP, each CCA program may create, monitor, and control a fleet of assets to modify load when power is expensive, and reduce stress on the grid during called events and/or during certain market conditions. Implementation of such a program requires a third-party supplier to provide the DERMS software for management of the devices. In addition, it also requires an experienced program administrator to establish a future demand response incentive offering for CalChoice Member customers. The program administrator will also be responsible for integration and coordination of DER assets with third-party owners.

CalChoice is currently exploring opportunities to launch a DERMS and develop its customer incentive demand response program for 2026-2027.

Minimizing Localized Air Pollutants with Emphasis on Disadvantaged Communities ("DACs")

SJP's PCP achieves results and performance characteristics consistent with the Section 454.52(a)(1)(I) goal of minimizing localized air pollutants and other GHG emissions with early priority on disadvantaged communities. SJP's PCP relies primarily on renewable generation and hydroelectric generation, and this portfolio is expected to exhibit relatively low GHGs and localized air pollution emissions. SJP's PCP minimizes SJP's reliance on unspecified system power, instead opting for renewable and hydroelectric generation procurement/development whenever feasible. Results from the CSP tool indicate the following localized air pollutants associated with SJP's PCP in 2045:

- NOx: 1 tonnes/year
- PM 2.5: 1 tonnes/year
- SO2: 0 tonnes/year

These emissions are expected to result from the planned use of system energy and biomass energy in the PCP, as well as emissions from Combined Heat and Power ("CHP") resources and system energy assigned to the SJP portfolio by the CSP tool. In evaluating new use of biomass resources, SJP will prioritize those located outside of DACs to the greatest practical extent.

c. GHG Emissions Results

SJP used its load-based proportional share of the 8 MMT GHG Benchmark to determine the emissions compliance for its 8 MMT PCP. SJP's assigned load proportional share of the 8 MMT benchmark in 2035 is 0.025 MMT and in 2045 is 0.011 MMT. Based on the 8 MMT version of the CSP calculator, SJP's 8 MMT PCP would result in total 2035 GHG emissions of 0.018 MMT and 2045 GHG emissions 0.010 MMT, which is slightly less than SJP's assigned share of the 8 MMT GHG reduction benchmark.

d. Local Air Pollutant Minimization and Disadvantaged Communities

i. Local Air Pollutants

The CSP calculator estimates the following emissions associated with SJP's 8 MMT portfolio:

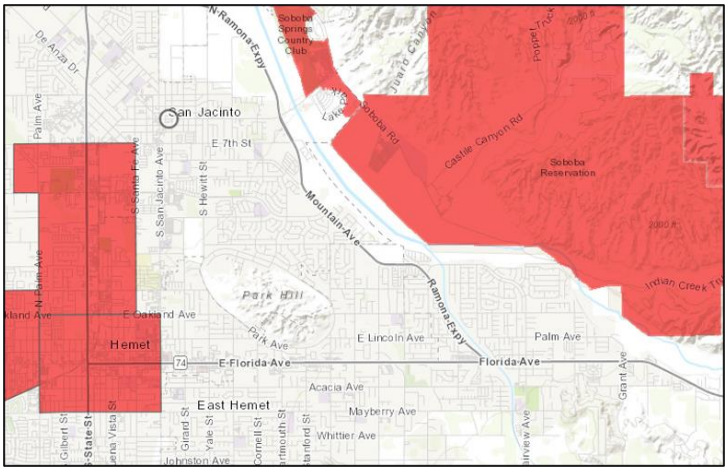
Table 4: PCP Air Pollutants

Pollutant	2030	2035	2040	2045
PM2.5	2	1	1	1
SO2	0	0	0	0
NOx	2	2	2	1

SJP's contribution to air pollutants is a result of a combination of electricity procured from biomass and from reliance on system power. The table below shows the portion of load that is being served from fossil fuel resources and system power each year the portfolio.

Table 5: 8 MMT Portfolio Demand, Fossil Fuel Resources and System Power

	2030	2035	2040	2045
Demand	229	280	313	333
Net System Power	58	48	54	36
% of Load Served by System Power	28%	19%	19%	12%



ii. Focus on Disadvantaged Communities

SJP's IRP is consistent with the goal of minimizing local air pollutants, with early priority on DACs. As defined by the CalEPA's designation, a Disadvantaged Community includes four categories:

- Census tracts receiving the highest 25 percent of overall scores in CalEnviroScreen 4.0 (1,984 tracts).
- Census tracts lacking overall scores in CalEnviroScreen 4.0 due to data gaps but receiving the highest 5 percent of CalEnviroScreen 4.0 cumulative pollution burden scores (19 tracts).
- Census tracts identified in the 2017 DAC designation as disadvantaged, regardless of their scores in CalEnviroScreen 4.0 (307 tracts).
- Lands under the control of federally recognized Tribes.

SJP serves customers in the following DACs:

Figure 2: Map of DACs within SJP's Service Area

SJP's service area includes the following DAC census tracks:

- 6065043517: CalEnviroScreen 4.0 score of 35, among the highest 35% of census tracks.

ii. Power Procurement in DACs

SJP does not currently procure electricity directly from any natural gas or other fossil fuel power plants. However, SJP recognizes the need to help mitigate the impacts of air pollution in regions of the state where communities have been disproportionately impacted by the existing generating fleet and the need for economic development in areas with high unemployment and poverty.

Our planning objective is to minimize unspecified system power usage and prioritize clean resources that reduce local pollution burdens across the State. Where grid capacity exists within our communities, we are particularly conscious of local areas with high cumulative pollution scores. In procurement practice, this involves prioritizing biomass facilities located outside of DACs and renewable generation with the greatest potential for displacement of fossil fuels, wherever practical: in its solicitations SJP requests respondents to identify how the submitted projects may replace or supplant existing generation and to quantify the expected emissions impacts of this transition.

As required in this 2026 IRP submission, SJP has also analyzed its existing portfolio of long-term contracts and their relationship to DACs within a 5-mile radius. While SJP does not have direct data showing emissions reductions as a result of these projects (many are not yet operational), SJP's long-term portfolio is comprised of renewable resources – solar, wind, geothermal – and battery storage capacity which all are anticipated to have either a positive impact or negligible impact on emissions and have the potential to displace emitting generation.

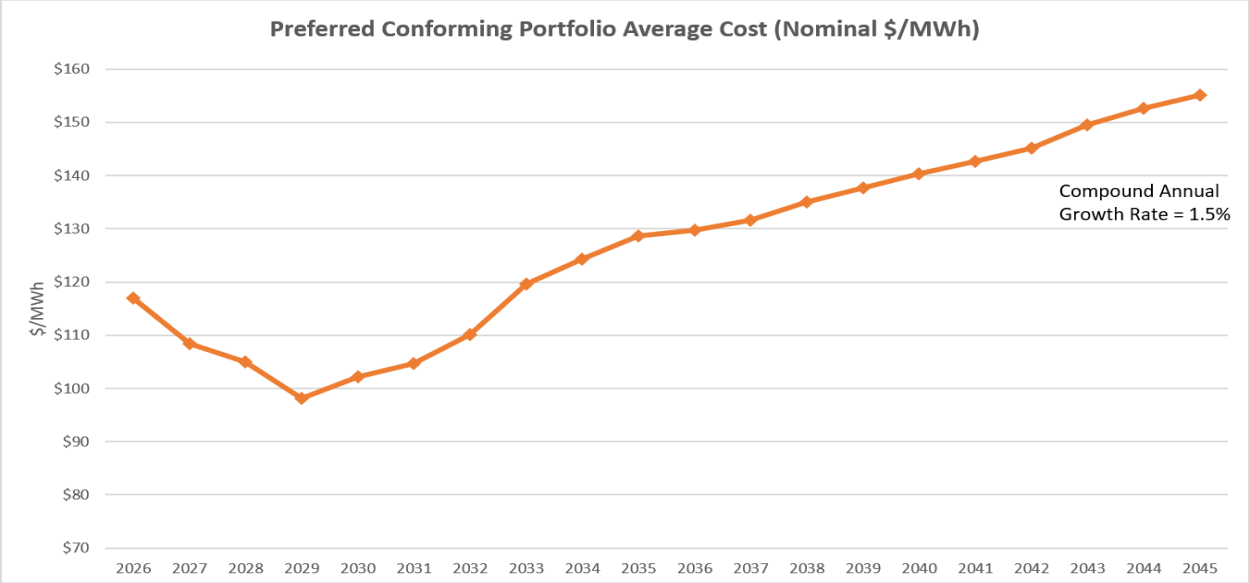
Table 6: PCP Air Pollutants

Project Type	Project Location	Census Tract	DACs in 5-mile radius
Solar Plus Storage	Terra Bella, CA	6107004500	6107003400, 6107004200, 6107004500

e. Cost and Rate Analysis

SJP's 8 MMT PCP is reasonable from a cost perspective. In selecting resources for its portfolios, SJP carefully considered the cost implications of specific resource selections and procurement timing. This analysis was informed by SJP's procurement experience and the standard assumptions and results of the Commission's RESOLVE/SERVM modeling.

SJP strives to keep customer costs as low as possible. This is reflected both in the resources procured and in the timing of those procurements. SJP employs risk-management that considers risk associated with under-procurement, as well as risks of potential over-procurement which could occur from unforeseen changes in load going forward. Risk management also involves assessing the currently available technologies, expected technological developments, and potential for radically different technologies in the future. The assessment of potential resources is not strictly on price issues but includes information on how well the resources match the specific needs of SJP's customers' load. For example, solar resources are often the least expensive on a simple cost per MWh basis, but other resources which may cost more on a simple MWh basis may provide additional benefits in terms of RA capacity, better matching SJP's load profile, or serving the needs of the San Jacinto community.



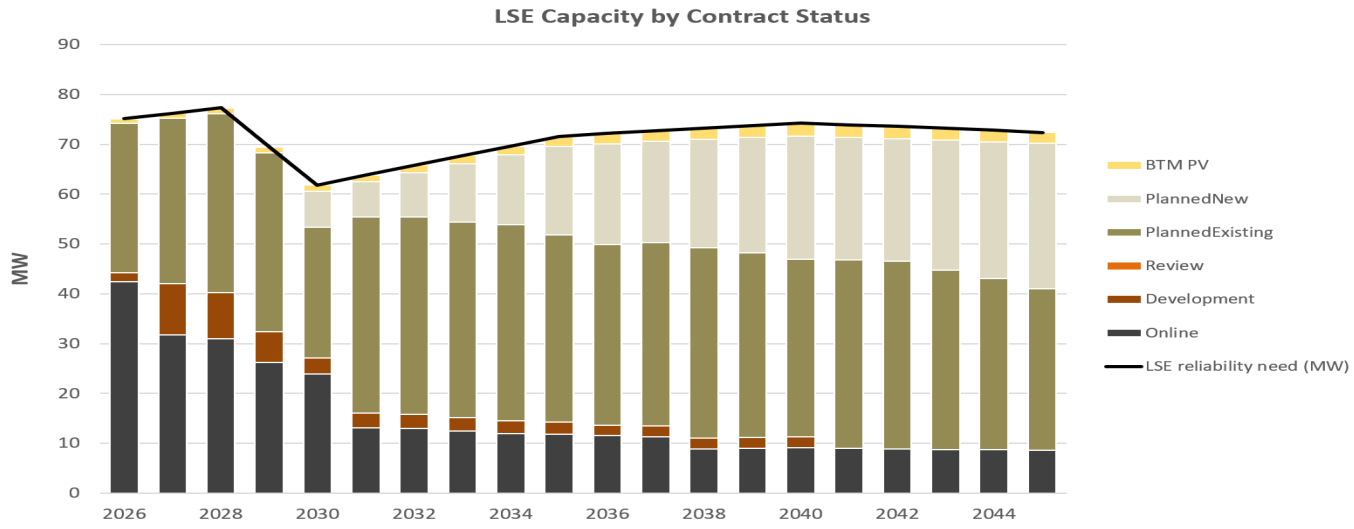
In general, SJP sought to balance the need to procure resources with enough lead time to meet SJP's LSE-specific procurement shortfalls and the Commission-identified overall system new resource needs with the cost-saving benefits of waiting to procure renewable and storage resources with downward sloping cost projections. SJP also recognizes that future resource costs are highly uncertain, and technological advancement can happen unexpectedly; SJP's procurement cycle is designed to take advantage of technological and cost improvements by incrementally adding new resource commitments over time.

SJP continuously monitors the energy markets and reassesses current market prices, expected future prices, technological progress, and its expected needs. When opportunities arise SJP will take advantage of them.

Requirements for All LSEs (including non-IOUs)

SJP's portfolio cost analysis quantifies the expected power supply costs associated with the PCP through 2045. The cost analysis incorporates expected generation costs, resource value (energy, resource adequacy, and renewable energy, as applicable), and the costs associated with resource curtailments. Marginal ELCC values from RESOLVE were used to quantify expected net qualifying capacity values from the portfolio. As these ELCC factors decline significantly for battery storage resources over the planning period and remain low for solar resources, relatively little RA value is obtained from the solar and battery portfolio elements of the portfolio, despite large increased in nameplate capacity. The average nominal portfolio cost increases by a compound average growth rate of 1.5% annually from 2026 through 2045. The yearly average portfolio cost is shown in the following figure.

Figure 3: Cost Impacts



f. System Reliability Analysis

SJP's PCP is expected to be reliable and will contribute SJP's fair share to system reliability needs. The effective capacity of SJP's 8 MMT PCP is provided in the following "System Reliability Progress Tracking Table" from the 30 MMT Resource Data Template dashboard (note that the row containing peak demand is confidential and has been excluded from this table). The net qualifying capacity for the month of September is shown for each year in the following table:

Table 7: System Reliability Progress Tracking, September, 8 MMT PCP

Load and Resource Table by Contract Status

Figure 4: SJP's Capacity by Contract Status

As demonstrated in Table 7, SJP's PCP contributes 70 MW of peak monthly NQC in 2045. Combined with SJP's allocation of 2 MW of behind-the-meter PV, this makes for an LSE total supply of 72 MW. As shown in the table above, this NQC meets SJP's reliability need. Of this total, 29 MW are related to new renewable and hybrid resources as well as new short- and long-duration storage resources. SJP's PCP includes planned contracts with existing resources, which are expected to include resources within the existing natural gas generator fleet, for a total of 41 MW of NQC. This balanced portfolio of flexible capacity works to effectively and reliably integrate a renewables-heavy portfolio, thus exceeding SJP's share of any system-wide renewable integration resource requirements.

g. Existing Resource Planning

Over the last several years, SJP has been ramping up its procurement of new resources as it gains experience in contracting new resources. SJP's portfolios still reflect a sizeable number of existing resources, but much of this is already under contract and SJP anticipates renewing existing contracts.

SJP's PCP shows declining use of existing resources as SJP plans to work with developers to add new renewable generation to the SJP power mix. As demonstrated in SJP's PCP, SJP will drive significant new resource development, which will have a corresponding decrease in SJP's planned use of existing resources. Existing resources that SJP plans to utilize are generally resources that have been available and successfully contracted in the past. Some of these contracts are for multi-year terms, which provides assurance that such resources will remain available. SJP has chosen these resources because of their lower delivery risks compared to new resources. However, SJP recognizes that there is a risk that some existing resources planned for use may not be available to meet SJP's plans. SJP's portfolios attempt to balance out these competing risks, and, as SJP will adapt its plans should energy market conditions change. Existing resources that SJP plans to contract with are generally resources that SJP has

seen have been available. SJP has chosen these resources because of their lower delivery risks compared to new resources. However, SJP recognizes that there is a risk that these existing resources may not be available to meet SJP's plans. SJP's portfolios attempt to balance out these competing risks, and, as SJP has explained elsewhere in this document, SJP does not view its proposed portfolio as written in stone, but rather a map to be followed. SJP is always ready to change its path should the energy market change. If expected existing resources are not available, SJP will consider other possible alternatives. Even if the existing resources are available, SJP may procure new resources if doing so would reduce emissions or save money.

h. Hydro Generation Risk Management

In developing its portfolios, SJP took several steps to manage the risk of reduced hydro availability that may result from future in-state drought. First, SJP has developed a network of Pacific Northwest-based hydroelectric power suppliers, including entities that have substantial Asset Controlling Supplier ("ACS") supply and are thus able to sell firm low-carbon supply to SJP. SJP's PCP includes hydroelectric resources located within California as well as imported hydroelectric power from the Pacific Northwest. Second, SJP will prioritize hydroelectric contracts with marketers that provide firm delivery volumes, helping to reduce the planning uncertainty associated with drought and variable hydroelectric conditions within California. For its PCP, SJP increased its planned use of hydroelectricity, which could be at risk under certain drought conditions. However, due to SJP's relatively small hydroelectric needs, SJP will have a greater probability of filling its annual positions than other, larger LSEs. With that noted, under a drought scenario or in the event that other factors restrict the availability of hydroelectricity and SJP is unsuccessful in filling related shortfalls through short-term contracting opportunities, SJP would plan to substitute with renewable energy resources to ensure it meets its assigned GHG benchmark.

i. Long-Duration Storage Planning

SJP observed that the System Reference Plan includes increasing amounts of eight-hour battery storage and relatively static amounts of four-hour battery storage over the planning period. SJP has similarly planned to increase its use of long-duration storage over time. Planned solar plus storage projects beginning with the 2035 procurement tranche include eight-hour battery storage. This represents a change from the 2022 IRP in which most of the battery storage was planned as four-hour duration. Current cost estimates are high for long duration storage, and this puts upward pressure on portfolio costs. The relatively low ELCC factors for battery storage in the RDT means that relatively little resource adequacy value is obtained, despite the high costs. As additional technologies are market-proven and more developers offer long-duration storage with potentially lower costs, SJP will consider further procurement of these resources. However, SJP will consider shorter duration storage if the economics are more attractive. SJP sees the possibility for substantial benefits from long-duration storage to the grid and for aiding LSEs in compliance with the Slide-of-Day Resource Adequacy program.

j. Clean Firm Power Planning

SJP views clean firm generation as a valuable element of its resource mix as it provides reliable and predictable generation with low emissions. The challenge to greater utilization of this resource type is availability and cost. The primary large scale clean firm resources are geothermal and nuclear generation. Other clean firm generation types, such as biomass and especially biogas are typically smaller-scale projects. None of these resources are abundant, and costs have been increasing rapidly due to resource scarcity and competition with non-LSE offtakers such as data centers, which could limit their role in the planned portfolio. The PCP includes new geothermal contracted and planned to come online in 2031, meeting SJP's D.21-06-035 requirements, and planned new geothermal in 2035 and 2045. The PCP assumes other LSEs and non-LSE offtakers such as data centers are similarly procuring from the pool of available geothermal resources, further limiting how much is assumed to be available to SJP and driving up pricing.

k. Non-CAISO, including Out-of-State, Wind Planning

SJP's planned contracting for new out-of-state wind energy projects generally follows the timeline and relative size for selected builds of this resource type from the CPUC's RESOLVE modeling results. To date, SJP has observed various LSEs with contracts for New Mexico wind resources delivered via the SunZia transmission project. Availability of IARs remains a constraining factor for New Mexico wind, and transmission limitations are anticipated to be constraining availability of wind from other states. As compared to the 2022 IRP, the current PCP includes similar amounts out-of-state wind after adjusting for the larger load reflected in the current PCP. Transmission remains the most significant risk to SJP's planned use of out-of-state wind.

l. Offshore Wind Planning

SJP did not include plans for offshore wind in its PCP pending further progress on development of this resource type. Potential Department of Water Resources contracts of offshore wind energy have not been assumed, but SJP could adapt future plans as needed to incorporate these resources.

m. Transmission Planning

In identifying resource locations for all portfolios, SJP was guided by the following considerations:

- SJP has a general preference for resources located within its service area and the community it serves, but more generally, within Southern California.
- SJP prefers projects located in areas that can utilize existing transmission infrastructure with minimal upgrade/modification costs.
- SJP prefers low-impact renewable energy projects that provide economic benefit to DACs, subject to community interest in siting projects within such locations.

Unlike the IOUs, SJP is not a transmission and distribution ("T&D") system operator. SJP does not enjoy the benefits of a granular knowledge of Southern California Edison Company's ("SCE") T&D system or the CAISO grid, and SJP is not in the best position to identify optimal resource locations and does not

have the expertise inhouse to determine the best locations for new resources. In practice, SJP relies on project developers to conduct the research and technical studies necessary for siting potential generation projects. SJP evaluates projects offered by developers based on a variety of criteria, including transmission availability, nodal prices and potential for congestion, project viability, environmental, workforce, and other factors. As such, SJP generally utilized the PSP selected candidate resources as a guide for likely resource locations in its PCP. These should be treated as general expectations based on the aforementioned considerations, not definitive selections – actual project locations will be selected during SJP's future solicitation processes. SJP believes that the best way to keep costs down during resource solicitations is to not limit the potential locations of the resources. Competition among the responders to resource solicitations ensures that SJP can avail itself of the best possible resources, including allowing developers to explore different locations and select what they feel is the best location for their resource taking into account numerous factors, including the costs of any potential transmission upgrades or curtailment issues. Like most LSEs, SJP doesn't have the necessary resources to examine all possible resource locations to find optimal one from a transmission perspective but relies on the developers of projects doing just that.

As discussed in prior sections, SJP will remain flexible with respect to identifying specific resources for its supply portfolio. If SJP's expected resource locations become infeasible due to various constraints, or if the Commission's modeling efforts happen to indicate that certain resource locations are no longer feasible/desirable, then SJP would ultimately locate and contract for alternative resources that fall in preferred locations. SJP also remains open to attractive project opportunities, even if those locations differ from the assumptions used in this plan. As discussed in prior sections, SJP is very nimble in administering pertinent resource planning processes. More specifically, if SJP's expected resource locations become infeasible due to various constraints, or if the Commission's modeling efforts happen to indicate that certain resource locations are no longer feasible/desirable, then SJP would ultimately locate and contract for alternative resources that fall in preferred locations. SJP also remains open to interesting opportunities, and should developers find locations that have not been anticipated but through the developer's analysis offer benefits SJP will consider them without feeling locked into the existing expected locations.

Most of the resources in the SJP's PCPs are not expected to require transmission upgrades beyond the standard interconnection process. Those resources in SJP's PCP that might require substantial transmission upgrades or new transmission lines are generally planned for much later in the plans and SJP expects that the developers will have determined that the transmission will be available before SJP enters into agreements with them. These resources in the SJP PCPs would include the OOS Wind and Offshore Wind. It is obvious that both offshore and out-of-state wind will require additional transmission, and this is a part of any discussion of these resources. In addition, in selecting these future resources for its portfolios SJP has considered transmission and chosen projects for which any transmission concerns should be minimized or already addressed. SJP's choice of New Mexico Wind was made because of the existing plans for transmission to bring that energy to California; SJP's choice of Morro Bay based on the extensive potential identified for this resource area in the PSP. SJP's choice of Wyoming Wind was made because of the existing plans for transmission to bring that energy to California; indeed, developers of that transmission have approached the CAISO about having that transmission become part of the CAISO. SJP's choice of Diablo Canyon offshore wind was made because of the existing transmission capacity for the Diablo Canyon nuclear power plant, and the timing of the contract, starting in 2032, is after Diablo Canyon has retired, even if the plant is extended as recent legislation has proposed.

IV. Action Plan

a. Proposed Procurement Activities and Potential Barriers

SJP has a well-established procurement process that it uses and will continue to use to steadily achieve its PCP over the planning period. SJP's procurement process includes the following key activities:

- Identification of planned resources by type, desired online date, and capacity.
- Planning for procurement activities in consideration of SJP's risk management policy; resource acquisition lead times including, where applicable, development timelines; staff capacity; and financial considerations.
- Design and administration of resource solicitations. For new resources, these typically take the form of periodic request for offers processes, while for existing resources, procurement activity is more frequent and routinized.
- Careful negotiation of contract terms to ensure positive outcomes for SJP customers with appropriate risk mitigation.
- Ongoing contract management, including where applicable, careful monitoring of development milestones.
- Ongoing contract management, including where applicable, careful monitoring of generator performance after a resource has achieved commercial operation date ("COD").
- Conduct and participate in joint CCA solicitation processes in order to expand procurement opportunities available to SJP.

SJP expects to use competitive solicitations to procure contracts for the new build resources contained in the PCP. Standard power purchase agreement terms are expected to range from ten to twenty years.

i. *The LSE should provide responses for each of the following resource categories:* Resources to meet IRP mandated procurement requirements, including D.21-06-035 and D.23-02-040:

SJP has made significant progress and expects to have sufficient contracted capacity to meet its D.21-06-035 and D.23-02-040 requirements. The recent D.26-02-057 procurement order obligates additional incremental procurement totaling 6 MW by 2032, of which 2 MW is long duration storage and/or clean firm generation. SJP is currently evaluating offers resulting from a recent joint solicitation, which it expects to yield contracts to help contribute to the new obligation.

i. Plans for resources that are currently non-candidate in CPUC's IRPs not described above

Not applicable

ii. Other renewable and/or zero carbon resources not described above

As previously mentioned, SJP's PCPs are not set in stone. SJP continually monitors the renewable energy space through RFPs and discussions with developers, as well as monitoring various news reports, and regulatory proceedings. SJP is ready to modify its expected portfolio if new resources or specific opportunities arise. SJP has expressed openness to alternative potential emissions reduction opportunities in its RFPs and has encouraged such offers from respondents. This has not resulted in any

viable opportunities to date, but SJP will continue to pursue various approaches to explore the potential value of a wide range of options. SJP strives to be a nimble and adaptable energy buyer in order to offer its customers the lowest cost, high renewable content power.

iii. Other energy storage not described above

SJP expects that except for the long-duration storage required under D.21-06-035, D.26-02-057 and future procurement orders, the storage it will acquire will mostly be from paired solar and storage resources and/or standalone storage resources that help balance SJP's very high behind-the-meter solar penetration. SJP remains open to considering other possibilities, especially if new technologies arise that reduce the costs of storage or in situations where storage can help fulfill other needs, such as reducing the need for new transmission or distribution. SJP will continue to monitor developments in the energy storage markets and adjust its portfolio if advantageous opportunities arise.

iv. Other demand response not described above

SJP has already contracted for a modest amount of demand response resources. SJP remains open to other opportunities should they arise, and consistent with the current maximum cumulative capacity ("MCC") bucket requirements.

v. Other energy efficiency not described above

SJP does not currently have any energy efficiency investment plans but may consider these proposals in the future.

vi. Other distributed generation not described above

SJP does not currently have any distributed generation investment plans but may consider these proposals in the future.

vii. Transportation electrification, including any investments that correspond to different levels than what is included in Integrated Energy Policy Report (IEPR)

SJP does not currently have any transportation electrification investment plans but may consider these proposals in the future.

viii. Building electrification, including any investments that correspond to different levels than what is included in Integrated Energy Policy Report (IEPR)

SJP does not currently have any building electrification investment plans but may consider these proposals in the future.

ix. Potential Centralized Procurement, pursuant to AB-1373

Capacity targeted for procurement (MW)	0.5
Estimated customer enrollment	227

On June 22, 2018, the California Public Utilities Commission ("Commission") issued Decision ("D.") 18-06-027, *Alternate Decision Adopting Alternatives to Promote Solar Distributed Generation in Disadvantaged Communities* which provided capacity allocations to Community Choice Aggregators located in a DAC.

As approved by the Commission in Resolution E-5130 the City of San Jacinto (collectively on behalf of their CCA program) elected to pool their capacity allocations to offer a Request for Offers ("RFO") for projects to serve their DAC-GT customers.[1] The City of San Jacinto CCA DAC-GT program has a program capacity allocation of 0.5 MW.[1] The DAC-GT program provides a 20% bill discount to low-income customers, defined as customers eligible for California Alternate Rates for Energy Program ("CARE") or Family Electric Rate Assistance Program ("FERA"), located in Disadvantaged Communities ("DACs"), defined as the top 25% most impacted census tracts statewide using the CalEnviroScreen tool, along with other areas in the highest 5% of CalEnviroScreen's Pollution Burden.[1]

On September 1, 2023, SJP released a DAC-GT RFO for new projects to serve their program. After the closure of the RFO on September 15, 2023, SJP received one offer. SJP successfully negotiated a Power Purchase Agreement ("PPA") for the Minneola Solar Project. SJP submitted the PPA to the Commission review via a Tier 2 Advice Letter on June 3, 2024 and the Energy Division approved the PPA on July 3, 2024.

Construction commenced in 2025 with an original estimated COD on or before March 31, 2026. On October 24, 2025, Coast Energy informed SJP of changes on utility schedule that pushes project COD to Q3 2026. Coast Energy has been diligently working with Southern California Edison Company ("SCE") to advance the project interconnection schedule. However, consideration of CAISO synchronization and commissioning, ongoing delays resulted from the County about the Building permit approval and mainly due to SCE's workload, the Seller agreed with SCE to submit Material Modification Assessment ("MMA") to update the Commercial Operation Date to June 15, 2026. SCE approved the MMA to update the project's critical milestones on December 11, 2025. Based on this approved assessment and current utility workloads, the target COD has been moved from March 31, 2026, to June 15, 2026, with SCE PTO identified for July 20, 2026.

ii. Power Choice CARE – Distributed Microgrids Program

Power Choice program facilitates the installation of solar plus battery storage to CCA customers through a PPA, which is administered/paid via the customer bill. The program is a partnership with Participate Energy, who finances and owns the systems and acts as program administrator, and Tesla, who provides the storage assets for the program. Additionally, the program partners with local solar installers in each participating City.

In October 2025, the program launched "Power Choice CARE" program, which offered a program participation rate at 50% discount from the standard residential Power Choice offering. Customers must be on a CARE/FERA rate and must meet the income eligibility thresholds to participate. The targeted marketing campaign reached more than 80,000 eligible households across CalChoice Member CCA territories. Eligible customers within SJP's customer base include 133 FERA customers and 6,361 CARE customers.

c. LSEs' Tribal Customers

There are no tribal customers currently being served by SJP/

d. Procurement Products

SJP intends to utilize the following physical energy products in procurement activities associated with its PCP. Contracts are expected to be conducted bilaterally rather than via commodities exchanges.

Table 9: Procurement Products

Product	Description
Physical energy, RPS qualifying	Renewable energy qualified to meet California RPS
Physical energy, other carbon free	Non-carbon emitting energy that does not meet California RPS; e.g., large hydro
Physical energy, CAISO energy	Energy delivered to the CAISO grid from unspecified sources
Capacity, Net Qualifying Capacity	Capacity qualified to meet California Resource Adequacy program standards

e. Commission Direction of Actions

Not applicable

V. Lessons Learned

SJP's experience in this IRP cycle has reinforced several important considerations regarding the scale and urgency of clean energy procurement required to achieve California's long-term emissions goals. As a

CCA committed to delivering clean, affordable, and reliable energy to its customers, SJP recognizes that the path to meeting the electric sector's 8 MMT by 2045 GHG benchmark demands sustained, large-scale procurement activity across the entire IRP planning horizon — not merely in the near term.

A central lesson from this planning cycle is the recognition that achieving compliance with state GHG emissions reduction requirements will necessitate substantial and continuous procurement of renewable energy, long-duration storage, clean firm power, and other zero-carbon resources through 2045. The scale of resource additions required — informed by the 2025-2026 Transmission Planning Process Portfolio and SJP's own load growth projections — underscores that no single procurement wave will be sufficient. Rather, LSEs such as SJP must maintain active, ongoing procurement pipelines over the coming two decades to ensure that new clean resources come online in cadence with load growth, contract expirations, and the retirement of fossil-fueled generation. SJP encourages the Commission to structure future IRP cycles, procurement tracks, and associated guidance in a manner that supports and anticipates this long-duration procurement obligation.

SJP intends to be an active and engaged participant in procurement necessary to achieve these objectives. SJP's governing board has affirmed procurement as a strategic priority, and SJP plans to pursue solicitations for renewable energy, energy storage, and other qualifying resources on a rolling basis consistent with its Preferred Conforming Portfolio and Action Plan. SJP recognizes that successful procurement at the scale required through 2045 will depend not only on its own diligence, but also on the Commission's continued efforts to streamline procurement authorization processes, reduce regulatory barriers to contract execution, and provide adequate lead time for LSEs to compete effectively in competitive resource markets.

Glossary of Terms

Alternative Portfolio: *LSEs are permitted to submit "Alternative Portfolios" developed from scenarios using different assumptions from those used in the Preferred System Plan with updates. Any deviations from the "Conforming Portfolio" must be explained and justified.*

Approve (Plan)*: the CPUC's obligation to approve an LSE's integrated resource plan derives from Public Utilities Code Section 454.52(b)(2) and the procurement planning process described in Public Utilities Code Section 454.5, in addition to the CPUC obligation to ensure safe and reliable service at just and reasonable rates under Public Utilities Code Section 451.*

Balancing Authority Area (CAISO): *the collection of generation, transmission, and loads within the metered boundaries of the Balancing Authority. The Balancing Authority maintains load-resource balance within this area.*

Baseline resources: *Those resources assumed to be fixed as a capacity expansion model input, as opposed to Candidate resources, which are selected by the model and are incremental to the Baseline. Baseline resources are existing (already online) or owned or contracted to come online within the planning horizon. Existing resources with announced retirements are excluded from the Baseline for the applicable years. Being "contracted" refers to a resource holding signed contract/s with an LSE/s for much of its energy and capacity, as applicable, for a significant portion of its useful life. The contracts refer to those approved by the CPUC and/or the LSE's governing board, as applicable. These criteria indicate the resource is relatively certain to come online. Baseline resources that are not online at the time of modeling may have a failure rate applied to their nameplate capacity to allow for the risk of them failing to come online.*

Candidate resource: *those resources, such as renewables, energy storage, natural gas generation, and demand response, available for selection in IRP capacity expansion modeling, incremental to the Baseline resources.*

Capacity Expansion Model: *a capacity expansion model is a computer model that simulates generation and transmission investment to meet forecasted electric load over many years, usually with the objective of minimizing the total cost of owning and operating the electrical system. Capacity expansion models can also be configured to only allow solutions that meet specific requirements, such as providing a minimum amount of capacity to ensure the reliability of the system or maintaining greenhouse gas emissions below an established level.*

Certify (a Community Choice Aggregator Plan)*: Public Utilities Code 454.52(b)(3) requires the CPUC to certify the integrated resource plans of CCAs. "Certify" requires a formal act of the Commission to determine that the CCA's Plan complies with the requirements of the statute and the process established via Public Utilities Code 454.51(a). In addition, the Commission must review the CCA Plans to determine any potential impacts on public utility bundled customers under Public Utilities Code Sections 451 and 454, among others.*

Clean System Power (CSP) methodology*: the methodology used to estimate GHG and criteria pollutant emissions associated with an LSE's Portfolio based on how the LSE will expect to rely on system power on an hourly basis.*

Community Choice Aggregator*: a governmental entity formed by a city or county to procure electricity for its residents, businesses, and municipal facilities.*

Conforming Portfolio*: the LSE portfolio that conforms to IRP Planning Standards, the 2045 LSE-specific GHG Emissions Benchmark, use of the LSE's assigned load forecast, use of inputs and assumptions matching those used in developing the Reference System Portfolio, as well as other IRP requirements including the filing of a complete Narrative Template, a Resource Data Template and Clean System Power Calculator*.

Effective Load Carrying Capacity*: a percentage that expresses how well a resource is able avoid loss-of-load events (considering availability and use limitations). The percentage is relative to a reference resource, for example a resource that is always available with no use limitations. It is calculated via probabilistic reliability modeling, and yields a single percentage value for a given resource or grouping of resources.*

Effective Megawatts (MW): *perfect capacity equivalent MW, such as the MW calculated by applying an ELCC % multiplier to nameplate MW.*

Electric Service Provider*: an entity that offers electric service to a retail or end-use customer, but which does not fall within the definition of an electrical corporation under Public Utilities Code Section 218.*

Filing Entity*: an entity required by statute to file an integrated resource plan with CPUC.*

Future*: a set of assumptions about future conditions, such as load or gas prices.*

GHG Benchmark (or LSE-specific 2045 GHG Benchmark)*: the mass-based GHG emission planning targets calculated by staff for each LSE based on the methodology established by the California Air Resources Board and required for use in LSE Portfolio development in IRP.*

GHG Planning Price: *the systemwide marginal GHG abatement cost associated with achieving a specific electric sector GHG planning target.*

Integrated Resources Planning Standards (Planning Standards)*: the set of CPUC IRP rules, guidelines, formulas and metrics that LSEs must include in their LSE Plans.*

Integrated Resource Planning (IRP) process*: integrated resource planning process; the repeating cycle through which integrated resource plans are prepared, submitted, and reviewed by the CPUC*

Long term*: more than 5 years unless otherwise specified.*

Load Serving Entity*: an electrical corporation, electric service provider, community choice aggregator, or electric cooperative.*

Load Serving Entity (LSE) Plan*: an LSE's integrated resource plan; the full set of documents and information submitted by an LSE to the CPUC as part of the IRP process.*

Load Serving Entity (LSE) Portfolio*: a set of supply- and/or demand-side resources with certain attributes that together serve the LSE's assigned load over the IRP planning horizon.*

Loss of Load Expectation (LOLE): *a metric that quantifies the expected frequency of loss-of-load events per year. Loss-of-load is any instance where available generating capacity is insufficient to serve electric demand. If one or more instances of loss-of-load occurring within the same day regardless of duration*

are counted as one loss-of-load event, then the LOLE metric can be compared to a reference point such as the industry probabilistic reliability standard of "one expected day in 10 years," i.e. an LOLE of 0.1.

Maximum Import Capability: a California ISO metric that represents a quantity in MWs of imports determined by the CAISO to be simultaneously deliverable to the aggregate of load in the ISO's Balancing Authority (BAA) Area and thus eligible for use in the Resource Adequacy process. The California ISO assess a MIC MW value for each intertie into the ISO's BAA and allocated yearly to the LSEs. A LSE's RA import showings are limited to its share of the MIC at each intertie.

Net Qualifying Capacity (NQC): *Qualifying Capacity reduced, as applicable, based on: (1) testing and verification; (2) application of performance criteria; and (3) deliverability restrictions. The Net Qualifying Capacity determination shall be made by the California ISO pursuant to the provisions of this California ISO Tariff and the applicable Business Practice Manual.*

Non-modeled costs*: embedded fixed costs in today's energy system (e.g., existing distribution revenue requirement, existing transmission revenue requirement, and energy efficiency program cost).*

Nonstandard LSE Plan*: type of integrated resource plan that an LSE may be eligible to file if it serves load outside the CAISO balancing authority area.*

Optimization*: an exercise undertaken in the CPUC's Integrated Resource Planning (IRP) process using a capacity expansion model to identify a least-cost portfolio of electricity resources for meeting specific policy constraints, such as GHG reduction or RPS targets, while maintaining reliability given a set of assumptions about the future. Optimization in IRP considers resources assumed to be online over the planning horizon (baseline resources), some of which the model may choose not to retain, and additional resources (candidate resources) that the model is able to select to meet future grid needs.*

Planned resource: *any resource included in an LSE portfolio, whether already online or not, that is yet to be procured. Relating this to capacity expansion modeling terms, planned resources can be baseline resources (needing contract renewal, or currently owned/contracted by another LSE), candidate resources, or possibly resources that were not considered by the modeling, e.g., due to the passage of time between the modeling taking place and LSEs developing their plans. Planned resources can be specific (e.g., with a CAISO ID) or generic, with only the type, size and some geographic information identified.*

Qualifying capacity*: the maximum amount of Resource Adequacy Benefits a generating facility could provide before an assessment of its net qualifying capacity.*

Preferred Conforming Portfolio*: the conforming portfolio preferred by an LSE as the most suitable to its own needs; submitted to CPUC for review as one element of the LSE's overall IRP plan.*

Preferred System Plan: *the Commission's integrated resource plan composed of both the aggregation of LSE portfolios (i.e., Preferred System Portfolio) and the set of actions necessary to implement that portfolio (i.e., Preferred System Action Plan).*

Preferred System Portfolio: *the combined portfolios of individual LSEs within the CAISO, aggregated, reviewed and possibly modified by Commission staff as a proposal to the Commission, and adopted by the Commission as most responsive to statutory requirements per Pub. Util. Code 454.51; part of the Preferred System Plan.*

Short term*: 1 to 3 years (unless otherwise specified).*

***Staff**: CPUC Energy Division staff (unless otherwise specified).*

***Standard LSE Plan**: type of integrated resource plan that an LSE is required to file if it serves load within the CAISO balancing authority area (unless the LSE demonstrates exemption from the IRP process).*

***Transmission Planning Process (TPP)**: process conducted by the California Independent System Operator (CAISO) to identify potential transmission system limitations and areas that need reinforcements over 10-year and 15-year horizons.*

July 21, 2026

TO:	City Council
REQUESTED BY:	Stuart McKibbin
APPROVED BY:	Travis Randel, Interim City Manager
SUBJECT:	Working Hours for Esplanade Avenue Widening Phase 1 Warren Road to Sanderson Avenue (CIP# 06-145)

RECOMMENDATION:

Staff recommends that the City Council **AUTHORIZE** working hours for Granite Construction Company.

DISCUSSION:

On March 3, 2026 the City Council awarded the construction contract for Esplanade Widening Phase 1 to Granite Construction Company. The contract specifications require working hours between 7 am and 5 pm in order for the work to be in compliance with construction activity noise regulations of Municipal Code Section 8.40.090.

Due to the hot summer weather there is sufficient need to start construction at 6 am.

Staff recommends the Council authorize the construction work outside of the contract specification working hours.

FISCAL IMPACT:

There will be no impact to the General Fund.

July 21, 2026

TO:	City Council
REQUESTED BY:	Travis Randel, Interim City Manager
APPROVED BY:	Travis Randel, Interim City Manager
SUBJECT:	League of California Cities Open Letter Supporting Comprehensive Tort Reform to Protect California Taxpayers, Survivors, and Essential Public Services

RECOMMENDATION:

Staff recommends that the City Council:

1. **APPROVE** the City of San Jacinto joining the League of California Cities and other public agencies and organizations as a signatory to the open letter to the California State Legislature titled "Urgent Need for Comprehensive Tort Reform to Protect California Taxpayers, Survivors, and Essential Public Services"; and
2. **AUTHORIZE** the Interim City Manager, or designee, to sign and submit substantially similar letters of support or coalition letters consistent with this City Council-approved position relating to public entity tort reform, public agency liability exposure, insurance and risk pool stability, and the protection of taxpayer-funded essential public services.

DISCUSSION:

The League of California Cities, along with numerous cities, counties, school districts, special districts, and public agency risk pools, is requesting that the California State Legislature enact comprehensive tort reform for civil actions against public entities.

The open letter states that public entity liability costs have tripled in the last seven years, now exceeding $7 billion in known exposure, with costs projected to grow by another 70 percent by Fiscal Year 2027-28. The letter further states that these increasing costs are creating significant fiscal pressure on public agencies and diverting limited taxpayer resources away from essential services, including public safety, infrastructure, parks, roads, mental health services, and other core public programs.

The letter emphasizes that public agencies are not seeking to avoid accountability or deny injured parties and survivors access to the courts. Rather, the request is intended to support a more balanced system that preserves public services, protects taxpayer resources, and ensures that public agencies are held responsible in proportion to their actual fault.

The proposed reform framework identified in the letter includes:

1. Defined benefits, including reasonable caps on damages in civil actions against public entities;
2. Proportional liability for economic damages so public entities are responsible only for the share of harm attributable to the public agency; and
3. Heightened evidentiary and procedural standards for claims where witnesses, records, and evidence are unavailable or insufficient to fairly assign liability.

For cities, rising liability costs can result in increased risk pool contributions, higher premiums, special assessments, reduced coverage limits, or difficulty obtaining coverage. These costs are ultimately paid from the same public funds used to provide local services to residents. Supporting the letter is consistent with the City's interest in protecting taxpayer resources, preserving essential public services, and advocating for a balanced liability system that maintains accountability while recognizing the fiscal realities facing public agencies.

In addition to the League of California Cities letter, the City may receive similar requests from public agency risk pools, joint powers authorities, or other local government organizations, including the California Joint Powers Insurance Authority. These requests are expected to address the same general policy issue involving public entity liability exposure, rising insurance and risk pool costs, tort reform, and the protection of taxpayer-funded essential public services.

To allow the City to respond efficiently to substantially similar requests, staff recommends that the City Council authorize the Interim City Manager, or designee, to sign and submit letters of support or coalition letters that are consistent with the City Council's approved position on this matter.

FISCAL IMPACT:

There is no direct fiscal impact associated with joining the letter. However, the subject matter of the letter relates to potential long-term fiscal impacts to the City and other public agencies resulting from increasing liability costs, risk pool contributions, settlements, judgments, and related insurance or coverage expenses.

To: Members, California State Legislature

Urgent Need for Comprehensive Tort Reform to Protect California Taxpayers, Survivors, and Essential Public Services

---

On behalf of the undersigned organizations, we urge the Legislature to enact meaningful tort reform for civil actions against public entities. New data released by the California Association of Joint Powers Authorities (CAJPA) confirms what our members have been warning lawmakers about for years: **public-entity liability costs have tripled in the last seven years, now exceeding $7 billion in known exposure. Costs are on pace to grow another 70 percent by 2027–28.** The fiscal trajectory is unsustainable, the structure of liability is fundamentally unfair to taxpayers, and the consequences are now measured in billions of dollars diverted away from classrooms, fire stations, roads, mental health services, and the essential programs Californians depend on every day.

Our organizations share a deep and unwavering commitment to ensuring that survivors of harm receive justice, support, and meaningful compensation. California's public agencies are not asking for insulation from accountability. We do not seek to deny survivors their day in court. Instead, we seek to fix a system that, as currently structured, transfers enormous wealth to plaintiffs' law firms and threatens the financial solvency of the very public agencies tasked with protecting and serving our vulnerable community members. The longer the Legislature waits, the more public services will be cut, the more agencies will face insolvency.

The Path Forward. We urge the Legislature to advance a comprehensive tort reform package for civil actions against public entities that, at minimum, includes the following:

- **Defined benefits** including caps on damages in civil actions against public entities, ensuring survivors and other injured parties are made whole while preserving the capacity to deliver essential public services.

- **Proportional (several) liability for economic damages** in civil actions against public entities, so that taxpayers pay only for the share of harm actually attributable to the public agency. This way the perpetrators bear the cost of their own conduct and not taxpayers.

- **Heightened evidentiary and procedural standards** for claims where witnesses, records, and evidence archives are absent or insufficient to assign culpability.

Why are Billions of Taxpayer Dollars Being Diverted from Essential Services? AB 218 (Gonzalez, Chapter 861, Statutes of 2019) related to childhood sexual assault is one stark driver, but it is not the only one. Across the spectrum of civil litigation against public entities — from premises liability to dangerous conditions — plaintiffs' firms are increasingly targeting governmental defendants precisely because they are perceived as having the deepest pockets. The result is an unreasonable transfer of public resources to private wealth that the Legislature has both the power and the responsibility to address

How Are Claims Against Public Entities Funded? Most cities, counties, special districts, and school districts in California do not purchase liability coverage from traditional commercial insurance carriers because it is either too expensive, does not provide sufficient coverage, or is simply not offered. Instead, they self-fund their liability coverage or they collectively pool risk through Joint Powers Authorities (JPAs), which are not insurance companies with large capital reserves. Every self-funded claim, including those paid out of a JPA, comes from taxpayer-funded member contributions paid by cities, counties, schools, and other public agencies from the same general fund dollars that pay for police officers, firefighters, teachers, road crews, and homelessness response.

When a JPA pays out claims of magnitude, every member agency in that pool feels it through higher premiums, the potential need for special assessments, reduced coverage limits, and/or increasingly, the inability to obtain coverage at all. Public agencies that have never had a single AB 218 claim filed against them are facing double-digit premium increases. For schools, this means Proposition 98 education dollars intended to support today's students are paying for decades-old liabilities. Even for cities and counties that have few claims filed against them it means delaying critical infrastructure maintenance and reducing local government's ability to provide social-safety-net services to the most vulnerable Californians.

Plaintiffs' Attorneys Are on Track to Profit Over Half a Billion Taxpayer Dollars Every Year. In civil actions against public entities, plaintiffs' counsel commonly recover

contingency fees of 40 percent or more of the gross judgment or settlement. Even using a conservative 30 percent contingency assumption**, estimated plaintiff attorney fees in actions against California public entities have climbed to over $500 million annually.** In many individual cases, **attorney fees approach 50 percent of the taxpayer-funded settlement or award.** That means that for every $10 million paid by a city, county, JPA, or school district, as much as $4 to $5 million is paid to a private law firm. It does not go to the survivor, nor does it go to mental health services, prevention or victim assistance, or back to the taxpayers who funded the payment. Plaintiffs' firms are, in many cases, the single largest beneficiaries of the current system.

Caps on Damages Are Essential to Preserve Public Services and Solvency. Support for meaningful tort reform must include caps on damages in actions against public entities. Without such caps, the cascading effects of recent legislation will only worsen, and the very real threat of insolvency among California's public agencies, already materializing in some regions, will only accelerate. California already imposes reasonable limits in medical malpractice cases under MICRA, recognizing the public interest in such restrictions. The same principle should apply when taxpayer dollars are the source of the payment.

Public Entities Should Pay in Proportion to Their Actual Fault — Not for the Crimes of Others. Under California's current liability structure, a public entity found just one percent at fault can be ordered to pay the entirety of a plaintiff's economic damages — even when the overwhelming majority of fault lies with a criminal actor who has no assets to satisfy a judgment.

The result is morally indefensible: perpetrators escape financial accountability for their conduct, while taxpayers — through their cities, counties, transit agencies, and school districts — are forced to pay for the harm that resulted. It allows perpetrators to walk away while public services are gutted to satisfy awards for conduct the public entity did not commit. **The Legislature must restore proportional (several) liability for economic damages in actions against public entities, so that they are responsible only for the share of harm attributable to the public agency's own conduct.**

Survivors Deserve Their Day in Court, and Public Entities Deserve a Meaningful Opportunity to Defend. Restoring balance to AB 218 claims involving decades-old conduct does not require closing the courthouse door to survivors. Rather, it requires recognizing that, after decades have passed, the records and witnesses needed to fairly adjudicate a claim are often incomplete or simply gone. For claims involving conduct that occurred decades ago, we urge the Legislature to restore balance by reinstating a prior-knowledge requirement, paired with a clear-and-convincing-evidence standard. Prior to AB 218, California law permitted survivors to bring claims against public entities outside the statute of limitations, when a plaintiff could show the entity "knew or had reason to know, or was otherwise on notice, of any unlawful sexual conduct" by the perpetrator and failed to implement reasonable safeguards. That framework provided a meaningful path to justice for survivors with evidence of institutional culpability while also protecting taxpayers from liability for conduct the public entity had no realistic

means to anticipate, prevent, or now defend against.

Our coalition stands ready to work with the Legislature, the Administration, and the survivor community to craft a balanced, durable solution so that necessary action can be taken now. Detailed findings and supporting data are available in CAJPA's recent report, *Protecting Public Funds: The Rising Cost of Claims Against California Public Entities*. Please do not hesitate to contact us with questions or to discuss specific legislative vehicles.

July 21, 2026

TO:	City Council
REQUESTED BY:	Rene Yarnall, Community Development Manager
APPROVED BY:	Travis Randel, Interim City Manager
SUBJECT:	Resolution No. 4137– Authorization to Participate in the County of Riverside's Urban County Programs for Fiscal Years 2027, 2028, and 2029, and Approval of a Cooperation Agreement with the County of Riverside

RECOMMENDATION:

Staff recommends that the City Council:

1. **ADOPT Resolution No. 4137** authorizing the City's participation in the County of Riverside's Urban County Programs;
2. **APPROVE** a Cooperation Agreement with the County of Riverside for the City's use of Community Development Block Grant (CDBG), Home Investment Partnership (HOME), and Emergency Solutions Grant (ESG) funds for Fiscal Years 2027, 2028 and 2029; and
3. **AUTHORIZE** the City Manager to execute the Cooperation Agreement and related documents, with minor modifications as approved by the City Attorney.

DISCUSSION:

In a continuing effort to support community revitalization and affordable housing assistance, the City has an opportunity to continue a partnership with the County of Riverside by entering into a Cooperation Agreement. Execution of the Cooperation Agreement and adoption of the attached Resolution allows the City of San Jacinto to receive funding through County's CDBG, HOME, and ESG programs for the next three-year cycle. The City has collaborated with the County of Riverside (as an urban county) since 2006.

Past funding has been used to address inadequate curb, gutter, sidewalk, and street rehabilitation. The funding has also been utilized for targeted code enforcement activities, funded the Public Library parking lot project and, most recently, provided funding for the Mistletoe Park Restroom Facility Improvement Project.

During the proposed three-year period beginning October 1, 2026, and ending September 30, 2029, the County will continue to be responsible for preparing and submitting to HUD all reports and statements required to secure grant funding and meet application requirements. Participation in the program will prohibit the City from withdrawing from the County's urban program during the three-year agreement. In addition, any unincorporated portion of the County that incorporates, or is annexed during the qualification period, will remain a part of the urban county through the end of the period. Finally, the City is ineligible to apply for grants under HUD's Small Cities (State CDBG) programs, and the City cannot receive funding through a HOME consortium for the fiscal years during the period which the City is participating in the Urban County program.

FISCAL IMPACT:

By executing the Cooperation Agreement, the City will continue to receive an annual allocation of Federal Community Development Block Grant funds through the Riverside County Department of Housing and Workforce Solutions for Fiscal Years 2027, 2028 and 2029.

COOPERATION AGREEMENT
FOR THE COMMUNITY DEVELOPMENT BLOCK GRANT,
HOME INVESTMENT PARTNERSHIPS PROGRAM, AND
EMERGENCY SOLUTIONS GRANT
FOR FISCAL YEARS 2027, 2028, 2029

This Cooperation Agreement for the Community Development Block Grant, HOME Investment Partnerships Program, and the Emergency Solutions Grant for Fiscal Years 2027, 2028, and 2029, hereinafter referred to as "Agreement" is made and entered into this _____ day of _____ 2026, by and between the COUNTY OF RIVERSIDE, a political subdivision of the State of California, hereinafter referred to as "COUNTY", and CITY OF SAN JACINTO, an incorporated municipality within the geographical boundaries of the COUNTY, hereinafter referred to as "CITY." City and County individually referred to herein as "Party" and collectively as the "Parties."

RECITALS

WHEREAS, the Housing and Community Development Act of 1974, as amended (42 U.S.C.A. § 5301 et seq.) (Public Law 93-383), hereinafter called "ACT", provides that Community Development Block Grant funds hereinafter referred to as "CDBG", may be used for the support of activities that provide decent housing, suitable living environments, and expanded economic opportunities principally for persons of low and moderate-income; and

WHEREAS, the HOME Investment Partnerships Act program, hereinafter referred to as "HOME," was enacted as Title II of the National Affordable Housing Act of 1990, for the purposes of: expanding the supply of decent, affordable housing for low and very-low income families with emphasis on rental housing; building State and local capacity to carry out affordable housing programs; and providing for coordinated assistance to participants in the development of affordable low-income housing; and

WHEREAS, the Emergency Solutions Grant, hereinafter referred to as "ESG," was authorized by the McKinney-Vento Homeless Assistance Act of 1987 and the Homeless Emergency Assistance and Rapid Transition to Housing (HEARTH) Act of 2009. The objectives of the ESG program are to increase the number and quality of emergency shelters and transitional

housing facilities for homeless individuals and families, to operate these facilities and provide essential social services, and to help prevent homelessness;

WHEREAS, CDBG regulations require counties to re-qualify as an Urban County under the CDBG program every three (3) years.

WHEREAS, the chief executive officer of the COUNTY is authorized to execute this Agreement pursuant to Riverside County Ordinance No. 442.

WHEREAS, the City Manager or Mayor of CITY is authorized to execute this Agreement on the CITY's behalf.

WHEREAS, the COUNTY Board of Supervisors on July 14, 2026 via Minute Order 30623 authorized the COUNTY Director of Housing and Workforce Solutions to execute this agreement on behalf of the COUNTY.

NOW THEREFORE, in consideration of the mutual covenants herein set forth and the mutual benefits to be derived there from, the parties agree as follows:

1. GENERAL.

(a). This Agreement gives COUNTY authority to undertake, or assist in undertaking, activities for Fiscal Years 2027, 2028, and 2029, that will be funded from the CDBG, HOME, and ESG programs and from any program income generated from the expenditure of such funds. COUNTY and CITY agree to cooperate, to undertake, or to assist in undertaking, community renewal and lower-income housing assistance activities. COUNTY is qualified as an "Urban County" under the ACT. CITY, by executing this Agreement, hereby gives notice of its election to participate in an Urban County's Community Development Block Grant (CDBG), Home Investment Partnerships Act (HOME), and Emergency Solutions Grant (ESG) programs, hereinafter referred to as "Urban County Programs".

(b). By executing this Agreement, CITY understands that it may not apply for grants from appropriations under the Small Cities or State CDBG Programs for fiscal years during the period in which it participates in the Urban County's CDBG program, and that CITY may only participate in the HOME program through the COUNTY'S Urban County Programs, not a HOME

consortium. The CITY may also apply for HOME funds from the State of California, if permitted by the State.

(c). By executing this Agreement, CITY understands that it may only receive a formula allocation of ESG funds through the COUNTY'S Urban County Programs. The CITY may also apply for ESG funds from the State of California, if permitted by the State.

2. TERM.

The term of this Agreement shall be for three (3) years commencing on October 1, 2026, and expiring on September 30, 2029, unless an earlier date of termination is fixed by U.S. Department of Housing and Urban Development, hereinafter called HUD, pursuant to ACT. This Agreement shall remain in effect until funds granted and program income received during the three-year program period are expended and the funded activities completed. Neither the COUNTY nor the CITY may terminate, withdraw, or be removed from the program during the three-year program period.

This Agreement will renew automatically for participation in one successive three-year Urban County qualification period (Federal Fiscal Years 2027-29), unless the CITY or the COUNTY provides written notice to the other party that it elects not to participate in a new qualification period. The terminating party shall send a copy of the notice of termination to the HUD field office by the date specified on the HUD Exchange Urban Counties website. By executing this Agreement, the CITY acknowledges that it has been notified in writing of the CITY's right to make this election. A copy of this Agreement will be sent to the HUD field office by the date specified on the HUD Exchange Urban Counties website.

The Parties agree to adopt amendment(s) to this Agreement as may be required by HUD to meet any new Urban County Qualification requirement(s), when applicable. Failure by either Party to adopt any such amendment, and to submit such amendment to HUD, will void the agreement for such qualification period.

3. PREPARATION OF FEDERALLY REQUIRED FUNDING APPLICATIONS.

The County of Riverside Housing and Workforce Solutions, subject to approval of COUNTY's Board of Supervisors, shall be responsible for preparing and submitting to the U.S.

Department of Housing and Urban Development (HUD), in a timely manner, all reports and statements required by the ACT and the Federal regulations promulgated by HUD to secure entitlement grant funding under the CDBG, HOME, and ESG programs. This duty shall include the preparation and processing of COUNTY Housing, Community, and Economic Development Needs Identification Report, Citizen Participation Plan, the County Five-Year Consolidated Plan, One-Year Action Plan, Consolidated Annual Performance and Evaluation Report (CAPER), and other related programs which satisfy the application requirements of ACT and its regulations.

4. COMPLIANCE WITH FEDERAL STATUTES, REGULATIONS AND OTHER APPLICABLE STATUTES, REGULATIONS AND ORDINANCES.

(a) COUNTY and CITY will comply with the applicable provisions of the ACT and those Federal regulations promulgated by HUD pursuant thereto, as the same currently exists or may hereafter be amended.

(b) The COUNTY and CITY are hereby obligated to take all actions necessary to assure compliance with COUNTY's certification regarding affirmatively furthering fair housing pursuant to Section 104 (b) of Title I of ACT, as amended.

(c) COUNTY and CITY will comply with the applicable provisions of the following: National Environmental Policy Act of 1969; Title VI of the Civil Rights Act of 1964 and the implementing regulations at 24 CFR Part 1; The Fair Housing Act, Title VIII of the Civil Rights Act of 1968, the implementing regulations at 24 CFR Part 100, and the duty to affirmatively further fair housing (AFFH); Title 24 Code of Federal Regulations part 570; Cranston-Gonzales National Affordable housing Act (Public Law 101-625); Executive Order 11063, as amended by Executive Order 12259; Executive Order 11988; the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 (42 U.S.C.§4630, et. seq.); Section 109 of Title I of the ACT and implementing regulations at 24 CFR part 6, including Section 504 of the Rehabilitation Act of 1973 and the implementing regulations at 24 CFR Part 8, Title II of the Americans with Disabilities Act and the implementing regulations at 28 CFR part 35, the Age Discrimination Act of 1975 and the implementing regulations at 24 CFR part 146, Section 3 of the Civil Rights Act of 1963, as amended, Section 3 of the Housing and Urban Development Act of 1968, the Uniform

Relocation Assistance and Real Property Acquisition Policies Act of 1970 and the implementing regulations at 49 CFR Part 24, and Section 104(d) of the Act and implementing regulations at 24 CFR Part 42; and other Federal or state statute or regulation applicable to the use of CDBG, HOME Investment Partnerships Act (enacted as Title II of the National Affordable Housing Act of 1990), and Emergency Solutions Grant funds.

(d) CITY agrees that the Urban County Program funding for activities in, or in support of, the CITY are prohibited if CITY does not affirmatively further fair housing within CITY'S jurisdiction or impedes COUNTY actions to comply with its fair housing certification.

(e) CITY and COUNTY shall meet the citizen participation requirements of 24 CFR 570.301 and provide Urban County Program citizens with all of the following:

i. The estimate of the amount of CDBG funds proposed to be used for activities that will benefit persons of low and moderate-income;

ii. A plan for minimizing displacement of persons as a result of activities assisted with CDBG funds and to assist persons actually displaced as a result of such activities;

iii. A plan that provides for and encourages citizen participation, with particular emphasis on participation by persons of low and moderate-incomes, residents of slum and blighted areas, and of areas in which funds are proposed to be used, and provides for participation of residents in low and moderate-income neighborhoods;

iv. Reasonable and timely access to local meetings, information, and records relating to the grantee's proposed use of funds, as required by the regulations of the Secretary, and relating to the actual use of funds under the ACT;

v. Provide for public meetings to obtain citizen views and to respond to proposals and questions at all stages of the community development program, including at least the development of needs, the review of proposed activities and review of program performance. Meeting shall be held after adequate notice, at times and locations convenient to potential or actual beneficiaries, and with accommodation for the disabled.

(f). CITY shall develop a community development plan, for the period of this Agreement, which identifies community development and housing needs and specifies both short and long-term community development objectives.

(g). CITY certifies, to the best of its knowledge and belief, that:

i. No Federal appropriated funds have been paid or will be paid, by or on behalf of the CITY, to any person influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress, in connection with the awarding of any Federal contract, the making of any Federal grant, the making of any Federal loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment or modification of any Federal contract, grant, loan or cooperative agreement.

ii. If any funds other than Federally-appropriated funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress, in connection with this Federal contract, grant, loan, or cooperative agreement, the undersigned shall complete and submit standard Form-LLL, "Disclosure Form to Report Lobbying", in accordance with its instructions.

iii. The CITY shall require that the language provided in Sections 4(c) of this Agreement be included in the award documents for all sub-awards at all tiers (including subcontracts, sub- grants and contracts under grants, loans, and cooperative agreements) and that all sub-recipients shall certify and disclose accordingly. This certification is a material representation of fact upon which reliance was placed when this transaction was made or entered into.

(iv). In accordance with Section 519 of Public Law 101-144, (the 1990 HUD Appropriations Act), the CITY certifies that it has adopted and is enforcing a policy prohibiting the use of excessive force by law enforcement agencies within its jurisdiction against any individuals engaged in non-violent civil rights demonstrations, and that it has adopted and is enforcing applicable State and local laws against physically barring entrance to, or exit from, a

facility or location which is the subject of such non-violent civil rights demonstrations within its jurisdiction.

5. COMPLIANCE WITH POLICY AND PROGRAM OBJECTIVES.

The COUNTY's Board of Supervisors have adopted policies and procedures to ensure efficient and effective administration of the CDBG, HOME and ESG programs. COUNTY will provide these policies and procedures to CITY within a reasonable time after this Agreement's commencement date. COUNTY and City agree to comply with these said policies and program objectives and to take no actions to obstruct implementation of the approved 2024-2029 Five Year Consolidated Plan and the subsequent Five-Year Consolidated Plan.

6. OTHER AGREEMENTS

Pursuant to Federal regulations at 24 CFR 570.501(b), CITY is subject to the same requirements applicable to sub-recipients, including the requirement of a written agreement set forth in Federal regulations at 24 CFR 570.503. For each fiscal year during the term of this Agreement, COUNTY and CITY shall enter into an additional agreement, commonly known as a Supplemental Agreement, that will have a term coinciding with a CDBG Program Year and enumerate the project(s) CITY will implement with its entitlement funds. Said Supplemental Agreement will set forth the time schedule for completion of said project(s) and any funding sources, in addition to entitlement funds, that will be used in completing the project(s). If substantial compliance with the completion schedule, due to unforeseen or uncontrollable circumstances, cannot be met by CITY, the schedule for the project(s) may be extended by COUNTY. If COUNY determines that substantial progress toward drawdown of funds is not made during the term of the Supplemental Agreement, the entitlement funds associated with the project(s) may be reprogrammed by COUNTY, to other activities as determined by COUNTY, after COUNTY provides appropriate written notice to CITY. COUNTY's decision not to extend the completion schedule associated with the project(s), or to reprogram the entitlement funds associated with the project(s), will not excuse CITY from complying with terms of this Agreement.

7. DETERMINATION OF PROJECTS TO BE FUNDED AND DISTRIBUTION OF ENTITLEMENT FUNDS.

CITY agrees to submit to COUNTY in writing, no later than the date specified by COUNTY prior to each program year, the activities that the CITY desires to implement with its entitlement funds, said designation to comply with statutory and regulatory provisions governing citizen's participation. Said designation is to be reviewed by the COUNTY's Housing and Workforce Solutions to determine that the projects are eligible under Federal regulations for funding and inclusion in the One Year Action Plan of the County's Five-Year Consolidated Plan and consistent with both Federal and COUNTY policy governing use of Community Development Block Grant (CDBG) funds.

In the event that CITY fails to submit to COUNTY the identified activities that the CITY desires to implement with its entitlement funds by the date specified prior to each program year, the COUNTY may determine the activities to be funded, without consent of the CITY, consistent with both Federal and COUNTY policy governing use of Community Development Block Grant (CDBG) funds.

Consistent with Sections 3, 4, 5, 6, and 7 of this Agreement, COUNTY's Board of Supervisors will make the final determination of the distribution and disposition of all CDBG funds received by COUNTY pursuant to the Act.

8. COMMUNITY DEVELOPMENT BLOCK GRANT MANUAL.

CITY warrants that those officers, employees, and agents, retained by it and responsible for implementing projects funded with CDBG have received, reviewed, and will follow the Community Development Block Grant Manual that has been prepared and amended by COUNTY, which Manual is incorporated herein and made a part hereof by this reference.

9. REAL PROPERTY ACQUIRED OR PUBLIC FACILITY CONSTRUCTED WITH CDBG FUNDS.

When CDBG funds are used, in whole or in part, by CITY to acquire real property or to construct a public facility, CITY shall comply with the National Environmental Policy Act of 1969 (42 U.S.C. § 4321, et seq.), the California Environmental Quality Act (Cal. Pub. Resources Code § 21000, et seq.), the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 (42 U.S.C. § 4630, et seq.), and California Government Code Sections 7260 et seq.,

as those laws may be amended from time-to-time and any Federal or state regulations issued to implement the aforementioned laws.

In addition, the following is to occur:

(a) Title to the real property shall vest in CITY;

(b) The real property title will be held by or the constructed facility will be maintained by the CITY for the approved use until five years after the date that the CITY is no longer considered by HUD to be a part of the metropolitan city or urban county, pursuant to 24 CFR 570.501(b).

(c) While held by CITY, the real property or the constructed facility is to be used exclusively for the purpose for which acquisition or construction was originally approved by COUNTY;

(d) CITY shall provide timely written notice to COUNTY of any action which would result in a modification or change in the use of the real property purchased or improved, in whole or in part, with CDBG or HOME funds from that planned at the time of acquisition or improvement, including disposition.

(e) CITY shall provide timely written notice to citizens and opportunity to comment on any proposed modification or change;

(f) Written approval from COUNTY must be secured if the property or the facility is to be put to an alternate use that is or is not consistent with Federal regulations governing CDBG funds;

(g) Should CITY desire during the five (5) year period to use the real property or the constructed facility for a purpose not consistent with applicable Federal regulations governing CDBG funds or to sell the real property or facility, then:

(i) If CITY desires to retain title, it will have to reimburse either COUNTY or the Federal government an amount that represents the percentage of current fair market value that is identical to the percentage that CDBG funds initially comprised when the property was acquired or the facility was constructed;

(ii) If CITY sells the property or facility, or is required to sell the property

or facility, CITY is to reimburse the COUNTY an amount that represents the percentage of proceeds realized by the sale that is identical to the percentage that CDBG funds comprised of the monies paid to initially acquire the property or construct the facility. This percentage amount will be calculated after deducting all actual and reasonable cost of sale from the sale proceeds.

10. DISPOSITION OF INCOME GENERATED BY THE EXPENDITURE OF CDBG FUNDS.

CITY shall inform COUNTY in writing of any income generated by the expenditure of CDBG funds received by CITY from COUNTY. CITY may not retain program income so generated. Any and all program income shall be returned to the County and may only be used for eligible activities in accordance with all CDBG requirements, including all requirements for citizen participation.

The COUNTY is required by HUD to monitor and report the receipt and use of all program income. CITY is required to track, monitor, and report any and all program income as requested by COUNTY.

11. TERMINATION.

Except as provided for in Section 2, CITY and COUNTY cannot terminate or withdraw from this Agreement while it remains in effect.

12. NOTICES.

All correspondence and notices required or contemplated by this Agreement shall be delivered to the respective parties at the addresses set forth below and are deemed submitted two days after their deposit in the United States mail, postage prepaid:

COUNTY OF RIVERSIDE	CITY OF SAN JACINTO
Heidi Marshall, Director	Travis Randel, Interim City Manager
County of Riverside HWS	City of San Jacinto
3403 Tenth Street, Suite 300	595 S. San Jacinto Avenue
Riverside, CA 92501	San Jacinto, CA 92583

13. AGREEMENT ADMINISTRATION.

The City Manager of the CITY, and the Director of Housing and Workforce Solutions of County of Riverside, or their designee, shall administer the terms and conditions of this Agreement for their respective city or county.

14. COOPERATION; FURTHER ACT.

The PARTIES shall cooperate fully with one another, and shall take any additional acts or sign any additional documents as may be necessary, appropriate or convenient to attain the purpose of the Agreement.

15. NO THIRD-PARTY BENEFICIARIES.

This Agreement is made and entered into for the sole protection and benefit of the PARTIES hereto and shall not create any rights in any third parties. No other person or entity shall have any right or action based upon the provisions of the Agreement.

16. SECTION HEADINGS.

The Section headings herein are for the convenience of the PARTIES only and shall not be deemed to govern, limit, modify or in any manner affect the scope, meaning or intent of the provisions or language of this Agreement.

17. FORMER AGREEMENTS UTILIZING COMMUNITY DEVELOPMENT BLOCK GRANT FUNDS BETWEEN COUNTY AND CITY.

All agreements between CITY and COUNTY regarding the use of CDBG funds for fiscal years 1975-76 through fiscal years 2026-27 and any Supplemental Agreements there under, shall remain in full force and effect. If the language of this Agreement is in conflict or inconsistent with the terms of any prior said agreements between CITY and COUNTY, the language of this Agreement will be controlling.

18. INDEMNIFICATION

CITY agrees to indemnify, defend, and hold harmless COUNTY and its authorized officers, employees, agents, and volunteers from any and all claims, actions, losses, damages, and/or liability arising from CITY acts, errors or omissions and for any costs or expenses incurred by COUNTY on account of any claim therefore, except where such indemnifications is prohibited

by law. CITY shall promptly notify COUNTY in writing of the occurrence of any such claims, actions, losses, damages, and/or liability.

CITY shall indemnify and hold harmless COUNTY against any liability, claims, losses, demands, and actions incurred by COUNTY as a result of the determination by HUD or its successor that activities undertaken by CITY under the program(s) fail to comply with any laws, regulations, or policies applicable thereto or that any funds billed by and disbursed to CITY under this Agreement were improperly expended.

19. COMPLIANCE WITH LAWS AND REGULATIONS.

By executing this Agreement, the Parties hereby certify that they will adhere to and comply with all Federal, state and local laws, regulations and ordinances.

20. ENTIRE AGREEMENT.

It is expressly agreed that this Agreement embodies the entire agreement of the Parties in relation to the subject matter hereof, and that no other agreement or understanding, verbal or otherwise, relative to this subject matter, exists between the Parties at the time of execution.

21. SEVERABILITY.

Each paragraph and provision of this Agreement is severable from each other provision and in the event any provision in this Agreement is held by a court of competent jurisdiction to be invalid, void, or unenforceable, the remaining provision will never the less continue in full force without being impaired or invalidated in any way.

22. ASSIGNMENT.

CITY shall not make any sale, assignment, conveyance or lease of any trust or power, or transfer in any other form with respect to this Agreement, or delegate or assign any interest in this Agreement without prior written approval of the County.

23. INTERPRETATION AND GOVERNING LAW.

This Agreement and any dispute arising hereunder shall be governed by and interpreted in accordance with the laws of the State of California. This Agreement shall be construed as a whole according to its fair language and common meaning to achieve the objectives

and purposes of the Parties hereto, and the rule of construction to the effect that ambiguities are to be resolved against the drafting Party shall not be employed in interpreting this Agreement, all Parties having been represented by counsel in the negotiation and preparation hereof.

24. WAIVER.

Failure by a Party to insist upon the strict performance of any of the provisions of this Agreement by the other Party, or the failure by a Party to exercise its rights upon the default of the other Party, shall not constitute a waiver of such Party's right to insist and demand strict compliance by the other Party with the terms of this Agreement thereafter.

25. JURISDICTION AND VENUE.

Any action at law or in equity arising under this Agreement or brought by a Party hereto for the purpose of enforcing, construing or determining the validity of any provision of this Agreement shall be filed in the Superior Court of California, County of Riverside, State of California, and the Parties hereto waive all provisions of law providing for the filing, removal or change of venue to any other court or jurisdiction.

26. AMENDMENTS

No change, amendment, or modification to the Agreement shall be valid or binding upon CITY or COUNTY unless such change, amendment, or modification is in writing and duly executed. CITY and COUNTY agree to adopt any necessary amendments to this Agreement to incorporate changes required by HUD as set forth in the Urban County Qualification Notice. Amendments must be submitted to HUD as provided in the Urban County Qualification Notice and failure to do so will void the automatic renewal for such qualification period.

27. PROHIBITION OF CDBG FUND TRANSFER

Parties to this Agreement understand and agree that they may not sell, trade, or otherwise transfer all or any portion of CDBG Part 52 funds to a Metropolitan City, Urban County, unit of general local government, or insular area that directly or indirectly receives CDBG funds in exchange for any funds, credits, or non-Federal considerations, but must use such funds for activities eligible under Title I of the Housing and Community Development Act of 1974, as amended

28. EMERGENCY SOLUTIONS GRANT FORMULA ALLOCATION

CITY acknowledges that while participating in the COUNTY's Urban County program, CITY can only receive a formula Emergency Solutions Grant (ESG) allocation from the Urban County program and only at such times as authorized by the Board of Supervisors. The CITY and COUNTY may also apply for ESG funds from the State of California, if permitted by the State.

29. HOME INVESTMENT PARTNERSHIP ACT FORMULA ALLOCATION

CITY acknowledges that while participating in the COUNTY's Urban County program, CITY can only receive a formula HOME allocation from the Urban County program and only at such times as authorized by the Board of Supervisors. The CITY and COUNTY may also apply for HOME funds from the State of California, if permitted by the State.

30. AUTHORITY TO EXECUTE.

The persons executing this Agreement or exhibits attached hereto on behalf of the Parties to this Agreement hereby warrant and represent that they have the authority to execute this Agreement and warrant and represent that they have the authority to bind the respective Parties to this Agreement to the performance of its obligations hereunder.

31. INCORPORATION OF RECITALS

The Parties hereby affirm the facts set forth in the recitals above. Said recitals are incorporated herein and made an operative part of this Agreement.

32. COUNTERPARTS

This Agreement may be executed in multiple counterparts, each of which shall be deemed an original, but all of which, together, shall constitute one and the same instrument.

RESOLUTION NO. 4137

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF SAN JACINTO AUTHORIZING PARTICIPATION IN THE COUNTY OF RIVERSIDE'S URBAN COUNTY PROGRAM FOR FISCAL YEARS 2027, 2028, AND 2029

WHEREAS, the County of Riverside has initiated the next Urban County qualification cycle for Fiscal Years 2027, 2028, and 2029 and has requested that participating jurisdictions adopt a resolution confirming participation in the Urban County Program and approve a Cooperation Agreement; and

WHEREAS, the City of San Jacinto has elected to participate as unit of local government (Cooperating City) in the County of Riverside's Urban County Program for Federal Fiscal Years 2027, 2028, and 2029; and

WHEREAS, the Cooperation Agreement will allow the County and City to carry-out activities which are funded by Community Development Block Grant (CDBG), Home Investment Partnerships Program (HOME) funds, and Emergency Solutions Grant (ESG); and

WHEREAS, the Cooperation Agreement will allow the Cooperating City to participate in the Urban County Consolidated Planning Programs.

NOW THEREFORE, BE IT RESOLVED, determined, and ordered by the City Council of the City of San Jacinto, California, as follows:

SECTION 1. The Cooperation Agreement between the County of Riverside and the City of San Jacinto is hereby approved; and

SECTION 2. Authorization to Execute Agreement. The City Manager, or designee, is hereby authorized and directed to execute the Cooperation Agreement and any related documents necessary to effectuate the City's participation in the County of Riverside Urban County Program for Fiscal Years 2027, 2028, and 2029.

PASSED, APPROVED, and ADOPTED at a Regular Meeting of the City Council on the 21st day of July, 2026, by the following vote:

ABSTAIN:

WITNESS MY HAND AND OFFICIAL SEAL this 21st day of July, 2026.

_____
Julia Espinoza, City Clerk
City of San Jacinto

July 21, 2026

TO:	City Council
REQUESTED BY:	Yaneli Hernandez, Senior Planner
APPROVED BY:	Travis Randel, Interim City Manager
SUBJECT:	A proposal by Taylor and Clark Consulting on behalf of Chacon, LLC, to establish a master-planned residential development consisting of 419 dwelling units as well as the construction of onsite roadways, a detention basin, parks, and on-site landscaping on 73.97-net acres.

RECOMMENDATION:

The Planning Commission recommends that the City Council:

1. **DETERMINE** that the proposed Project will not have a significant effect on the environment with the incorporation of mitigation measures based on the findings set forth in the case record and **ADOPT** a Mitigated Negative Declaration (MND) and Mitigation Monitoring and Reporting Program, pursuant to the California Environmental Quality Act (CEQA);

2. **ADOPT Resolution No. 4138** to **ADOPT** the General Plan Amendment entitled:

   A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF SAN JACINTO, CALIFORNIA, APPROVING GENERAL PLAN AMENDMENT PLAN23-0004 FROM VERY LOW DENSITY RESIDENTIAL TO LOW DENSITY RESIDENTIAL FOR THE CHACON FARMS RESIDENTIAL DEVELOPMENT LOCATED AT THE NORTHWEST CORNER OF ESPLANADE AVENUE AND CAWSTON AVENUE;

3. **INTRODUCE Ordinance No. 26-04** to **APPROVE** the Change of Zone entitled:

   AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF SAN JACINTO, CALIFORNIA, APPROVING ZONE CHANGE PLAN23-0005, CHANGING THE ZONING FROM RESIDENTIAL RURAL (RR) TO RESIDENTIAL LOW DENSITY (RL) LOCATED AT THE NORTHWEST CORNER OF ESPLANADE AVENUE AND CAWSTON AVENUE; and

4. **ADOPT Resolution No. 4141** to **APPROVE** the Project entitled:

   A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF SAN JACINTO, CALIFORNIA, APPROVING A GENERAL PLAN AMENDMENT (PLAN23-0004) FROM VERY LOW DENSITY RESIDENTIAL TO LOW DENSITY RESIDENTIAL, A CHANGE OF ZONE (PLAN23-0005) CHANGING THE ZONING FROM RESIDENTIAL RURAL (RR) TO RESIDENTIAL LOW DENSITY (RL), A PLANNED DEVELOPMENT PERMIT TO ESTABLISH A PLANNED RESIDENTIAL DEVELOPMENT WITH 419 DWELLING UNITS, AND TENTATIVE TRACT MAP 39076 TO SUBDIVIDE THE 73.97 ACRE PROPERTY LOCATED AT THE AT THE NORTHWEST CORNER OF ESPLANADE AVENUE AND CAWSTON AVENUE.

DISCUSSION:

On March 24, 2026, the Planning Commission, after holding a Public Hearing, unanimously adopted PC **Resolution No. 26-01**, recommending that the City Council approve PROJ23-0029 (“Project”).

The Project is a proposal by Taylor and Clark Consulting on behalf of Chacon, LLC, to establish a master-planned residential development consisting of 419 homes as well as the construction of onsite roadways, detention basins, parks, and on-site landscaping on 73.97 net acres. To facilitate the development, the applicant submitted a General Plan Amendment (GPA), Change of Zone (CZ), Planned Development Permit (PDP), and Tentative Tract Map (TTM 39076) for review and approval. While most subdivisions are approved by the Planning Commission, projects that contain policy decisions, such as a GPA, CZ, and PDP, require review and approval of the City Council.

The Project site is located on the west side of Cawston Avenue, extending between Seventh Street and Esplanade Avenue. The project site is currently occupied by Chacon Farms and Bruno Ranches agricultural operations, which includes two single-family residences occupied by caretakers. The project site is surrounded by residential uses to the north and east, residential and agricultural uses to the west, and a dairy farm to the south. The current General Plan Land Use Designation is Very Low Density Residential, and the current Zone is Rural Residential. The existing designations allows a maximum of 2 units per gross acre (151 dwelling units for the project site).

The proposed General Plan Amendment designation is Low Density Residential (LDR) and the proposed zoning is Residential Low Density (RL). The LDR and RL designations allow residential uses with densities ranging from 2.1 to 7 dwelling units per acre. This change is necessary to allow the developer to meet their project objectives to construct homes on smaller-lots, with a denser product type than is currently permitted on the site. The proposed designations are compatible with all the surrounding land uses and consistent with the character and density of the development north and west of the project. If adopted, the General Plan Amendment and Change of Zone would allow a minimum of 158 units and a maximum of 529 units.

Subdivision

TTM 39076 consists of 419 individual lots, ranging in size from 3,700 to 7,900 square feet. The subdivision would also establish internal roadways, basins, and designated open space and park areas. Two vehicular access points are planned, which include an east-west oriented roadway from Cawston Avenue, which borders the development to the east, and a north-south oriented roadway that connects to Seventh Street which borders the project to the north. These two proposed entrance roadways lead to a network of internal streets within the tract that ensure appropriate access to every facet of the development, including all homes, parks and basins. The new roads will be private streets that include curb, gutter, sidewalks and streetlights. The internal roads will be private streets, maintained by an Homeowners Association (HOA) with parking allowed on one side of each street.

The recommended conditions of approval require the applicant to widen Seventh Street and Cawston Avenue and install improvement to each roadway that include curb, gutter, sidewalk, streetlights and landscaping. In addition, to ensure that nearby intersections will operate at acceptable levels with the additional traffic created, traffic signals will be required at the intersections of Cawston Avenue and Seventh Street as well as Cawston Avenue and Cottonwood Avenue. The Engineering and Fire Department have reviewed the project to ensure it meets all access and circulation requirements.

Frontage improvements, including curb, gutters and sidewalks, along Esplanade Avenue, which borders the project site to the south, will be constructed as part of the City’s adopted Capital Improvement Program (CIP), which includes the widening of Esplanade Avenue from Warren Road to Sanderson Avenue. The CIP project also include a traffic signal at the intersection at Cawston Avenue and Esplanade Avenue and therefore it is not a required condition of approval. However, the Developer will be required to install the street lights and landscaping improvements along Esplanade Avenue, which are not covered by the City's CIP Project.

Planned Development Permit (PDP)

A PDP is also proposed as part of the Project to support the ultimate development of the subdivision. The PDP provides for a more efficient use of the land and a better living environment and also encourages enhanced amenities. The PDP incorporates the following design features and improvements to facilitate the proposed community:

- Five different architectural styles for the homes with nine color schemes;
- A dual park and basin feature that provides both recreation space and functional stormwater infrastructure;
- Play equipment and design elements that reflect the agricultural character of the surrounding area;
- A coordinated landscape palette that complements the architectural character of the surrounding area;
- Decorative perimeter walls with stone veneer pilasters, enhanced with landscaping and vines;
- Tubular steel fencing with split-face block pilasters at the water quality basin;
- An enhanced entry feature along Cawston Avenue with accent landscaping and 24-inch box trees;
- A paseo connection to Esplanade Avenue providing pedestrian access to and from the community;
- Architectural design standards that exceed minimum Development Code requirements, including five floors plans with multiple elevation types and varied materials such as siding, brick and stone veneer, clay tile elements, and enhanced widow treatments.

The PDP also allows deviations from some of the Development Standards of the RL zone. The modifications to the development standards ensure a more efficient use of the project site, while remaining consistent with the Goals and Policies of the General Plan, and market trends. The applicable standards are listed in the table below:

Development Feature	RL Zone Development Code	Proposed	Proposed Modific
Density	2.1-7.0 DU/AC	5.53 DU/AC	No
Parcel Area (Net)	5,000 sq. ft.	3,717 sq. ft.	Yes
Parcel Width Interior	50 ft.	45 ft.	Yes
Parcel Width Corner	70 ft.	25 ft.	Yes
Parcel Depth	100 ft.	60 ft.	Yes
Setback Front of Building	20 ft.	10 ft.	Yes
Setback to Front of Garage	N/A	20 ft.	N/A
Setback (Interior)	5 ft.	4 ft.	Yes

Setback Street Side	10 ft.	5 ft.	Yes
Setback Rear	20 ft.	10 ft.	Yes
Rear with Slope	20 ft.	10 ft.	Yes
Lot Coverage - Structure	55%	60%	Yes
Primary Structure Height	35 ft.	35 ft.	No

Proposed Homes

The proposed residential units would include 4 to 5 bedrooms, and optional loft spaces within specific floor plans. The development includes one- and two-story homes inspired by an agrarian architecture. The homes would range in size from approximately 1,758 to 3,025 square feet, providing a variety of housing options capable of meeting the needs of different household types and lifestyles. All homes would include a two-car garage as well as driveways that can accommodate additional parking.

PLANNING COMMISSION:

On March 24, 2026, the Planning Commission conducted a Public Hearing for the proposed project. During the hearing, Staff recommended the modification of condition #79 and condition #108 requiring that the Development Impact Fees be subject to the provisions of the enabling ordinance and based upon the fee schedule in effect on the Vesting Date (3/31/2026). At the close of the Public Hearing, the Planning Commission unanimously adopted PC **Resolution No. 26-01** (5-0 in favor), recommending that the City Council approve the project with the revised Conditions of Approval (attached).

Following Planning Commission review, staff added **Condition No. 88** to the Conditions of Approval to require the applicant to construct a new traffic signal at the intersection of Seventh Street and Cawston Avenue. Although the Planning Commission staff report identified the signal improvement in the staff report to the Planning Commission, the condition was inadvertently omitted from the final compiled list of conditions. The addition of **Condition No. 88** ensures consistency with the traffic analysis, reflects staff's original recommendation, and maintains the full set of improvements necessary to support safe and efficient circulation in the project area.

In addition, Staff has also added **Condition No. 61** to clarify that the developer/applicant shall design the residential units, common areas, recreation buildings, project amenities, and other permanent on-site facilities to operate on electrical power only, consistent with the assumptions evaluated in the Project's Initial Study/Mitigated Negative Declaration and supporting Air Quality, Greenhouse Gas, and Energy analysis.

PUBLIC NOTICING AND COMMENTS (CITY COUNCIL):

A 10-day notice of public hearing was advertised on June 26, 2026, in the Press Enterprise. In addition, notices of public hearing were mailed to all property owners within 300 feet of the project site. As of the writing of this staff report, the City received four comment letters that have been included in the attachments.

CONCLUSION:

With approval of the General Plan Amendment, Change of Zone, Planned Development, and Tentative Tract Map, the Project would comply with all applicable provisions of the Development Code. Additionally, the proposed project will produce a development of superior quality and excellence in design through a variety of proposed enhancements within the community. The modified development standards proposed within the PDP allows flexibility in site planning, while upholding the intentions and goals of the General Plan. Furthermore, the project is expected to cater to a different segment of the market that will be drawn to the community based on the smaller lot sizes, product types, and the overall project design. Based on this summary and the findings outlined in the report, staff, and the Planning Commission, support the project.

ENVIRONMENTAL ASSESSMENT:

This Project has been reviewed in accordance with the California Environmental Quality Act ("CEQA") and State CEQA guidelines with the preparation of an Initial Study to determine the potential environmental impacts of the project. The Initial Study concluded that with applied mitigation the Project would not result in a significant effect on the environment with the inclusion of mitigation measures related to Biological Resources, Cultural Resources, Geology and Soils, Hazards and Hazardous Materials, Noise, and Tribal Cultural Resources. The initial Study and Mitigated Negative Declaration (IS/MND) was circulated for a 30-day public comment period via the publication of a Notice of Intent on October 28, 2025. In addition to the publication, the IS/MND was submitted to the State Clearing House for posting (SCH No. 2025101241).

During the course of the project review, the City received comment letters from the Department of Toxic Substances Control (DTSC), the Department of Conservation, individuals associated with Talley Meadows Layups and Retirement business, and Supporters Alliance for Environmental Responsibility (SAFER). While CEQA does not require a written response to comments on an MND, Staff elected to prepare responses to the comments on the Draft IS/MND as a matter of good public policy and transparency. Accordingly, a Final IS/MND (attached) includes written responses to all comments received during the review of the project up until the writing of this report. No new significant environmental impacts or a substantial increase in the severity of previously identified impacts have been identified and therefore, staff determined that a Mitigated Negative Declaration (MND) was the appropriate CEQA document in support of the Project.

The following is a brief summary of comments and responses:

Department of Toxic Substances (DTSC).

The Department of Toxic Substances Control (DTSC), provided recommendations regarding potential contaminants of concern (COCs).

Response:

As part of the MND a Phase 1 Environmental Site Assessment (ESA) was prepared, which did not identify recognized environmental conditions (RECs) requiring immediate subsurface investigation. However, additional soil sampling was also conducted, and no pesticides or heavy metals were detected in the shallow soil samples.

Department of Conservation

The Department of Conservation, provided advisory comments regarding the project's potential conversion of Important Farmland.

Response:

This concern was previously evaluated in the Agriculture and Forestry Resources section of the City of San Jacinto General Plan Environmental Impact Report (EIR). The agricultural resource impacts associated with converting Important Farmland, including the infeasibility of preservation-based mitigation, were fully evaluated and disclosed in the General Plan 2040 EIR.

Talley Meadows Ranch

Talley Meadows Ranch provided concerns about traffic safety and pedestrian hazards on Cawston Avenue along the project frontage.

Response:

Issues related to the safety and functional design of the street frontage have been addressed through the engineering review and approval process, which ensures that all frontage improvements and design details comply with the City's requirements and standards. The improvements required to address the traffic generated by the Project are included in the recommended Conditions of Approval for the Project. As mentioned above, the conditions require the applicant to widen both Seventh Street and Cawston Avenue and install improvement to each roadway that includes curb, gutter, sidewalk, streetlights and landscaping on west side of Cawston Avenue and the south side of Seventh Street. A preliminary signing and striping plan has been included in the staff report to illustrate how the traffic will circulate after the improvements have been installed, which has been review by the City Engineer to ensure traffic safety. In addition, a traffic signal will be required at the intersection of Cawston Avenue and Seventh Street which will enhance circulation.

Supporters Alliance for Environmental Responsibility

In a letter dated March 24, 2026, the Supporters Alliance for Environmental Responsibility (SAFER) asserted that the IS/MND is improper under CEQA due to its alleged failure to adequately assess the Project's potentially significant environmental impacts, requested preparation of an Environmental Impact Report (EIR) on the basis that a fair argument exists that the Project may have adverse environmental impacts, and reserved the right to supplement the comment throughout the administrative process. SAFER subsequently submitted an additional comment letter dated July 3, 2026, during the public review period, asserting that substantial evidence supports a fair argument that the Project may result in significant impacts related to air quality, greenhouse gas emissions, indoor air quality, agricultural resources, and biological resources, and again requesting preparation of an EIR.

Response:

Staff has reviewed the SAFER letter dater July 3, 2026 and there are no issues that have been raised that require a revision to the Environmental Document or that necessitate the Preparation of an Environmental Impact Report. A response to the letter is being prepared in coordination with the Applicant and will be provided to the Council prior to the City Council Meeting.

FISCAL IMPACT:

There is no impact to the General Fund by approving the project. As is typical with subdivisions, the project is conditioned to provide a funding mechanism for the ongoing maintenance of basins and parks within the project boundary. The funding mechanism is typically accomplished by annexation into a Community Facility District (CFD). The funding mechanism will ensure that the project does not rely on the General Fund to provide these services.

In addition, the project will also provide a funding mechanism to support public safety throughout the Project and City, which is typically accomplished by annexation of the project site into an existing Public Safety CFD.

STATE OF CALIFORNIA) **RESOLUTION No. 4138**
COUNTY OF RIVERSIDE) ss
CITY OF SAN JACINTO)

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF SAN JACINTO, CALIFORNIA APPROVING GENERAL PLAN AMENDMENT PLAN23-0004 FROM VERY LOW DESNITY RESIDENTIAL TO LOW DENSITY RESIDENTIAL FOR THE CHACON FARMS RESIDENTIAL DEVELOPMENT LOCATED AT THE NORTHWEST CORNER OF ESPLANADE AVENUE AND CAWSTON AVENUE

WHEREAS, Chacon LLC, filed an application on October 30, 2023 to amend the General Plan under PLAN23-0004 for the Chacon Farms residential development, ("Application"). The proposed project is located at the northwest corner of Esplanade Avenue and Cawston Avenue, APN's 432-260-009, -026, and -027. ("Subject Site"); and

WHEREAS, the Application, along with other applications submitted for the Subject Site, would establish the Chacon Farms residential community within the proposed Low Density Residential land use designation of the San Jacinto General Plan; and

WHEREAS, the Project, including the Application, was reviewed, studied, and found to not have a significant effect on the environment under the California Environmental Quality Act ("CEQA") as more fully described in Section 3 below; and

WHEREAS, on March 24, 2026, the Planning Commission of the City of San Jacinto ("Commission") conducted a duly noticed public hearing on the Project, including the Application, at which time all persons wishing to testify in connection with the Project were heard and the Project was comprehensively reviewed; and

WHEREAS, on July 21, 2026, the City Council in the City of San Jacinto conducted duly noticed Public Hearings on the Application at which time all persons wishing to testify in connection with the Application were heard and the Application was comprehensively reviewed by the City Council; and

WHEREAS, all other legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, BE IT RESOLVED, ordered and determined by the City Council of the City of San Jacinto:

Section 1. Based on the entire record before the City Council, including all written and oral evidence presented to the City Council, the administrative record of the written and oral evidence presented to the Planning Commission, and the findings set forth in this Resolution, the City Council approves General Plan Amendment (PLAN23-0004).

Section 2. Based on the entire record before the City Council, including the staff report, and all written and oral evidence presented to the City Council, including the staff report, Mitigated Negative Declaration (MND), and the Mitigation Monitoring and Reporting Program (MMRP) the City Council find as follows:

a. The proposed General Plan Amendment (PLAN23-0004) to change the Very Low Density Residential (VLDR) designation on the Subject Site to Low Density Residential (LDR) creates consistency with the proposed Change of Zone to Residential Low Density (RL),

and the Project will further the intent of the General Plan by facilitating development at the intersection of Esplanade Avenue and Palm Avenue. This location is advantageous for development. The Application furthers the intent of the General Plan by meeting the following General Plan goals and policies:

Land Use Goal 1: A community with a land use plan that accommodates a mix of uses to meet current and future needs.
Specifically implementing policy 1.3 & 1.6

- The Project supports Policy LU-1.3 by increasing the City's housing supply within an established growth area and contributing toward the City's Regional Housing Needs Allocation (RHNA). The Project includes 419 single-family residential units within the allowable density range of the Low Density Residential designation, helping to meet current and future housing needs.

- The Project is consistent with Policy LU-1.6 through the incorporation of multiple neighborhood parks, open space areas, and an interconnected system of pedestrian paseos. These features provide accessible recreational opportunities and functional gathering spaces for future residents.

Land Use Goal 2: A City that manages and directs growth so that the community and its neighborhoods are protected and enhanced.
Specifically implementing policy 2.1 & 2.2

- The Project supports Policies LU-2.1 and LU-2.2 by promoting an orderly and coordinated pattern of development that is compatible with surrounding residential uses. The Project site is adjacent to existing and planned residential neighborhoods and proposes a density that is consistent with the Low Density Residential designation.

- The Project includes an interconnected circulation network designed to improve internal connectivity, provide efficient vehicular and pedestrian access, and enhance access to on-site open space and neighborhood amenities. The Project also provides connectivity to the Class I multi-use path along Esplanade Avenue, supporting multimodal access.

- The Project provides a balanced distribution of open space and recreational amenities throughout the site, ensuring that residents have convenient access to neighborhood parks and contributing to the overall quality and livability of the community.

The Project has been reviewed for consistency with applicable infrastructure and service requirements and will coordinate with appropriate service providers, including Eastern Municipal Water District, to ensure adequate utilities and public services are provided.

Based on the foregoing, the proposed General Plan Amendment is internally consistent with the goals, policies, and land use framework of the General Plan and will not create inconsistencies with other provisions of the Plan.

b. The proposed General Plan Amendment (PLAN23-0004) to change the Very Low Density Residential (VLDR) designation on the subject property to Low Density Residential (LDR):

1. Will not be detrimental to the public interest, health, safety, convenience, or welfare of the City.

Health and Safety
The proposed project is consistent with the General Plan and promotes public health and safety by incorporating a planned layout that emphasizes pedestrian safety and encourages physical activity and well-being. Four community parks, connected by an integrated network of pathways, will provide residents with a range of social and recreational opportunities.

Convenience
The proposed project conforms with the provision of public convenience according to the General Plan. This development will create an additional 419 homes that are within a convenient distance to surrounding amenities and public infrastructure, including the following:

Transit
The Project Site is approximately 0.6 miles (a 12-minute walk), from the Riverside Transit Agency (RTA) Go Micro service zone. Go Micro is RTA's on-demand public transit service available within the Hemet-San Jacinto micro transit zone. Shared rides can be booked via the Go Micro app at user convenience, rather than relying on a predetermined bus schedule. Go Micro minibuses directly pick up and drop off passengers at desired locations, at desired times (provided both locations are within the micro transit zone and that the trip does not begin and end at route 44 bus stops).

Schools
The Project Site is located within the Hemet Unified School District and would likely be served by nearby schools, including Cawston Elementary School (1.3 miles), Rancho Viejo Middle School (0.9 miles), and Tahquitz High School (0.7 miles). The site may also be served by Megan Cope Elementary School (0.7 miles), which is within the San Jacinto Unified School District. In addition, Mt. San Jacinto College is approximately five miles from the Project Site and is directly accessible via RTA's on-demand transit service, Go Micro.

Welfare
The proposed project with the support of the General Plan Amendment and Zoning Map Amendment, will support and promote the general welfare of San Jacinto residents. The proposed project, specifically, will support and promote walkability, community engagement, integrated open space, pedestrian safety, and an active lifestyle. Integrated Community Parks connected by a network of paths will facilitate recreation and socialization.

2. **If an amendment to the Land Use Element, the affected site(s) is physically suitable in terms of design, location, shape, size, operating**

characteristics, and the provision of public and emergency vehicle (e.g., fire and medical) access and public services and utilities (e.g., fire protection, police protection, potable water, schools, solid waste collection and disposal, storm drainage, wastewater collection, treatment, and disposal, etc.), to ensure that the proposed or anticipated uses and/or development will not endanger, jeopardize, or otherwise constitute a hazard to the property or improvements in the vicinity in which the property is located; and

Physical Suitability
The proposed project, with the support of the General Plan Amendment and Zoning Map Amendment, will not endanger, jeopardize, or otherwise constitute hazard to property in the vicinity in which the property is located and will be physically suitable in terms of design, location, shape, size, operating characteristics, and the provision of public emergency vehicle access and public services as follows:

Design
The Proposed Project is designed to be compatible with the surrounding San Jacinto community and consistent with adjacent residential uses. The development features an interconnected grid of streets that enhances walkability and provides convenient vehicle and pedestrian access to homes, community parks, and recreational amenities distributed throughout the site. Residential architecture will include farmhouse, Spanish, and prairie styles, using quality materials such as stucco, brick, and stone, along with a varied but cohesive color palette that complements the broader community and individual streetscapes. These design elements enhance the visual character of the Chacon Farms community.

The project will not interfere with existing water or sewer easements, as confirmed by the site boundary survey, and will comply with applicable landscaping and setback requirements. The site's north–south orientation supports efficient solar design, with some east–west–oriented homes incorporated where feasible to allow for additional passive solar opportunities.

Location
The proposed development will complement and enhance surrounding land uses. Existing single-family residential neighborhoods are located to the north, northeast, and northwest across West 7th Street, as well as to the east across Cawston Avenue. To the west, the Esplanade Specific Plan includes approximately 130.7 acres of planned single-family residential development.

Shape and Size
The project site is generally rectangular in configuration and consists of three smaller rectangular parcels. The proposed project is designed to minimize sprawl and efficiently utilize the approximately 75.70 acres of site area. The site will accommodate 419 single-family homes with a minimum lot size of 3,717 square feet, along with designated open space for parks and a basin.

Operating Characteristics
The proposed project's operating characteristics will be consistent with those of surrounding single-family developments. The proposed project will operate as a place of housing, enhanced by various amenities within several community parks, to prospective residents.

Public Emergency Vehicle Access
The proposed project's inter-connected network of thoroughfares will contribute to emergency vehicle accessibility. The applicant will comply with any easement requirements for public emergency vehicle access. Further, the proposed public emergency vehicle access will be reviewed by City and County Departments including the City's engineering department and Riverside County Fire, to ensure efficiency and safety for future residents.

Public Service and Utilities
Adequate City infrastructure exists to support the Project. Additionally, the project has been reviewed by Police, Fire, Public Utilities and Engineering to ensure that the design accommodates public and emergency vehicles including solid waste haulers, City crews, and other service providers

3. **The City may reduce, require, or permit the reduction of the residential density for any parcel, or allow development of any parcel at a lower residential density, as defined in Government Code Section 65863, only if the following two additional findings are first made:**

   i. **The reduction is consistent with the adopted General Plan, including the Housing Element; and**

   The proposed Project does not involve a reduction in residential density. The proposed General Plan Amendment would change the land use designation from Very Low Density Residential (0 to 2 dwelling units per acre) to Low Density Residential (2.1 to 7 dwelling units per acre), thereby allowing for an increase in residential density on the Project site. Accordingly, this finding is not applicable. Notwithstanding, the Project is consistent with the General Plan and Housing Element.

   ii. **The remaining sites identified in the Housing Element are adequate to accommodate the jurisdiction's share of the regional housing needs in compliance with Government Code Section 65584**.

   The proposed Project does not reduce residential density and therefore does not trigger this finding. Notwithstanding, the Housing Element identifies adequate sites to accommodate the City's remaining Regional Housing Needs Allocation (RHNA), and the Project would increase the City's housing supply and contribute toward meeting its RHNA obligations.

Section 3. Based on the entire record before the City Council and all written and oral evidence presented, including the staff report, the City Council finds that the nature and extent of all

dedications, reservations, impact fees, and other exactions are roughly proportionate to the impacts created by the use of the Project Site as permitted by the Tentative Tract Map and Planned Development Permit.

Section 4. Based on the entire record before the City Council and all written and oral evidence presented, including the staff report, the City Council finds that the Project will comply with CEQA for the following reasons:

a. Based upon the information contained in the Initial Study and pursuant to the requirements of CEQA; it has been determined that this Project, with the incorporation of mitigation measures, will not have a significant impact on the environment. The mitigation measures required to reduce or mitigate the impacts of this Project on the environment are included in the Project design and/or the Mitigation Monitoring Program and are included as part of the Mitigated Negative Declaration for this Project.

Section 5. Effective Date. This resolution shall become effective on the date on which Ordinance 26-04 for the Change of Zone PLAN23-0005 becomes effective.

Section 6. CEQA. The requirements of the California Environmental Quality Act have been satisfied in that an Initial Study and Mitigated Negative Declaration (together, "IS/MND") were prepared for the Project, including the General Plan Amendment, Zone Change, and Project and the City Council adopted the MND and the related Mitigation Monitoring and Reporting Program.

Section 7. Custodian of Records. The documents and materials that constitute the record of proceedings on which these findings are based are located at the City Clerk's office located at 595 S. San Jacinto Avenue, San Jacinto, CA 92583. The custodian for these records is the City Clerk.

Section 8. Severability. If any provision of this Resolution or the application thereof to any person or circumstance is held invalid, such invalidity shall not affect other provisions or applications of this Resolution which can be given effect without the invalid provision or application, and to this end the provisions of this Resolution are severable. The City Council hereby declares that it would have adopted this Resolution irrespective of the invalidity of any particular portion thereof.

ORDINANCE NO. 26-04

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF SAN JACINTO, CALIFORNIA, APPROVING ZONE CHANGE PLAN23-0005, CHANGING THE ZONING FROM RESIDENTIAL RURAL (RR) TO RESIDENTIAL LOW DENSITY (RL) LOCATED AT THE NORTHWEST CORNER OF ESPLANADE AVENUE AND CAWSTON AVENUE

WHEREAS, Change of Zone Case PLAN23-0005 was filed, together with General Plan Amendment PLAN23-0004, (”Applications”) for the Chacon Farms project in order to establish a higher density residential development; and

WHEREAS, the requested Zone Change PLAN23-0005 would change the zoning designation of the Subject Site from Residential Rural (RR) to Residential Low Density (RL) (the “Zone Change”); and

WHEREAS, a Mitigated Negative Declaration for the proposed Project (“MND”) was circulated between October 28, 2025 and November 27, 2025; and

WHEREAS, the MND analyzed the impacts related to the proposed Zone Change; and

WHEREAS, in accordance with Public Resource Code section 21080.3.1, on February 21, 2024, the City sent letters to the California Native American Tribes that had previously requested to be informed by the City through formal notification of proposed projects in the geographic area that is traditionally and culturally affiliated with the tribe, for the purpose of informing these tribes about the Project, and the City provided a 30-day period for the representative of the tribe to request formal consultation; and

WHEREAS, in accordance with Government Code Section 62352.3, on February 21,2024 the City sent letters to the California Native American Tribes that are on the contact list maintained by the Native American Heritage Commission, for the purpose of informing these tribes about the Project and providing a 90-day period for the representative of the tribe to request formal consultation. Subsequently the City redistributed a SB 18 letter on February 4, 2026 for tribes that were inadvertently omitted from the distribution list; and

WHEREAS, the City received a request for consultation from the Soboba Tribe of Luiseno Indians, which occurred on April 4, 2024 and resulted in conditions included in the conditions of approval; and

WHEREAS, the City received a request for consultation from the Agua Caliente Band of Cahuilla Indians, which occurred on March 4, 2024 and resulted in deferring to Soboba Tribe of Luiseno Indians; and

WHEREAS, entitlements for the Project include the Zone Change which requires the Planning Commission to hold a public hearing and recommend to the City Council that the proposed Zone Change be approved, disapproved, or conditionally approved.

WHEREAS, on March 14, 2026, the City gave public notice of the Planning Commission public hearing for consideration of the Zone Change by advertising in a newspaper of general circulation; by posting notices at City Hall and by mailing notices to owners of property within 300 feet, of the Project, and to local agencies that provide water, sewage, electricity and schools; and

WHEREAS, on March 24, 2026, the Planning Commission conducted a duly-noticed public hearing to consider Project approvals, at which hearing members of the public were afforded an opportunity to comment on the Zone Change, and the Planning Commission adopted a resolution recommending that the City Council approve the Zone Change, as conditioned; and

WHEREAS, on June 27, 2026, the City gave public notice of the City Council public hearing for consideration of the Zone Change by advertising in a newspaper of general circulation; by posting notices at City Hall; and by mailing notices to owners of property within 300 feet of the Project, and to local agencies that provide water, sewage, electricity and schools; and

WHEREAS, on July 21, 2026 the City Council conducted a duly-noticed public hearing and considered evidence concerning the Zone Change.

WHEREAS, all legal prerequisites to the adoption of this Ordinance have occurred.

THE CITY COUNCIL OF THE CITY OF SAN JACINTO DOES HEREBY ORDAIN AS FOLLOWS:

Section 1. Incorporation of Recitals. The above are true and correct and are incorporated herein by reference.

Section 2. Findings: The City Council hereby finds that the Zone Change is compatible with the objectives, policies, and General Plan land use programs specified in the General Plan, as amended by the Application, for the following reasons:

a. The proposed Zone from Rural Residential (RR) to Residential Low Density (RL) will further the intent of the General Plan by providing a variety of new housing opportunities that will complement surrounding uses of primarily residential developments. Specifically, the Change of Zone will continue to allow the development of residences on the project site with a density range of 2.1 to 7 dwelling units to the acre in lieu of the current density range of 0-2 dwelling units to the acre with the Low Density Residential (LDR) designation. With proposed Change of Zone, the proposed project will conform with the goals and policies of the General Plan, including the applicable goals and policies of the Land Use Element and Housing Element, as detailed below:

Land Use Goal 1: A community with a land use plan that accommodates a mix of uses to meet current and future needs. Specifically implementing policy 1.3 & 1.6

- The Project supports Policy LU-1.3 by increasing the City' s housing supply within an established growth area and contributing toward the City's Regional Housing Needs Allocation (RHNA). The Project includes 419 single-family residential units within the allowable density range of the Low Density Residential designation, helping to meet current and future housing needs.

- The Project is consistent with Policy LU-1.6 through the incorporation of multiple neighborhood parks, open space areas, and an interconnected system of pedestrian paseos. These features provide accessible recreational opportunities and functional gathering spaces for future residents.

Land Use Goal 2: A City that manages and directs growth so that the community and its neighborhoods are protected and enhanced. Specifically implementing policy 2.1 & 2.2

- The Project supports Policies LU-2.1 and LU-2.2 by promoting an orderly and coordinated pattern of development that is compatible with surrounding residential uses. The Project site is adjacent to existing and planned residential neighborhoods and proposes a density that is consistent with the Low Density Residential designation.

- The Project includes an interconnected circulation network designed to improve internal connectivity, provide efficient vehicular and pedestrian access, and enhance access to on-site open space and neighborhood amenities. The Project also provides connectivity to the Class I multi-use path along Esplanade Avenue, supporting multimodal access.

- The Project provides a balanced distribution of open space and recreational amenities throughout the site, ensuring that residents have convenient access to neighborhood parks and contributing to the overall quality and livability of the community.

The Project has been reviewed for consistency with applicable infrastructure and service requirements and will coordinate with appropriate service providers, including Eastern Municipal Water District, to ensure adequate utilities and public services are provided.

Based on the foregoing, the proposed Change of Zone is internally consistent with the goals, policies, and land use framework of the General Plan and will not create inconsistencies with other provisions of the Plan.

Health, Safety and Welfare. The proposed Change of Zone will not be detrimental to the public interest, health, safety, convenience, or welfare of the City, and will instead facilitate development of a planned residential community consistent with the General Plan and Development Code. The proposed Project furthers this consistency by promoting public health and safety through a planned layout that emphasizes pedestrian safety and encourages physical activity and well-being, with four community parks connected by an integrated network of pathways providing residents a range of social and recreational opportunities. With the support of the General Plan Amendment and Zoning Map Amendment, the Project will further support and promote the general welfare of San Jacinto residents by encouraging walkability, community engagement, integrated open space, pedestrian safety, and an active lifestyle, with the integrated community parks and connecting path network facilitating recreation and socialization.

Section 1. CEQA. The requirements of the California Environmental Quality Act have been satisfied in that an Initial Study and Mitigated Negative Declaration (together, "IS/MND") were prepared for the Project, including the Zone Change, and the City Council adopted the MND and the related Mitigation Monitoring and Reporting Program.

Section 2. Zone Change. The City Council hereby adopts this Ordinance approving Zone Change PLAN23-0005 to change the zoning designation of the Subject Site from Rural Residential (RR) to Residential Low Density (RL) as shown on the Map that is attached to this ordinance as Exhibit "B."

The City of San Jacinto Zoning Map, as amended by this ordinance, shall govern the zoning for the Subject Site. The development of the Subject Site, and all subsequent approvals, shall be in compliance with the Zoning applicable to the Subject Site now or in the future, to the extent other planning, zoning, land use, development, and development approval process regulations adopted by the City are applicable and not inconsistent or in conflict with the zoning designation for the Subject Site.

Section 3. Custodian of Records. The documents and materials that constitute the record of proceedings on which these findings are based are located at the City Clerk's office located at 595 S. San Jacinto Avenue, San Jacinto, CA 92583. The custodian for these records is the City Clerk.

Section 4. Severability. If any provision of this Ordinance or the application thereof to any person or circumstance is held invalid, such invalidity shall not affect other provisions or applications of this Ordinance which can be given effect without the invalid provision or application, and to this end the provisions of this Ordinance are severable. The City Council hereby declares that it would have adopted this Ordinance irrespective of the invalidity of any particular portion thereof.

Section 5. Effective Date. This Ordinance shall become effective thirty (30) days following its adoption.

Section 6. Publication. The City Clerk shall certify to the adoption of this Ordinance and cause it, or a summary of it, to be published once within 15 days of adoption in a newspaper of general circulation printed and published within the City of San Jacinto, and shall post a certified copy of this Ordinance, including the vote for and against the same, in the Office of the City Clerk in accordance with Government Code § 36933.

Introduced at a regular meeting of the City Council on the 21st day of July 2026.

ORDINANCE NO. 26-04

STATE OF CALIFORNIA) **RESOLUTION NO. 4141**
COUNTY OF RIVERSIDE)ss
CITY OF SAN JACINTO)

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF SAN JACINTO, CALIFRONIA APPROVING A GENERAL PLAN AMENDMENT (PLAN23-0004) FROM VERY LOW DENSITY RESIDENTIAL TO LOW DENSITY RESIDENTIAL, A CHANGE OF ZONE (PLAN23-0005) CHAGING THE ZONING FROM RESIDENTIAL RURAL (RR) TO RESIDENTIAL LOW DENSITY (RL), A PLANNED DEVELOPMENT PERMIT TO ESTABLISH A PLANNED RESIDENTIAL DEVELOPMENT WITH 419 DWELLING UNITS, AND TENTATIVE TRACT MAP 39076 TO SUBDIVIDE THE 73.97 ACRE PROPERTY LOCATED AT THE NORTHWEST CORNER OF ESPLANADE AVENUE AND CAWSTON AVENUE

WHEREAS, Chacon, LLC submitted applications for a General Plan Amendment, Change of Zone, Planned Development Permit, and Tentative Tract Map 39076 to subdivide approximately 73.97 net acres into 419 single-family residential lots, along with lettered lots for internal roadways, a detention basin, parks, and landscape areas, located between 7th Street to the north, Esplanade Avenue to the south, and west of Cawston Avenue (Project); and;

WHEREAS, the City, as Lead Agency, prepared an Initial Study in accordance with the California Environmental Quality Act (CEQA) and determined that, with the incorporation of mitigation measures, the Project will not have a significant effect on the environment, and a Mitigated Negative Declaration (MND) and Mitigation Monitoring and Reporting Program (MMRP) were prepared for the Project; and;

WHEREAS, on March 24, 2026, the Planning Commission of the City of San Jacinto ("Commission") conducted a duly noticed public hearing on the Project at which time all persons wishing to testify in connection with the Project were heard, and the Project was comprehensively reviewed, and the Project was recommended for approval to the City Council; and

WHEREAS, on July 21, 2026, the City Council the City of San Jacinto conducted duly noticed public hearing on the Application at which time all persons wishing to testify in connection with the Application were heard and the Application was comprehensively reviewed by the City Council; and

WHEREAS, all other legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, BE IT RESOLVED, ordered and determined by the City Council of the City of San Jacinto:

SECTION 1. Based on the entire record before the City Council, all written and oral evidence presented, the recommendation of the Planning Commission and the findings made in this Resolution, the City Council hereby approves General Plan Amendment (PLAN23-0004), Change of Zone (PLAN23-0005), Planned Development Permit, Tentative Tract Map 39076 subject to the Findings of Fact and Conditions of Approval in the staff report.

SECTION 2. Based on the entire record before the City Council and all written and oral evidence presented, the City Council finds:

GENERAL PLAN AMENDMENT

1. **The amendment is internally consistent with all other provisions of the General Plan and any applicable specific plan;**

   The proposed General Plan Amendment from VLDR (Very Low Density Residential) to LDR (Low Density Residential) will further the intent of the General Plan by providing a variety of new housing opportunities that will complement surrounding uses of primarily residential developments. Specifically the General Plan Amendment will continue to allow the development of residences on the project site with a density range of 2.1 to 7 dwelling units to the acre in lieu of the current density range of 0-2 dwelling units to the acre with the VLDR designation. With proposed General Plan Amendment, the proposed project will conform with the goals and policies of the General Plan, including the applicable goals and policies of the Land Use Element and Housing Element, as detailed below:

   Land Use Goal 1: A community with a land use plan that accommodates a mix of uses to meet current and future needs.
   Specifically implementing policy 1.3 & 1.6

   - The Project supports Policy LU-1.3 by increasing the City's housing supply within an established growth area and contributing toward the City's Regional Housing Needs Allocation (RHNA). The Project includes 419 single-family residential units within the allowable density range of the Low Density Residential designation, helping to meet current and future housing needs.

   - The Project is consistent with Policy LU-1.6 through the incorporation of multiple neighborhood parks, open space areas, and an interconnected system of pedestrian paseos. These features provide accessible recreational opportunities and functional gathering spaces for future residents.

   Land Use Goal 2: A City that manages and directs growth so that the community and its neighborhoods are protected and enhanced.
   Specifically implementing policy 2.1 & 2.2

   - The Project supports Policies LU-2.1 and LU-2.2 by promoting an orderly and coordinated pattern of development that is compatible with surrounding residential uses. The Project site is adjacent to existing and planned residential neighborhoods and proposes a density that is consistent with the Low Density Residential designation.

   - The Project includes an interconnected circulation network designed to improve internal connectivity, provide efficient vehicular and pedestrian access, and enhance access to on-site open space and neighborhood

amenities. The Project also provides connectivity to the Class I multi-use path along Esplanade Avenue, supporting multimodal access.

- The Project provides a balanced distribution of open space and recreational amenities throughout the site, ensuring that residents have convenient access to neighborhood parks and contributing to the overall quality and livability of the community.

The Project has been reviewed for consistency with applicable infrastructure and service requirements and will coordinate with appropriate service providers, including Eastern Municipal Water District, to ensure adequate utilities and public services are provided.

Based on the foregoing, the proposed General Plan Amendment is internally consistent with the goals, policies, and land use framework of the General Plan and will not create inconsistencies with other provisions of the Plan.

2. The proposed amendment will not be detrimental to the public interest, health, safety, convenience, or welfare of the City;

Public Interest
The proposed project is consistent with the General Plan and serves the public interest by providing a balanced mix of housing and amenities that meet community needs and enhance recreational and social opportunities. The project would contribute 419 residential units toward the Regional Housing Needs Allocation (RHNA), offering a variety of housing types to accommodate diverse ages, incomes, and household needs. The homes are designed with architectural styles that complement the area's rural character. Overall, the development promotes livability through walkability, community engagement, integrated open space, pedestrian safety, and support for an active lifestyle.

Health and Safety
The proposed project is consistent with the General Plan and promotes public health and safety by incorporating a planned layout that emphasizes pedestrian safety and encourages physical activity and well-being. Four community parks, connected by an integrated network of pathways, will provide residents with a range of social and recreational opportunities.

Convenience
The proposed project conforms with the provision of public convenience according to the General Plan. This development will create an additional 419 homes that are within a convenient distance to surrounding amenities and public infrastructure, including the following:

- *Transit*
  The Project Site is approximately 0.6 miles (a 12-minute walk), from the Riverside Transit Agency (RTA) Go Micro service zone. Go Micro is RTA's on-demand public transit service available within the Hemet-San Jacinto micro transit zone. Shared rides can be booked via the Go Micro app at user convenience, rather than relying on a predetermined bus schedule. Go Micro minibuses directly pick up and drop off passengers at desired locations, at desired times (provided both locations are within

the micro transit zone and that the trip does not begin and end at route 44 bus stops).

- *Schools*
  The Project Site is located within the Hemet Unified School District and would likely be served by nearby schools, including Cawston Elementary School (1.3 miles), Rancho Viejo Middle School (0.9 miles), and Tahquitz High School (0.7 miles). The site may also be served by Megan Cope Elementary School (0.7 miles), which is within the San Jacinto Unified School District. In addition, Mt. San Jacinto College is approximately five miles from the Project Site and is directly accessible via RTA's on-demand transit service, Go Micro.

Welfare

The proposed project with the support of the General Plan Amendment and Zoning Map Amendment, will support and promote the general welfare of San Jacinto residents. The proposed project, specifically, will support and promote walkability, community engagement, integrated open space, pedestrian safety, and an active lifestyle. Integrated Community Parks connected by a network of paths will facilitate recreation and socialization.

3. **If an amendment to the Land Use Element, the affected site(s) is physically suitable in terms of design, location, shape, size, operating characteristics, and the provision of public and emergency vehicle (e.g., fire and medical) access and public services and utilities (e.g., fire protection, police protection, potable water, schools, solid waste collection and disposal, storm drainage, wastewater collection, treatment, and disposal, etc.), to ensure that the proposed or anticipated uses and/or development will not endanger, jeopardize, or otherwise constitute a hazard to the property or improvements in the vicinity in which the property is located; and**

Physical Suitability

The proposed project, with the support of the General Plan Amendment and Zoning Map Amendment, will not endanger, jeopardize, or otherwise constitute hazard to property in the vicinity in which the property is located and will be physically suitable in terms of design, location, shape, size, operating characteristics, and the provision of public emergency vehicle access and public services as follows:

- *Design*
  The Proposed Project is designed to be compatible with the surrounding San Jacinto community and consistent with adjacent residential uses. The development features an interconnected grid of streets that enhances walkability and provides convenient vehicle and pedestrian access to homes, community parks, and recreational amenities distributed throughout the site.

  Residential architecture will include farmhouse, Spanish, and prairie styles, using quality materials such as stucco, brick, and stone, along with a varied but cohesive color palette that complements the broader community and individual streetscapes. These design elements

enhance the visual character of the Chacon Farms community.

The project will not interfere with existing water or sewer easements, as confirmed by the site boundary survey, and will comply with applicable landscaping and setback requirements. The site's north–south orientation supports efficient solar design, with some east–west–oriented homes incorporated where feasible to allow for additional passive solar opportunities.

- *Location*
  The proposed development will complement and enhance surrounding land uses. Existing single-family residential neighborhoods are located to the north, northeast, and northwest across West 7th Street, as well as to the east across Cawston Avenue. To the west, the Esplanade Specific Plan includes approximately 130.7 acres of planned single-family residential development.

- *Shape and Size*
  The project site is generally rectangular in configuration and consists of three smaller rectangular parcels. The proposed project is designed to minimize sprawl and efficiently utilize the approximately 75.70 acres of site area. The site will accommodate 419 single-family homes with a minimum lot size of 3,717 square feet, along with designated open space for parks and a basin.

- *Operating Characteristics*
  The proposed projects operating characteristics will be consistent with those of surrounding single-family developments. The proposed project will operate as a place of housing, enhanced by various amenities within several community parks, to prospective residents.

- *Public Emergency Vehicle Access*
  The proposed project's inter-connected network of thoroughfares will contribute to emergency vehicle accessibility. The applicant will comply with any easement requirements for public emergency vehicle access. Further, the proposed public emergency vehicle access will be reviewed by City and County Departments including the City's engineering department and Riverside County Fire, to ensure efficiency and safety for future residents.

- *Public Service and Utilities*
  Adequate City infrastructure exists to support the Project. Additionally, the project has been reviewed by Police, Fire, Public Utilities and Engineering to ensure that the design accommodates public and emergency vehicles including solid waste haulers, City crews, and other service providers.

4. **The City may reduce, require, or permit the reduction of, the residential density for any parcel to, or allow development of any parcel at, a lower residential density, as defined in Government Code Section 65863, only if the following two additional findings are first made:**

a. The reduction is consistent with the adopted General Plan, including the Housing Element; and

The proposed Project does not involve a reduction in residential density. The proposed General Plan Amendment would change the land use designation from Very Low Density Residential (0 to 2 dwelling units per acre) to Low Density Residential (2.1 to 7 dwelling units per acre), thereby allowing for an increase in residential density on the Project site. Accordingly, this finding is not applicable. Notwithstanding, the Project is consistent with the General Plan and Housing Element.

b. The remaining sites identified in the Housing Element are adequate to accommodate the jurisdiction's share of the regional housing needs in compliance with Government Code Section 65584.

The proposed Project does not reduce residential density and therefore does not trigger this finding. Notwithstanding, the Housing Element identifies adequate sites to accommodate the City's remaining Regional Housing Needs Allocation (RHNA), and the Project would increase the City's housing supply and contribute toward meeting its RHNA obligations.

CHANGE OF ZONE:

1. Findings required for all Development Code and Zoning Map amendments.

a. The proposed amendment is consistent with the General Plan and any applicable specific plan;

The proposed Change of Zone from Rural Residential (RR) to Residential Low Density (RL) is consistent with the General Plan with the adoption of the proposed General Plan Amendment. The RL zoning designation is the implementing zone for the Low Density Residential (LDR) General Plan land use designation and will ensure consistency between the General Plan and Zoning Map. The Project site is not located within a Specific Plan area; therefore, no Specific Plan applies.

b. The proposed amendment will not be detrimental to the public interest, health, safety, convenience, or welfare of the City.

The proposed Change of Zone will not be detrimental to the public interest, health, safety, convenience, or welfare of the City. The amendment will facilitate the development of a planned residential community that is consistent with the General Plan and Development Code. The Project incorporates an interconnected circulation system, neighborhood parks, and pedestrian amenities that promote walkability and community interaction.

The Project has been reviewed by applicable City departments and service providers to ensure that adequate infrastructure and public services,

including police, fire, utilities, and emergency access, are available to serve the site. As conditioned, the Project will not result in adverse impacts to the surrounding area and will support orderly and coordinated development.

2. **Additional findings for Zoning Map amendments**

   a. **The affected site(s) is physically suitable in terms of design, location, shape, size, operating characteristics, and the provision of public and emergency vehicle (e.g., fire and medical) access and public services and utilities (e.g., fire protection, police protection, potable water, schools, solid waste collection and disposal, storm drainage, wastewater collection, treatment, and disposal, etc.), to ensure that the requested zoning designation and the proposed or anticipated uses and/or development will not endanger, jeopardize, or otherwise constitute a hazard to the property or improvements in the vicinity in which the property is located.**

   The Project site is physically suitable for the proposed Residential Low Density (RL) zoning designation in terms of design, location, shape, size, and operating characteristics. The site is of sufficient size and configuration to accommodate the proposed residential development, including internal circulation, open space, and required infrastructure.

   The Project is located adjacent to existing and planned residential development and represents a logical extension of the surrounding land use pattern. The proposed street network is designed to provide adequate access for residents, service providers, and emergency response vehicles and will be subject to review and approval by the City's Engineering Department and Riverside County Fire Department.

   Adequate public services and utilities are available, or will be provided, to serve the Project, including potable water, wastewater, storm drainage, solid waste services, and schools. The Project has been reviewed by relevant agencies and departments to ensure that the proposed zoning and anticipated development will not endanger or otherwise constitute a hazard to surrounding properties or improvements.

PLANNED DEVELOPMENT PERMIT:

1. **The Planned Development Permit will:**

   a. **Be allowed within the subject base zone;**

   The Project includes a Change of Zone to the Residential Low Density (RL) zone. The RL zone is intended to accommodate detached single-family residential development, along with accessory uses and other compatible uses, at a density range of 2.1 to 7.0 dwelling units per acre.

   The Planned Development Permit is an allowed entitlement within the RL zone and is intended to provide flexibility from standard development requirements in order to achieve superior site design and

community planning. Accordingly, the Planned Development Permit is permitted within the proposed base zone.

b. Be consistent with the purpose, intent, goals, policies, actions, and land use designations of the General Plan and any applicable specific plan.

The Project site is proposed to be designated Low Density Residential (LDR) under the General Plan, which permits detached single-family residential development at a density of 2.1 to 7.0 dwelling units per acre. The Project proposes a density of 5.53 dwelling units per acre, which is within the allowable range and consistent with the intended use of the LDR designation. The Project site is not located within a Specific Plan area.

The Project is consistent with the purpose and intent of the General Plan by facilitating a well-planned residential community that balances efficient land use with neighborhood compatibility and access to amenities. The Planned Development Permit allows for modifications to development standards that support a cohesive site design while maintaining consistency with the overall density and character envisioned by the General Plan.

The Project implements applicable General Plan goals and policies, including:

- Land Use Policy LU-1.6, by incorporating an integrated system of open space and recreational amenities, including multiple parks, paseos, and gathering areas that support community interaction and outdoor activity;

- Land Use Policy LU-4.4, by promoting pedestrian-oriented design through internal walkways, paseo connections, and access to the Class I multi-use trail along Esplanade Avenue; and

- Land Use Policy LU-5.4, by providing well-designed, multi-functional open spaces, including neighborhood parks and a basin park, that serve a variety of recreational and community needs.

Based on the foregoing, the Planned Development Permit is consistent with the purpose, intent, goals, policies, and land use designations of the General Plan.

c. Be generally in compliance with all of the applicable provisions of this Development Code relating to both on-site and off-site improvements that are necessary to accommodate flexibility in site planning and property development and to carry out the purpose, intent, and requirements of this Chapter and the subject base

zone, including prescribed development standards and applicable design guidelines, except for those provisions modified in compliance with this Chapter.

The Project is compliant with the Provisions of the Development Code relating to on-site and off-site improvements. The Project's off-site improvements will include a Class 1 Multi-Use along Esplanade Avenue as required per the Trails Master Plan. Additionally, the Project will be conditioned to dedicate and provide improvement along Esplanade Avenue, Cawston Avenue, and Seventh Street. On-site improvements will include 3.26-acres of open space amenities and connections to the proposed Class I Multi-Use Trail. The proposed modified development standards for the Project will accommodate flexibility in site planning and property development, while still upholding the intentions and goals of the Development Code by creating a cohesive neighborhood community. Therefore, the Project is found to be compliant with all the applicable provisions of the development code relating to both on-site and off-site improvements.

d. Ensure compatibility of property uses within the zone and general neighborhood of the proposed development.

The Project will include single-family residential uses and complementary recreational and open space areas. The combination of uses is generally considered compatible and will create a cohesive residential neighborhood. The development of the Class I Multi-Use Trail will continue the intent of creating an integrated trails network throughout the City and will serve as an amenity for residents nearby and within the development. The Project site is bound by residential uses.

The surrounding land uses designations include: Specific Plan to the west, Low Density Residential to the north, Very Low Density Residential to the east, and City of Hemet to the south. Development surrounding the Project Site is planned to be of similar character, land use, and density. Therefore, the proposed Project is found to be compatible the zone and with the general neighborhood of the proposed development.

2. The proposed project will produce a comprehensive development of superior quality and excellence of design (e.g., appropriate variety of structure placement and orientation opportunities, appropriate mix of structure sizes, high quality architectural design, significantly increased amounts of landscaping and improved open space, improved solutions to the design and placement of parking and loading facilities, incorporation of a program of highly enhanced amenities [e.g., additional public art], LEED or other "green" related standards, etc.) than might otherwise occur from more typical development applications;

The proposed Project includes 3.26-acres of common areas and recreational amenities. This includes play areas, turf / open space area, and picnic areas. The

Project additionally proposes to construct a Class I Multi-Use Trail along Esplanade Avenue. This trail will include a meandering six (6) foot sidewalk, landscaped parkway located on both sides of the walkway, and proposed channel. This trail will connect to the internal pedestrian paths.

The architectural styles proposed will reflect styles farm style inspired. The Project, with its architectural styles, supporting landscape palette, open spaces, and monumentation, offers a development with excellence of design. The architectural styles include Spanish, Prairie, and Farmhouse for the future 419 dwelling units, accompanied by nine (9) color schemes. The incorporation of multiple styles and color options is intended to enhance visual interest while maintaining a unified aesthetic throughout the subdivision. In addition, the PDP proposes five (5) distinct floor plans, each offering three (3) elevation types. The design of the residential lots and variation in architecture creates a diverse community and avoids a monotonous appearance.

3. **Proper standards and conditions have been imposed to ensure the protection of the public health, safety, and welfare;**

The Project Site is currently and has historically been used for agricultural purposes. Due to this fact, the environmental analysis of the Project Site included a Phase I Environmental Safety Assessment (Phase I ESA) to analyze any hazards that could result from development of the site. The Phase I ESA found that due to the historical use of this property for agricultural purposes dating back from at least 1930's, it is possible agricultural chemicals

such as pesticides and fertilizers have likely been applied to crops grown on the Proposed Project Site. Through the adoption of the Mitigation and Monitoring Program within the Conditions of Approval for the Project, any hazards that could create a significant hazard to the public or the environment through the conversion of agricultural land to residential uses will be significantly reduced to create a safe, healthy environment. Additionally, plans for the proposed residential development will be required to be submitted and approved through Site Plan and Design Review process.

Additionally, the Zoning, Fire, and Building Codes will ensure that that the development of the project will meet applicable safety standards. Therefore, it is found that with the incorporation of the above mentioned Mitigation Measures, Conditions of Approval, and the requirements of the Zoning, Fire, and Building Codes will ensure the protection of the public health, safety and welfare.

4. **Proper on-site traffic circulation (e.g., pedestrian and vehicular) and control is designed into the development to ensure protection for fire suppression and police surveillance equal to or better than what would normally be created by compliance with the minimum setback and parcel width standards identified in Article 2 (Zones, Allowable Land Uses, and Zone Specific Standards);**

The proposed Planned Development Permit incorporates a comprehensive internal circulation system designed to accommodate both vehicular and pedestrian traffic while ensuring adequate access for emergency response and

public safety services. The Project has been reviewed for compliance with applicable City standards and the requirements of the City Engineer, Riverside County Fire Department, and Sheriff's Department.

The internal street network is designed to provide efficient circulation and connectivity throughout the Project site. Roadway widths, including minimum 24-foot fire access lanes where applicable, and turning radii have been designed to accommodate emergency vehicles, service vehicles, and passenger traffic. The interconnected street system enhances accessibility for fire suppression and law enforcement response.

Pedestrian circulation is supported through sidewalks, paseos, and connections to on-site parks and adjacent improvements, including the Class I multi-use trail along Esplanade Avenue. These features promote safe and convenient pedestrian movement throughout the community.

Based on the foregoing, the Project provides proper on-site traffic circulation and control for both vehicular and pedestrian movement and ensures protection for fire suppression and police services equal to or better than that which would be achieved through strict compliance with standard development requirements.

5. **The subject parcel is adequate in terms of size, shape, topography, and circumstances to accommodate the proposed development;**

The proposed Project Site is generally flat and is shaped to accommodate a proper lot layout. Section 17.620.020 of the Development Code states that the minimum lot size for a Planned Development Permit is 2 acres. The proposed Project site greatly exceeds this requirement and is 73.06-net acres. The proposed Project will provide an efficient use of land that will meet the purpose and intent of the Low Density Residential (LDR) General Plan land use designation by modifying the development standards to accommodate a 2-7 dwelling unit per acre development as required by the 2024 General Plan. Therefore, the subject parcel is adequate in terms of size, shape, topography, and circumstances to accommodate the proposed development.

6. **Adequate public services and facilities exist, or will be provided, in compliance with the conditions of approval, to serve the proposed development and the approval of the proposed development will not result in a reduction of public services to properties in the vicinity to be a detriment to public health, safety, and general welfare;**

Adequate public services and facilities exist, or will be provided, to serve the proposed development. The Project has been reviewed by applicable City departments and service providers, including Public Works, Public Utilities, Sheriff's Department, and Riverside County Fire Department, to ensure that the development can be adequately served.

Utility services, including potable water, wastewater, electricity, natural gas, telecommunications, and solid waste services, are available within the vicinity of the Project site or will be extended to serve the development. Eastern

Municipal Water District has indicated its willingness and ability to provide water and wastewater service to the Project.

The Project will be conditioned to ensure that all required infrastructure improvements are constructed and that service connections and applicable fees are provided prior to occupancy. Emergency access and response capabilities have been incorporated into the Project design and will be subject to review and approval by the appropriate agencies.

Based on the foregoing, adequate public services and facilities exist, or will be provided, to serve the Project, and the proposed development will not result in a reduction of service levels to surrounding properties.

7. **The proposed development, as conditioned, will not have a substantial adverse effect on surrounding property or their allowed use;**

The proposed development will not have a substantial adverse effect on surrounding properties or their allowed uses. The Project is consistent with the General Plan and zoning designations of the surrounding area and represents a logical extension of existing and planned residential development.

The Project has been designed to be compatible with adjacent uses through site planning, building placement, and the incorporation of landscaping, open space, and internal circulation. The transition from the Project site to surrounding properties is appropriate for the area, whether adjacent lands remain in agricultural use or develop in accordance with the General Plan.

The Project is subject to Conditions of Approval and compliance with applicable Municipal Code requirements, including noise, lighting, and traffic standards, as well as the California Building Code and Fire Code. These requirements are intended to prevent nuisances and ensure that the development does not create adverse impacts on surrounding properties.

Based on the foregoing, the proposed development, as conditioned, will not have a substantial adverse effect on surrounding property or their allowed use.

8. **If the development proposes to mix residential and commercial uses whether done in a vertical or horizontal manner, the residential use is designed in a manner that it is appropriately buffered from the commercial use and is provided sufficiently enhanced amenities to create a comfortable and healthy residential environment and to provide a positive quality of life for the residents. The enhanced amenities may include additional landscaping, additional private open space, private or separated entrances, etc;**

The Project does not propose a mix of residential and commercial uses as the project does not include Commercial uses.

9. **The design, location, operating characteristics, and size of the proposed development will be compatible with the existing and future land uses in the vicinity, in terms of aesthetic values, character, scale, and view protection; and**

This project will have the appropriate buffers such as exterior walls and perimeter landscaping to ensure that it will be compatible with any future land use whether it remains agricultural, develops with Residential, Commercial or a project that integrates both, in accordance with the General Plan.

10. **The applicant agrees in writing to comply with any and all of the conditions imposed by the review authority in the approval of the Planned Development Permit.**

    The Applicant has agreed with all of the conditions imposed by the review authority prior to the issuance of any permits or recordation of any documents.

SUBDIVISION (TTM 39076):

1. **The proposed subdivision of land has been found to be consistent with the Development Code, General Plan, and the San Jacinto Municipal Code.**

   The proposed Tentative Tract Map (TTM 39076) is consistent with the San Jacinto Municipal Code and has been reviewed in accordance with the applicable provisions of Titles 16 and 17. The Project includes a Planned Development Permit to allow limited, controlled modifications to the development standards of the Residential Low Density (RL) zone, which are intended to facilitate a cohesive and well-designed residential community.

   Upon approval of the General Plan Amendment and Change of Zone, the Project will be consistent with the Low Density Residential (LDR) General Plan land use designation and the corresponding RL zoning designation. The proposed subdivision is consistent with the permitted density range and establishes a logical and orderly pattern of residential development.

   The Project implements applicable General Plan goals and policies, including:

   - Land Use Goal 2 and Policies LU-2.1 and LU-2.2, by promoting orderly and coordinated growth that is compatible with surrounding residential neighborhoods and supported by an interconnected circulation network and accessible open space; and

   - Land Use Goal 3 and Policies LU-3.1 and LU-3.2, by facilitating high-quality residential development that is compatible with adjacent land uses and incorporates design features that enhance neighborhood character and connectivity.

   Based on the foregoing, the proposed subdivision is consistent with the Development Code, General Plan, and Municipal Code.

2. **The tentative map does not propose to divide land which is subject to a contract entered into pursuant to the California Land Conservation Act of 1965, or the land is subject to a Land Conservation Act contract but the**

resulting parcels following division of the land will be of an adequate size to sustain their agricultural use

The project site is not subject to a contract pursuant to the California Land Conservation Act of 1965 as detailed in the analysis completed through the Mitigated Negative Declaration document. In addition, the projects title report did not have indication of a Williamson Act Contract.

3. **The site is physically suitable for the type and proposed density of development proposed by the tentative map.**

The Project site is physically suitable for the proposed subdivision of 419 single-family residential lots. The proposed use is consistent with the Residential Low Density (RL) zoning designation and the Low Density Residential (LDR) General Plan land use designation, which permits residential development within the proposed density range.

The site is of sufficient size and configuration to accommodate the proposed subdivision, including residential lots, internal circulation, and open space areas. The Project represents a logical expansion of existing and planned residential development in the surrounding area, including neighborhoods to the north, east, and west.

The Project site has access to existing and planned infrastructure necessary to support the proposed development, including potable water, wastewater, natural gas, and electrical services, which are available within adjacent roadways. The site is also located in proximity to existing community amenities, including parks and schools, which support the residential character of the Project.

Based on the foregoing, the site is physically suitable for the type and density of development proposed.

4. **The design of the subdivision and the proposed improvements, with conditions of approval, are either:**

   a. **Not likely to cause significant environmental damage or substantially and avoidably injure fish or wildlife or their habitat; or**

      An Initial Study was prepared for the Project in accordance with the California Environmental Quality Act (CEQA) to evaluate potential environmental impacts. The Initial Study determined that, with the incorporation of mitigation measures, the Project will not have a significant effect on the environment, including impacts to biological resources such as fish and wildlife and their habitat.

      All mitigation measures identified in the Initial Study have been incorporated into the Project and will be implemented through the Mitigation Monitoring and Reporting Program. Accordingly, the design

of the subdivision and proposed improvements is not likely to cause significant environmental damage or substantially and avoidably injure fish or wildlife or their habitat.

b. An environmental impact report under which a finding has been made pursuant to Public Resources Code Section 21081(a)(3) that specific economic, social, or other considerations make infeasible mitigation measures or project alternatives identified in the environmental impact report.

The project's impacts were not significant enough to require the preparation of an environmental impact report. A Mitigated Negative Declaration was prepared for the Project to assess any significant environmental impacts, and it was determined that a Mitigated Negative Declaration is the appropriate level of environmental document. Therefore, findings pursuant to Public Resources Code Section 21081(a)(3) are not necessary.

5. The design of the subdivision of land and the type of improvements are not likely to cause serious public health problems.

The implementation of the proposed conditions will ensure that the Project will not be detrimental to the public interest, health, safety, convenience, or welfare of the City or the future residents of the development. As previously mentioned, a Mitigated Negative Declaration was prepared for the proposed subdivision, which analyzed items that can cause public health problems such as Air Quality, Hazardous Materials, and Utilities. It was determined through the environmental document that with incorporation of mitigation measures, the impacts to public health problems would be less than significant

6. That design of the subdivision provides for future passive or natural heating or cooling opportunities in the subdivision to the extent feasible.

The design of the subdivision will provide for future passive cooling opportunities with the implementation of building setbacks, lot coverage requirements, landscaping requirements, including required street trees, and open space areas. This can also include configuration to permit orientation of a structure to take advantage of shade and prevailing breezes. Furthermore, natural heating opportunities can be provided with orientation of a structure in an east-west alignment for southern exposure.

The proposed project is a subdivision and Planned Development Permit, subsequent development will be analyzed and conditioned through a Site Plan and Design Review. As part of the Site Plan and Design Review process, the Planning Department will ensure that natural heating and cooling opportunities are explored to the extent feasible and condition the project accordingly.

7. **The design of the subdivision and the type of improvements will not conflict with easements acquired by the public at large for access through or use of property within the proposed subdivision, or the design of the alternate easements which are substantially equivalent to those previously acquired by the public will be provided.**

   Per the title report provided by the project applicant, the site consists of two easements for a right-of-way over a strip of land 30 feet wide located outside the property line on Cawston Avenue. The second easement is granted to Easter Municipal Water District for sewage transmission and collection facilities. This easement is located outside the property lines along Cawston Avenue. These two easements are shown in the Tentative Tract Map and will not conflict with the development of the proposed Project.

8. **The subdivision is consistent with the City's parkland dedication requirements (per the Quimby Act), as applicable, in accordance with Chapter 16.75 (Parkland Dedication and Fees).**

   The proposed subdivision is consistent with the City's parkland dedication requirements pursuant to Chapter 16.75 of the San Jacinto Municipal Code. The Project provides approximately 3.26 acres of usable parkland within designated park lots, which contributes toward satisfying the City's parkland dedication requirement.

   Any remaining parkland obligation will be satisfied through the payment of in-lieu fees, in accordance with Chapter 16.75, as required by the Conditions of Approval.

   Based on the foregoing, the Project complies with the City's parkland dedication requirements.

SECTION 3. Based on the entire record before the City Council and all written and oral evidence presented, the City Council finds the Application complies with CEQA for the following reasons:

An environmental analysis has been conducted which evaluated information and impacts based on the specifics of this proposed project. This analysis determined that, although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent and other effects will be mitigated to a level of less than significant impact. Therefore, a Mitigated Negative Declaration and its associated Mitigation Monitoring Plan is recommended.

SECTION 4. The location and custodian of the documents and any other material which constitute the record of proceedings upon which the City Council based its decision is as follows: Community Development Director, City of San Jacinto Planning Department, 595 San Jacinto Ave, San Jacinto, CA 92583. (909) 487-7330.

SECTION 7. Effective Date. This Resolution shall become effective upon its adoption.

PASSED, APPROVED, AND ADOPTED the 21st Day of July 2026 by the following vote.

General Plan Amendment, Change of Zone, Planned Development Permit, and Tentative Tract Map 39076

Approval Date: TBD
Effective Date: TBD
Expiration Date: TBD

PROJECT LOCATION: West site of Cawston Avenue extending between Seventh Street and Esplanade Avenue
San Jacinto, CA APN: 432-260-009, 432-260-026, 432-260-027

APPLICANT: **Chacon, LLC**
2451 Ramona Expressway
San Jacinto, CA 92582

ACCEPTED AND AGREED TO BY: _____

Applicant (signature) Date

PROJECT DESCRIPTION

A General Plan Amendment from Very Low Density Residential to Low Density Residential; a Change of Zone from Rural Residential to Residential Low Density; approval of a Planned Development Permit and Tentative Tract Map 39076 to subdivide three parcels into 419 single-family residential lots on approximately 73.97 gross acres, including on-site roadways, parks, a detention basin, and landscaping.

General Requirements & Information

A. To the extent permitted by law the applicant/licensee shall by accepting these conditions agree to defend (with legal counsel of City's selection), indemnify, and hold harmless the City and its elected and appointed officials, agents, attorneys, employees and officers, from any action, claim or proceeding brought by any party other than the applicant/licensee against the City or its elected and appointed officials, agents, employees and officers to attack, set aside, void, or annul a discretionary land use approval of the City, which action is brought within the applicable statute of limitations. The required indemnification shall include damages awarded against the City, if any, costs of suit, attorneys' fees and other costs and expenses incurred in connection with the action. The City shall promptly notify the applicant/licensee of any such claim, action, or proceeding and cooperate fully in the defense.

B. The residential subdivision shall comply with all required development standards of the Development Code and the Planned Development Permit (PDP). When a conflict between the Development Code and the PDP exists, the PDP standards will supersede the Development Code

C. An SB 330 Preliminary Application was submitted for this development and became effective on March 31, 2025 (the "Vesting Date"), which is the date the applicant submitted a complete application pursuant to Government Code Section 65941.1. **The City will utilize the development standards and fees in effect on March 31, 2025**.

D. The residential subdivision shall comply with the Subdivision Map Act (Government Code Section 66410 et seq.) and Title 16 (Subdivisions) of the Municipal Code.

E. The effective date of Tentative Tract Map 39076 is ten (10) days following the approval date. The approval will lapse if a final map has not recorded within three (3) years from the date upon which the approval was granted. Unless a time extension is approved by the City's applicable review authority, applications for time extensions must be received prior to the expiration date. The filing of a final map for phase 1 of the Tentative Tract Map shall extend the life of the remaining portion of the Tentative Tract Map consistent with Government Code section 66452.6. The Tentative Tract Map may be recorded in phases in a manner consistent with the phasing map.

F. The developer/applicant or successor in interest shall pay any outstanding planning application or processing fees within ten (10) days of City's request therefore and prior to permits being exercised. Failure to do so will be grounds for Code Enforcement actions, revocation, or further legal action.

G. The Project shall fully and continually comply with all applicable conditions of approval, State, Federal, and local laws in effect at the time the permit is approved and exercised, and which may become effective and applicable thereafter. Failure to do so will be grounds for Code Enforcement actions, revocation, or further legal action.

H. This permit shall run with the land associated to the project/permit and continues to be valid upon change of ownership. All applicable conditions of approval shall continue to apply with a change in property ownership.

I. All plans submitted to the City shall be in substantial conformance with the plans in this approval as conditioned. This condition applies to site plans, grading plans, landscape plans, building plans, elevations, and all other illustrations, text, or plans submitted to the City in connection with the Project.

J. The approved entitlement cannot be legally conducted on the subject property until all applicable conditions of approval have been met to the satisfaction of the Planning Department.

K. The applicant shall be subject to all applicable development fees. Such fees may include, but not be limited to Development Impact Fees, Park Fees, School Fees, Transportation Uniform Mitigation Fees, and Multiple Species Habitat Conservation Plan Fees.

L. Signs shall be permitted in accordance with Chapter 17.335 – Sign Regulations of the Development Code in effect on the Vesting Date. Any signs, including exterior-mounted, monument, and window signs, shall be subject to separate review and assessment. A separate sign application, including fees and additional sets of plans, will be necessary prior to sign permit issuance.

M. The City shall have the right to inspect the site and facilities to ensure compliance with the conditions of approval and to recover its actual costs related to such inspections from the property owner or tenant.

N. Site Plan and Design Review (SPDR) for construction of the dwelling units shall ensure that all lumber scraps, combustible materials, and other debris be picked up daily, or more often as required by the Building and Safety Division.

O. All existing and new utilities adjacent to and on the Project site shall be located underground as per City of San Jacinto Municipal Code Section 15.32.

P. In the event of a conflict between any conditions for this approval, the most restrictive regulations shall apply.

Q. The contractor shall comply with the following best practices during the construction phase of the development.

- The erection (including excavation), demolition, alteration or repair of any building shall occur between the **hours** of seven a.m. and seven p.m. on weekdays and Saturdays, and between 9:00 a.m. and 6:00 p.m. on Sundays and holidays, except when such work complies with the terms of a temporary use permit which may be issued by the community development director or his or her designee, upon a showing of sufficient need due to hot or inclement weather, or the use of an unusually long process material, or other circumstances of unusual and compelling nature.

- During the entire active construction period, equipment and trucks used for the project construction shall utilize the best available noise control techniques (e.g., improved mufflers, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds), wherever feasible.

- During the entire active construction period, stationary noise sources shall be located as far from sensitive receptors as possible, and they shall be incorporated to the extent feasible.

- Select haul routes that avoid the greatest amount of sensitive use areas. Avoid soil hauling through residential areas.

- Signs shall be posted at the job site entrance(s), within the on-site construction zones, and along queueing lanes (if any) to reinforce the prohibition of unnecessary engine idling. All other equipment shall be turned off if not in use for more than 5 minutes.

- Equipment shall be maintained and operated such that loads are secured from rattling or banging.

R. A copy of all pages of these Conditions shall be included in the construction drawing packages for grading plans and building permits, including landscaping permits.

S. During the entire active construction period and to the extent feasible, the use of noise-producing signals, including horns, whistles, alarms, and bells, shall be for safety warning purposes only. The construction manager shall use smart back-up alarms, which automatically adjust the alarm level based on the background noise level, or switch off back-up alarms and replace them with human spotters in compliance with all safety requirements and laws.

T. A grading permit shall be obtained from the City of San Jacinto prior to the commencement of any grading outside of the City-maintained Road right-of-way.

U. The Project is required to comply with San Jacinto Development Code Section 17.300.080 which requires all exterior lighting to be shielded or modified and located so as to eliminate spillover illumination or glare beyond the property line or upward into the sky.

Engineering Department General Requirements & Information

V. With respect to the Conditions of Approval for the above referenced project, the City of San Jacinto requires that the developer/property owner provides the following street improvements and/or road dedications in accordance with the City of San Jacinto Municipal Code. It is understood that the site plan correctly shows all existing and proposed easements, traveled ways, rights-of-way, and drainage courses with appropriate Q's and their omission may require the site plan to be resubmitted for further consideration. These ordinances and the following conditions are essential parts and requirement occurring in ONE is as binding as though occurring in all. They are intended to be complimentary and to describe the conditions for a complete design of the improvements. Unless otherwise noted, all offsite improvements as conditioned shall be installed prior to issuance of any occupancy permits. All questions regarding the true meaning of the conditions shall be referred to the City Engineer's office. In the event of a conflict between any conditions stated below, those imposed by Planning Department and others, and requirements identified in the approved Traffic impact Analysis, the most stringent in the opinion of the City shall prevail.

W. The project grading shall be in a manner to perpetuate existing natural patterns. Any deviation from this, concentration or increase in runoff must have approval of adjacent property owners and City Engineer. The developer/property owner shall accept the offsite runoff and convey to acceptable outlet.

X. Prior to commencement of any construction or installation of fencing in public right-of-way, an encroachment permit shall be obtained from the City Engineer's office.

Y. The developer/property owner shall secure City's and appropriate agencies' clearances and approvals of the improvement plans.

Timing	Responsible Department	Prior to Recordation of the Final Map (Phase 1)	Met?
Prior to Recordation of the Final Map Phase 1	Planning	1) The Final Map shall accurately depict the Typical Rear Yard sections within the PDP.	☐
Prior to Recordation of the Final Map Phase 1	Planning	2) The developer/applicant shall prepare CC&R's for City review and approval. The CC&R's shall include a provision for maintenance of the common spaces within the subdivision and shall include a provision allowing the increase of fees to ensure continued maintenance of all common and public areas in the event any assessment district is reduced or eliminated. A Homeowners Association (HOA) shall be established to enforce the CC&Rs, and to provide ongoing maintenance of the parking areas, park, basins and landscaped areas.	☐
Prior to Recordation of the Final Map Phase 1	Engineering	3) A final map shall be filed for review and approval and shall be recorded.	☐
Prior to Recordation of the Final Map Phase 1	Engineering	4) The developer/property owner shall have approved improvement plans, executed subdivision improvement agreement, and posted securities for the public improvements.	☐

Timing	Responsible Department	Prior to Recordation of the Final Map (Phase 1)	Met?
Prior to Recordation of the Final Map Phase 1	Engineering	5) A total of 52 feet (52') shall be dedicated for all interior streets within Phase 1 and will be privately maintained.	☐
Prior to Recordation of the Final Map Phase 1	Engineering	6) A total of 56 feet (56') shall be dedicated for Street "A", a privately maintained street.	☐
Prior to Recordation of the Final Map Phase 1	Engineering	7) A total of 80 feet (80') shall be dedicated for the Street "K" entry, a privately maintained street.	☐
Prior to Recordation of the Final Map Phase 1	Engineering	8) Seventh Street is classified as a Major per the City General Plan. A 30-foot wide halfwidth right-of-way is currently dedicated along the property's northerly frontage. The developer/property owner shall dedicate the required additional 20 feet (20') of right-of-way to provide for a 50-foot wide halfwidth right-of-way.	☐
Prior to Recordation of the Final Map Phase 1	Engineering	9) Cawston Avenue is classified as a Major per the City General Plan. A 30-foot wide halfwidth right-of-way is currently dedicated along the property's easterly frontage. The developer/property owner shall dedicate the required additional 20 feet (20') of right-of-way to provide for a 50-foot wide halfwidth right-of-way.	☐

Timing	Responsible Department	Prior to Recordation of the Final Map (Phase 1)	Met?
Prior to Recordation of the Final Map Phase 1	Engineering	10) Property line corner cutbacks shall be dedicated per County of Riverside Standard No. 805.	☐
Prior to Recordation of the Final Map Phase 1	Engineering	11) All easements and/or public street rights-of-way shall be offered for dedication to the public or other appropriate agencies in perpetuity and shall continue in force until the City or the appropriate agency accepts or abandons such offers.	☐
Prior to Recordation of the Final Map Phase 1	Engineering	12) The developer/property owner shall sign the consent and waiver form to join the City's Flood Control District as appropriate. The proposed streetlights and traffic signals shall be maintained by the City and cost paid by the developer/property owner through the said annexation.	☐
Prior to Recordation of the Final Map Phase 1	Engineering	13) The developer/property owner shall submit the following to the City Engineer for review and approval: • Street Improvement Plans • Street Light Plans prepared by a registered Electrical Engineer • Signing and Striping, Traffic Signal Plans as appropriate • Onsite Grading and Erosion Control Plans – Plans shall show the approved WDID No. • Geotechnical Report (for reference) • Sewer and Water Plans • Storm Drain Improvement Plans • Hydrology and Hydraulic Analysis • Final WQMP (for reference) including WDID No.	☐

Timing	Responsible Department	Prior to Recordation of the Final Map (Phase 1)	Met?
		• Traffic Signal Plan The design shall comply with Eastern Municipal Water District (EMWD), Fire Department, Riverside County Flood Control and Water Conservation District (RCFCD), Riverside County Transportation Department, Caltrans, City of San Jacinto and ADA most recent standards, criteria, and requirements and in effect at the time of construction and shall be coordinated with the approved plans of the adjacent developments.	
Prior to Recordation of the Final Map Phase 1	Engineering	14) The following statement shall be added to the Final Map: NOTICE OF DRAINAGE FEES – Notice is hereby given that this property is located in San Jacinto Valley Area Drainage Plan which was adopted by the City of San Jacinto pursuant to Ordinance 13-01 and Section 66001, et seq, of the Government Code and that said property is subject to fees for said drainage area. Notice is further given that, pursuant to Ordinance 13-01, payment of the drainage fees shall be paid to the City of San Jacinto prior to issuance of the building permit for a parcel, and that the property owner shall pay the fee required at the rate in effect at the time of issuance of the actual permit.	☐
Prior to Recordation of the Final Map Phase 1	Special Districts	15) Establish a funding mechanism for the maintenance of public improvements. • One such mechanism is annexation into the Public Facilities Maintenance Community Facilities District (CFD) is an option to fulfill the funding requirement for maintenance of public improvements. If a property owner opts to annex into a CFD, the annexation must be finalized in order to satisfy this condition.	☐

Timing	Responsible Department	Prior to Recordation of the Final Map (Phase 1)	Met?
Prior to Recordation of the Final Map Phase 1	Special Districts	16)Establish a funding mechanism for the public safety services. • One such mechanism is annexation into the Public Safety Community Facilities Districts (CFD) is an option to fulfill the funding requirement for public safety services. Funding of services under the City's CFDs will consist of an annual assessment based on the costs of such services, as determined by a City's Engineer's Estimate and established by tax zone.	☐

Timing	Responsible Department	Prior to Recordation of the Final Map (Phase 2)	Met?
Prior to Recordation of the Final Map Phase 2	Engineering	17)A final map for phase 2 shall be filed for review and approval and shall be recorded.	☐
Prior to Recordation of the Final Map Phase 2	Engineering	18)The developer/property owner shall have approved improvement plans, executed subdivision improvement agreement, and posted securities for the public improvements.	☐
Prior to Recordation of the Final Map Phase 2	Engineering	19)A total of 52 feet (52') shall be dedicated for all interior streets withing phase 2. Interior Streets will be privately maintained.	☐

Timing	Responsible Department	Prior to Recordation of the Final Map (Phase 2)	Met?
Prior to Recordation of the Final Map Phase 2	Engineering	20) Esplanade Avenue is classified as an Arterial per the City General Plan. A 56-foot wide halfwidth right-of-way is currently dedicated along the property's southerly frontage. The developer/property owner shall dedicate the required additional 17 feet (17') of right-of-way to provide for a 73-foot wide halfwidth right-of-way with Phase 2.	☐
Prior to Recordation of the Final Map Phase 2	Engineering	21) Property line corner cutbacks shall be dedicated per County of Riverside Standard No. 805.	☐
Prior to Recordation of the Final Map Phase 2	Engineering	22) All easements and/or street rights-of-way shall be offered for dedication to the public or other appropriate agencies in perpetuity and shall continue in force until the City or the appropriate agency accepts or abandons such offers.	☐
Prior to Recordation of the Final Map Phase 2	Engineering	23) The developer/property owner shall sign the consent and waiver form to join the City's Lighting and Landscape Districts and City's Flood Control District as appropriate. The proposed streetlights and traffic signals shall be maintained by the City and cost paid by the developer/property owner through the said annexation.	☐
Prior to Recordation of the Final Map Phase 2	Engineering	24) The developer/property owner shall submit the following to the City Engineer for review and approval: • Street Improvement Plans • Street Light Plans prepared by a registered Electrical Engineer • Signing and Striping, Traffic Signal Plans as appropriate • Onsite Grading and Erosion Control Plans – Plans shall show the	☐

Timing	Responsible Department	Prior to Recordation of the Final Map (Phase 2)	Met?
		approved WDID No. • Geotechnical Report (for reference) • Storm Drain Improvement Plans • Hydrology and Hydraulic Analysis • Final WQMP (for reference) including WDID No. • Traffic Signal Plan The design shall comply with Eastern Municipal Water District (EMWD), Fire Department, Riverside County Flood Control and Water Conservation District (RCFCD), Riverside County Transportation Department, Caltrans, City of San Jacinto and ADA most recent standards, criteria, and requirements and in effect at the time of construction and shall be coordinated with the approved plans of the adjacent developments.	
Prior to Recordation of the Final Map Phase 2	Engineering	25) The following statement shall be added to the Final Map: NOTICE OF DRAINAGE FEES – Notice is hereby given that this property is located in San Jacinto Valley Area Drainage Plan which was adopted by the City of San Jacinto pursuant to Ordinance 13-01 and Section 66001, et seq, of the Government Code and that said property is subject to fees for said drainage area. Notice is further given that, pursuant to Ordinance 13-01, payment of the drainage fees shall be paid to the City of San Jacinto prior to issuance of the building permit for a parcel, and that the property owner shall pay the fee required at the rate in effect at the time of issuance of the actual permit.	☐

Timing	Responsible Department	Prior to a Specific Date	Met?
30-days Prior to Grading	Planning	26) **Mitigation Measure BIO-1**: Burrowing Owl Pre-Construction Surveys. The Project Applicant shall retain a qualified Biologist to conduct a pre-construction survey for burrowing owl on the Proposed Project Site (and including adjacent areas within 500 feet to the extent possible) within 30 days prior to construction. Methods for the pre-construction surveys shall be conducted as a one-day focused survey following the Burrowing Owl Survey Instructions for the Western Riverside Multiple Species Habitat Conservation Plan (MSHCP 2006). Following the survey, the Biologist shall prepare a Memorandum/Letter Report describing the methods and results of the survey for submittal to the City. If burrowing owl are observed, the Report shall also make recommendations for avoidance and minimization measures depending on the timing of construction and the location of the active burrow with respect to planned activities. If burrowing owl are observed, the Project Applicant (or their designee) shall contact the City to discuss avoidance and minimization options. During the breeding season (i.e., March 1 to August 31), restrictions shall be placed on construction activities in the vicinity of any active burrow until the burrow is no longer active, as determined by a qualified Biologist. The protective buffer shall be 500 feet (or as otherwise approved by the City) around the active burrow. The protective buffer shall be flagged clearly in the field, mapped as an “Environmentally Sensitive Area,” and the maps provided to the Project Applicant, their designee (e.g., Construction Supervisor), and the City. During the wintering season, an active burrow may be closed following CDFW-approved procedures with permission from the City. If the wintering burrow would not be directly impacted, a protective buffer of 160 feet (or as otherwise approved by the City) shall be placed around the burrow. The protective buffer shall be flagged clearly in the field, mapped as an “Environmentally Sensitive Area,” and the maps	☐

Timing	Responsible Department	Prior to a Specific Date	Met?
		provided to the Project Applicant, their designee (e.g., Construction Supervisor), and the City. The Project Applicant shall not proceed with construction until the avoidance and minimization measures have been approved by the City and all appropriate protections are in place.	
Three days prior to Grading	Planning	27) Mitigation Measure BIO-2. Nesting Bird Survey. To the extent possible, vegetation removal will be conducted during the non-breeding season (September 12 to January 31)1 in order to minimize direct impacts on nesting birds and raptors. If construction activities would be initiated during the peak breeding season for nesting birds/raptors (February 1–June 30), a preconstruction survey will be conducted by a qualified Biologist within three days prior to the initiation of construction (including demolition of structures). The nesting bird/raptor survey area will include a buffer of 100 feet around the work area for nesting birds and a buffer of 500 feet around the work area for nesting raptors. This survey can be combined with the pre-construction burrowing owl survey described in MM BIO-1. If the Biologist does not find any active nests in or immediately adjacent to the impact area, construction activities can proceed. If the Biologist detects an active nest within or immediately adjacent to the construction area and determines that the nest may be impacted, or breeding activities substantially disrupted by increased activity around the nest, the Biologist will determine an appropriate protective buffer around the nest depending on the sensitivity of the species and the nature of the construction activity. The protective buffer shall be between 25 to 100 feet for nesting birds and 300 to 500 feet for nesting raptors. No work will be allowed within the protective buffer until nesting activity has ended, as determined by a qualified Biologist. Any protective buffers will be flagged clearly in the field, mapped as “Environmentally Sensitive Areas,” and the maps provided to the Project Applicant, their designee (e.g., Construction	☐

		Supervisor), and the City. Construction can proceed within the protective buffer when the qualified Biologist has determined that the nest is no longer active (i.e., fledglings have left the nest, or the nest has failed).	

Timing	Responsible Department	Prior to Issuance of Grading Permit	Met?
Prior to Issuance of Grading Permit	Planning	28) A grading permit shall be obtained from the City of San Jacinto prior to the commencement of any grading outside of the City-maintained road right-of-way.	☐
Prior to Issuance of Grading Permit	Planning	29) A copy of all pages of these Conditions shall be included in the construction drawing packages for grading plans.	☐
Prior to Issuance of Grading Permit	Planning	30) All imported soils/fill shall be tested to ensure Contaminants of Concern (COC's) meet the applicable screening levels as outlined in DTSC's Preliminary Endangerment Assessment Guidance Manual. The applicant/developer shall provide the following to the Planning Department for review: a. Report of testing performed. b. Documentation of the origins of the soil/fill material, if applicable, sampling be conducted to ensure that the imported soil/fill material are suitable for the intended land use. c. The soil sampling should include analysis based on the source of the soil/fill and knowledge of prior land use.	☐
Prior to Issuance of Grading Permit	Planning	31) **Mitigation Measure BIO-3.** Western Riverside County Regional Conservation Authority Multiple Species Habitat Conservation Plan (MSHCP) Fee. Prior to the issuance of a grading permit, the Project Applicant shall pay the MSHCP mitigation fee as directed by the City of San Jacinto based on the most current rates.	☐

Timing	Responsible Department	Prior to Issuance of Grading Permit	Met?
Prior to Issuance of Grading Permit	Planning	32) **Mitigation Measure BIO-4.** MSHCP Construction Minimization Measures. The Project Applicant and their designee (i.e., Construction Contractors) shall follow required MSHCP Construction Minimization Measures (Section 7.5.3 of the MSHCP). Applicable construction minimization measures are listed below. Plans for water pollution and erosion control will be prepared for all Discretionary Projects involving the movement of earth in excess of 50 cubic yards. The plans will describe sediment and hazardous materials control, dewatering or diversion structures, fueling and equipment management practices, use of plant material for erosion control. Plans will be reviewed and approved by the City prior to construction. Timing of construction activities will consider seasonal requirements for breeding birds and migratory non-resident species. Habitat clearing will be avoided during species active breeding season defined as March 1 to June 30. Sediment and erosion control measures will be implemented until such time soils are determined to be successfully stabilized.	☐
Prior to Issuance of Grading Permit	Planning	33) **Mitigation Measure CUL-1.** Archaeological Monitor. The Project proponent shall retain a Project Archaeologist prior to the initiation of ground-disturbing activities to monitor ground-disturbing activities occurring within native sediment (in situ material). In the event that archaeological resources are discovered at the Proposed Project Site, the handling of the discovered resources shall occur, as described below. All artifacts discovered shall be inventoried and analyzed by the Project Archaeologist. If any artifacts of Native American	☐

Timing	Responsible Department	Prior to Issuance of Grading Permit	Met?
		origin are discovered, all activities in the immediate vicinity of the find (within a 50-foot radius) shall stop, and the Project Archaeologist shall notify the property owner and tribes identified by the NAHC as being affiliated with the area. The Project Archaeologist and Tribal Representative will analyze the Native American artifacts for identification as everyday life and/or religious or sacred items, cultural affiliation, temporal placement, and function, as deemed possible. The significance of Native American resources shall be evaluated in accordance with the provisions of CEQA and shall consider the religious beliefs, customs, and practices of the affiliated tribes. All items found in association with Native American human remains shall be considered grave goods or sacred in origin and subject to special handling. Non-Native American artifacts shall be inventoried, assessed, and analyzed for cultural affiliation, personal affiliation (prior ownership), function, and temporal placement. After analysis and reporting, these artifacts shall be subjected to curation or returned to the property owner, as deemed appropriate. Once grading activities have ceased or the Project Archaeologist, in consultation with the lead agency and Tribal Representative, determines that monitoring is no longer necessary, monitoring activities can be discontinued. A report of findings, including an itemized inventory of recovered artifacts, shall be prepared upon completion of the steps outlined above. A copy of the report shall also be filed with the EIC.	

Timing	Responsible Department	Prior to Issuance of Grading Permit	Met?
Prior to Issuance of Grading Permit	Planning	34) **Mitigation Measure CUL-2.** Discovery of Human Remains. All discovered human remains shall be treated with respect and dignity. California State law (California Health & Safety Code Section 7050.5) and federal law and regulations ([Archaeological Resources Protection Act 16 United States Code (USC) 470 & 43 Code of Federal Regulations (CFR) 7], [Native American Graves Protection & Repatriation Act 25 USC 3001 & 43 CFR 10] and [Public Lands, Interior 43 CFR 8365.1–7]) require a defined protocol if human remains are discovered in the State of California regardless of whether the remains are modern or archaeological in origin. If human remains, grave goods, ceremonial items, and/or sacred items are encountered, work will immediately halt within the immediate area and any nearby area reasonably suspected to overlie adjacent remains, and a 100-foot ESA boundary will be established to protect the find from impact, and the Soboba Band of Luiseno Indians and the City of San Jacinto Planning Division shall be immediately notified. In accordance with Section 7050.5 of the California Health and Safety Code and CEQA Guidelines Section 15064.5(e), if human remains are found, the Riverside County Coroner's office shall be notified by the permittee within 24 hours of the discovery. County Coroner's determination regarding the origin of the remains and any required notification is described in Section 7050.5 of the California Health and Safety Code and CEQA Guidelines Section 15064.5(e). No further excavation or disturbance of the potential human remains, or any area reasonably suspected to overlie additional remains, shall occur until a determination has been made, any notifications have been sent and received, and the Riverside County Coroner's Office has cleared the site.	☐

Timing	Responsible Department	Prior to Issuance of Grading Permit	Met?
Prior to Issuance of Grading Permit	Planning	35) **Mitigation Measure GEO-1**. Paleontological Treatment Plan. In the event that potential paleontological resources are discovered during ground-disturbing activities, work will stop in that area and within 30 feet of the find until a qualified paleontologist can assess the significance of the find and, if necessary, develop appropriate treatment measures. Treatment measures may include monitoring by a qualified paleontologist during construction-related ground- disturbing activities. The monitor will retain the option to reduce monitoring if it is determined that the sediments were previously disturbed. Monitoring may also be reduced if potentially fossiliferous units are not present or, if present, are determined to have a low potential to contain fossil resources. The monitor will be equipped to salvage fossils and samples of sediments as they are unearthed and will be empowered to temporarily halt or divert equipment to allow removal of abundant or large specimens. Recovered specimens will be prepared to a point of identification and permanent preservation, including washing of sediments to recover small invertebrates and vertebrates. Specimens will be curated into a professional, accredited museum repository with permanent retrievable storage. A report of findings, with an appended itemized inventory of specimens, will be prepared and will signify completion of the mitigation.	☐

Timing	Responsible Department	Prior to Issuance of Grading Permit	Met?
Prior to Issuance of Grading Permit	Planning	36) **Mitigation Measure TCR-1:** Prior to grading permit issuance, the developer shall enter into a Treatment and Disposition Agreement (TDA) with the Soboba Band of Luiseño Indians to address treatment and disposition of archaeological, or Tribal Cultural Resources and human remains associated with the Soboba Band of Luiseño Indians that may be uncovered or otherwise discovered during ground-disturbing activities related to the project, if monitoring deemed necessary by Soboba Band of Luiseño Indians. The TDA will establish provisions for tribal monitoring and shall be submitted to the Planning Division once it has been executed.	☐
Prior to Issuance of Grading Permit	Planning	37) If the remains are determined to be prehistoric, the Coroner will notify the Native American Heritage Commission, which will determine the identity of and notify a Most Likely Descendant (MLD). With the permission of the landowner or his/her authorized representative, the MLD may inspect the site of the discovery. The MLD must complete the inspection within 48 hours of being granted access to the site. If human remains, grave goods, ceremonial items, and/or sacred items are encountered, work will immediately halt within the immediate area and any nearby area reasonably suspected to overlie adjacent remains, and a 100-foot ESA boundary will be established to protect the find from impact, and the Soboba Band of Luiseno Indians and the City of San Jacinto Planning Division shall be immediately notified. In accordance with Section 7050.5 of the California Health and Safety Code and State CEQA Guidelines Section 15064.5(e), if human remains are found, the Riverside County Coroner's office shall be notified by the permittee within 24 hours of the discovery. County Coroner's determination regarding the origin of the remains and any required notification is described in Section 7050.5 of the California Health and	☐

Timing	Responsible Department	Prior to Issuance of Grading Permit	Met?
		Safety Code and State CEQA Guidelines Section 15064.5(e). No further excavation or disturbance of the potential human remains, or any area reasonably suspected to overlie additional remains, shall occur until a determination has been made, any notifications have been sent and received, and the Riverside County Coroner's Office has cleared the site.	
Prior to Issuance of Grading Permit	Planning	38) The Migratory Bird Treaty Act (MBTA) prohibits the take (including killing, capturing, selling, trading, and transport) of protected migratory bird species without prior authorization by the Department of Interior U.S. Fish and Wildlife Service. The list of migratory bird species protected by the law is primarily based on bird families and species included in the four international conservation treaties that the U.S. entered into with Canada in 1916, Mexico in 1936, Japan in 1972, and Russia in 1976. The list of birds protected under the law can be found under Title 50 Part 10.13 of the Code of Federal Regulations. Additionally, California Fish and Game Code Section 3503.5 states that it is "unlawful to take, possess, or destroy any birds in the order Falconiformes or Strigiformes (birds of prey) or to take, possess, or destroy the nest or eggs of any such bird except as otherwise provided by this code or any regulation adopted pursuant thereto." California Fish and Game Code Section 3511 prohibits the taking of any bird listed as fully protected and Section 3515 states that is it unlawful to take any non-game migratory bird protected under the MBTA.	☐
Prior to Issuance of Grading Permit	Planning	39) A copy of all pages of these Conditions shall be included in the construction drawing packages for grading plans.	☐

Timing	Responsible Department	Prior to Issuance of Grading Permit	Met?
Prior to Issuance of Grading Permit	Planning	40) The proposed site design BMPs selected for this project have been approved in concept. The project shall submit a Final Addendum WQMP including plans and details providing the elevations and slopes of the three bioretention basins and other details for the proposed structural BMPs. The Public Works Department shall review and approve the Final WQMP document, plans and details. The Public Works Department shall review and approve the Final WQMP document, plans and details.	☐
Prior to Issuance of Grading Permit	Planning	41) The development shall be subject to all provisions of City of San Jacinto Municipal Code Chapter 13.44, which establishes Urban Stormwater Runoff Management and discharge controls to improve Water Quality and comply with Federal/State Regulations and any subsequent amendments, revisions or ordinances pertaining thereto.	☐
Prior to Issuance of Grading Permit	Planning	42) A Final Water Quality Management Plan (WQMP) shall be submitted and approved, including a project description, and identifying Best Management Practices (BMPs) that will be used on-site to reduce pollutants into the storm drain system to the maximum extent practicable. The Water Quality Management Plan shall identify the structural and non-structural measures consistent with the City's adopted requirements.	☐

Timing	Responsible Department	Prior to Issuance of Grading Permit	Met?
Prior to Issuance of Grading Permit	Planning	43) The developer/applicant or successor in interest shall prepare a Stormwater Pollution Prevention Plan (SWPPP) and obtain a Notice of Intent (NOI) to comply with obtaining coverage under the National Pollutant Discharge Elimination System (NPDES) General Construction Storm Water Permit from the State Water Resources Control Board. Evidence that this has been obtained (i.e., a copy of the Waste Discharger's Identification Number) shall be submitted to the City for coverage under the National Pollutant Discharge Elimination System General Construction Permit. **The applicant/developer shall provide documentation to the City for review.**	☐
Prior to Issuance of Grading Permit	Planning	44) The contractor shall provide a letter that agreeing to follow the City's General Plan and Noise Ordinance. In addition, the letter shall indicate the contractor shall implement the following best practices during the construction phase of the development. a. Limit construction to the daytime hours (7:00 AM to 7:00 PM) and prohibit construction on Sundays and holidays. b. At least 10 days prior to the start of construction activities, a sign shall be posted at the entrance(s) to the job site, clearly visible to the public, that includes permitted construction on days and hours, as well as telephone numbers of the City's and contractor's authorized representative that are assigned to respond in the event of a noise or vibration complaint. If the authorized contractor's representative receives a complaint, he/she shall investigate, take appropriate corrective action, and report to the City.	☐

Timing	Responsible Department	Prior to Issuance of Grading Permit	Met?
		c. During the entire active construction period, equipment and trucks used for the project construction shall utilize the best available noise control techniques (e.g., improved mufflers, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds), wherever feasible. d. During the entire active construction period, stationary noise sources shall be located as far from sensitive receptors as possible, and they shall be incorporated to the extent feasible. e. Select haul routes that avoid the greatest amount of sensitive use areas. Avoid soil hauling through residential areas. f. Signs shall be posted at the job site entrance(s), within the on-site construction zones, and along queueing lanes (if any) to reinforce the prohibition of unnecessary engine idling. All other equipment shall be turned off if not in use for more than 5 minutes. g. During the entire active construction period and to the extent feasible, the use of noise-producing signals, including horns, whistles, alarms, and bells, shall be for safety warning purposes only. The construction manager shall use smart back-up alarms, which, automatically adjust the alarm level based on the background noise level or switch off back-up alarms and replace them with human spotters in compliance with all safety requirements and laws. h. No radios or other sound equipment shall be used at this site unless required for emergency response by the contractor. i. The City shall require the developer to require that all construction equipment be operated with mandated noise control equipment (mufflers or silencers). Enforcement will be accomplished by random	

Timing	Responsible Department	Prior to Issuance of Grading Permit	Met?
		field inspections by applicant personnel during construction activities. j. Equipment not in use for five minutes shall be shut off. k. Equipment shall be maintained and operated such that loads are secured from rattling or banging. l. Construction employees shall be trained in the proper operation and use of equipment consistent with these mitigation measures, including no unnecessary revving of equipment. **The applicant / developer shall provide a letter from the contractor agreeing to implement this condition.**	
Prior to Issuance of Grading Permit	Building & Safety / Planning	45) The developer shall comply with the following requirements to the satisfaction of the Building & Safety Division: a. The site shall be watered on an on-going basis to control dust during construction and grading. b. There shall be regular street sweeping and clean up of adjacent streets to minimize the amount of dust put into the air from motor vehicle travel. c. Mud and dirt shall be removed from construction equipment and vehicles prior to leaving the site to ensure they do not spread dirt into the street. An energy conservation plan showing compliance with Title 24 (Building Standards) of the California Administrative Code shall also be provided.	☐

Timing	Responsible Department	Prior to Issuance of Grading Permit	Met?
Prior to Issuance of Grading Permit	Building & Safety / Planning	46) Stored backfill material shall be covered with water resistant material during periods of heavy precipitation to reduce the potential for rainfall erosion of stored backfill material. If covering is not feasible, then measures such as the use of straw bales or sandbags shall be used to capture and hold eroded material on the project site for future cleanup.	☐
Prior to Issuance of Grading Permit	Building & Safety / Planning	47) All exposed, disturbed soil (trenches, stored backfill, etc.) shall be sprayed with water or soil binders twice a day, or more frequently if fugitive dust is observed migrating from the project site during future construction activities.	☐

Timing	Responsible Department	Prior to Issuance of Grading Permit	Met?
Prior to Issuance of Grading Permit	Building & Safety / Planning	48) Prior to and during grading and construction, should an accidental release of a hazardous material occur, the following actions will be implemented: a. Construction activities in the immediate area will be immediately stopped; appropriate regulatory agencies will be notified; immediate actions will be implemented to limit the volume and area impacted by the contaminant; the contaminated material, primarily soil, shall be collected and removed to a location where it can be treated or disposed of in accordance with the regulations in place at the time of the event; b. Any transport of hazardous waste from the property shall be carried out by a registered hazardous waste transporter; and testing shall be conducted to verify that any residual concentrations of the accidentally released material are below the regulatory remediation goal at the time of the event. All of the above sampling or remediation activities related to the contamination will be conducted under the oversight of Riverside County Certified Unified Program Agency (CUPA) Site Mitigation Unit (SMU). All of the above actions shall be documented and made available to the appropriate regulatory agencies prior to closure (a determination of the regulatory agency that a site has been remediated to a threshold that poses no hazard to humans) of the contaminated area.	☐
Prior to Issuance of Grading Permit	Engineering	49) The developer/property owner shall have approved grading and improvement plans, executed grading agreement as directed by the City Engineer, and posted securities.	☐

Timing	Responsible Department	Prior to Issuance of Grading Permit	Met?
Prior to Issuance of Grading Permit	Engineering	50) The developer/property owner shall submit the following plans and reports to the City Engineer for review and approval: a. Onsite Grading and Erosion Control Plans – Plans shall show the approved WDID No. b. Geotechnical Report (for reference) c. Storm Drain Improvement Plans d. Hydrology and Hydraulic Analysis e. Final WQMP (for reference) including WDID No. f. Traffic Signal Plan The design shall comply with, RCFCD, and City of San Jacinto, and ADA most recent standards, criteria, and requirement and in effect at the time of construction and shall be coordinated with the approved plans of the adjacent developments.	☐

Timing	Responsible Department	Prior to Issuance of Building Permit (Phase 1)	Met?
Prior to Issuance of Building Permits of Phase 1	Planning	51) The applicant shall demonstrate compliance with SCAQMD rules, Rule 201 – Permit to Construct and Rule 203 – Permit to Operate by obtaining the proper permits from SCAQMD. The applicant/developer shall provide documentation that these permits were obtained.	☐
Prior to Issuance of Building Permits of Phase 1	Planning	52) All plans submitted shall be in substantial conformance to the approved Planned Development Permit and Tentative Tract Map. This condition applies to site plans, grading plans, landscape plans, building plans, elevations, and all other illustrations, text, or plans submitted to the City in connection with the project.	☐
Prior to Issuance of Building Permits of Phase 1	Planning	53) Grading and public improvements shall be installed in accordance with city standards and specifications.	☐
Prior to Issuance of Building Permits of Phase 1	Planning	54) Building permit plans shall be substantially consistent with plans approved through this entitlement, as determined by City Planning.	☐

Timing	Responsible Department	Prior to Issuance of Building Permit (Phase 1)	Met?
Prior to Issuance of Building Permits of Phase 1	Planning	55) A Site Plan & Design Review plan shall be submitted and approved by the City. The design review shall be consistent with the Residential Development Design Regulations (Section 17.425.020) and other relevant sections of the Development Code. At a minimum it should consist of: a. A precise grading plan with the plotting of homes, setbacks from property lines, paved areas, slopes, etc.; b. Floor plans; c. Architectural elevations (in color) of all sides; d. Typical front yard landscaping; e. Entry monumentation, and parkway landscape treatments; f. Wall and Fence Plan that includes a decorative block wall around the perimeter of the project and interior fencing; and g. Common mailbox architectural treatment Elevations of houses facing Esplanade Avenue, Cawston Avenue, and 7th Street shall be enhanced.	☐
Prior to Issuance of Building Permits of Phase 1	Planning	56) **Mitigation Measure HAZ-1.** Asbestos Containing Materials Survey. Prior to the disturbance of any suspect Asbestos Containing Materials (ACMs) during construction or demolition activities at the Proposed Project Site, a comprehensive survey shall be required to sample materials on-site and confirm the presence or absence of ACMs. If such materials are identified and need to be disturbed, repaired, or removed, a licensed abatement contractor shall be consulted further	☐

Timing	Responsible Department	Prior to Issuance of Building Permit (Phase 1)	Met?
Prior to Issuance of Building Permits of Phase 1	Planning	57) **Mitigation Measure HAZ-2.** Methane Testing. Prior to the issuance of building permits, methane testing shall be conducted by a licensed engineer, geologist, or registered environmental assessor, and as necessary, shall include measures to reduce concentrations of methane to an acceptable level.	☐
Prior to Issuance of Building Permits of Phase 1	Planning	58) The developer/applicant or successor in interest shall record a "Water Quality Management Plan and Urban Runoff BMP Transfer Access and Maintenance Agreement," to provide public notice of the requirement to implement the approved Final project-specific WQMP and the maintenance requirements associated with the WQMP. The developer/applicant or successor in interest shall ensure the following, pursuant to Section XII. I. of the 2010 NPDES Permit: Field verification that structural Site Design, Source Control, and Treatment Control BMPs are designed, constructed and functional in accordance with the approved Final Water Quality Management Plan (WQMP). City WQMP Inspector will be notified for required inspections during construction.	☐

Timing	Responsible Department	Prior to Issuance of Building Permit (Phase 1)	Met?
Prior to Issuance of Building Permits of Phase 1	Planning	59) Submit a detailed landscape and irrigation plan for review and approval. The landscape plans shall be prepared by a licensed landscape architect in conformance with Chapter 17.325 – Water Efficient Landscape and Irrigation and Section 17.325.060 – Landscape and Irrigation Submittal Package Requirements of the Development Code and the City Landscape Design Guidelines for review and approval by the City Landscape Architect. Plans should be submitted at least 30 days prior to the expected date of permit issuance. The Landscape and Irrigation Submittal Package shall include: a. A completed application packet provided by the City; b. The Water Efficient Landscape Worksheet, including the MAWA and ETWU; Note the ETo rate for San Jacinto is 56.8 per State guidelines. c. The soils management report; d. The landscape design plan; e. The irrigation design plan; c. The grading plan. d. A completed application packet provided by the City; e. The Water Efficient Landscape Worksheet, including the MAWA	☐

Timing	Responsible Department	Prior to Issuance of Building Permit (Phase 1)	Met?
Prior to Issuance of Building Permits of Phase 1	Planning	60) Submit a Fence and Wall Plan for review that shows the following: a. The developer will work with any adjacent property owners to remove existing walls/fencing (double walls are not permitted). b. The developer will show on the plans how they will connect to the existing wall located to the west. Proposed wall should be similar in color, material, pilaster size, and caps.	☐
Prior to Issuance of Building Permits of Phase 1	Planning	61) **All-Electric Project Design.** The developer/applicant shall design the residential units, common areas, recreation buildings, project amenities, and other permanent on-site facilities to operate on electrical power only, consistent with the assumptions evaluated in the Project's Initial Study/Mitigated Negative Declaration and supporting Air Quality, Greenhouse Gas, and Energy analysis. Compliance shall be demonstrated on applicable utility plans, improvement plans, and building plans to the satisfaction of the City Engineer, Building Official, and Planning Division prior to issuance of applicable permits. *Note: This Condition was added by Staff following the Planning Commission Hearing.*	☐
Prior to Issuance of Building Permits of Phase 1	Building & Safety	62) The contract with demolition and construction contractors shall include the requirement that all materials that can be recycled shall be salvaged and recycled. This includes, but is not limited to, wood, metals, concrete, road base, and asphalt. The developer shall submit a recycling plan to the City for review and approval prior to the start of demolition/construction activities to accomplish this objective.	☐

Timing	Responsible Department	Prior to Issuance of Building Permit (Phase 1)	Met?
Prior to Issuance of Building Permits of Phase 1	Riverside County Fire Department	63) Residential Fire Sprinklers: Residential fire sprinklers are required in all one and two-family dwellings per the California Residential Code (CRC). Plans must be submitted to the Office of the Fire Marshal for review and be approved prior to installation. Reference CFC as amended by Health and Safety Code section 18938.5.	☐
Prior to Issuance of Building Permits of Phase 1	Riverside County Fire Department	64) Phased Construction Access and Water Supply: If construction is phased, an approved phasing plan shall be approved by the Fire Department. Each phase shall provide approved access and water supply for fire protection prior to any construction. Reference CFC as amended by Health and Safety Code section 18938.5.	☐
Prior to Issuance of Building Permits of Phase 1	Riverside County Fire Department	65) Fire and Life Safety Requirements - Final fire and life safety conditions will be addressed when the Fire Department reviews any subsequent submittals. These conditions will be based on California Fire Code (CFC), California Building Code (CBC), and related codes/standards adopted and amended at the time of construction plan submittal or as applicable pursuant to Health and Safety Code section 18938.5.	☐
Prior to Issuance of Building Permits of Phase 1	Riverside County Fire Department	66) Fire Protection Water Supplies/Fire Flow - Minimum fire flow for the construction of all buildings is required per CFC Appendix B. Prior to building permit issuance for new construction, the applicant shall provide documentation to the Fire Department to show there exists a water system capable of delivering the required fire flow. Specific design features may increase or decrease the required fire flow. Reference CFC 507.3 as amended. **Will Serve Letters from the responsible water purveyor are required prior to a map recordation.**	☐

Timing	Responsible Department	Prior to Issuance of Building Permit (Phase 1)	Met?
Prior to Issuance of Building Permits of Phase 1	Riverside County Fire Department	67) Fire Protection Water Supplies/Hydrants – The minimum number of fire hydrants required, as well as the location and spacing of fire hydrants, shall comply with the CFC Appendix C. Fire hydrants shall be located no more than 600 feet from all portions of the exterior of the building along an approved route from a fire apparatus access road. Where new water mains are extended along streets and hydrants are not needed for protection of structures, standard fire hydrants shall be provided as spacing not to exceed 1000 feet along streets for transportation hazards. The size and number of outlets required for the approved fire hydrants are 4" x 2 ½". Final fire hydrant locations shall be determined during the fire water plan review. Reference CFC as amended.	☐
Prior to Issuance of Building Permits of Phase 1	Riverside County Fire Department	68) Tract Water Plans – If fire hydrants are required to be installed, applicant/developer shall furnish the water system fire hydrant plans to Fire Department for review and approval prior to building permit issuance. Plans shall be signed by a registered civil engineer, and shall confirm hydrant type, location, spacing, and minimum fire flow. Once plans are signed and approved by the local water authority, the originals shall be presented to the Fire Department for review and approval. Reference CFC as amended.	☐

Timing	Responsible Department	Prior to Issuance of Building Permit (Phase 1)	Met?
Prior to Issuance of Building Permits of Phase 1	Riverside County Fire Department	69) Fire Department Access - Fire apparatus access roads shall be provided within 300 feet of all exterior portions of buildings, unless otherwise approved by the Fire Department. Fire apparatus access roads shall have an unobstructed width of no less than 24 feet. Dead-end fire apparatus access roads exceeding 150 feet shall provide an approved turn around. The minimum required turning radius of a fire apparatus access road is 38 feet outside radius and 14 feet inside radius. The construction of the fire apparatus access roads shall be all weather and capable of sustaining 75,000 lbs. Unless otherwise approved, the grade of a fire apparatus access road shall not exceed 16 percent and the cross slope shall not exceed 2.5 percent. The angles of approach and departure for fire apparatus access roads shall be a maximum of 6 percent grade change for 25 feet of approach/departure. Reference CFC as amended and Riverside County Fire Department Policies and Standards. Fire Lane marking: Identification and marking of fire lanes, including curb details and signage, shall comply with all Riverside County Fire Department Standards as of the Vesting Date.	☐
Prior to Issuance of Building Permits of Phase 1	Riverside County Fire Department	70) Fire Department Access Turn Around - Dead-end fire apparatus access roads in excess of 150 feet in length shall be provided with a bulb turnaround at the terminus measuring a minimum of 38 feet outside radius and 14 feet inside radius. Parallel parking around the perimeter of the bulb is acceptable provided the bulb outside turning radius is increased by 8 feet. In-lieu of a bulb, a hammer-head type turnaround is acceptable where the top of the “T” dimension is 120 feet with the stem in the center. Additional turnaround designs may be acceptable as approved by the Fire Department. Reference CFC as amended and Riverside County Fire Department Policies and Standards as of the Vesting Date.	☐

Timing	Responsible Department	Prior to Issuance of Building Permit (Phase 1)	Met?
Prior to Issuance of Building Permits of Phase 1	Riverside County Fire Department	71) Secondary Access - Additional fire apparatus access roads based on the potential for impairment by vehicle congestion, condition of terrain, climatic conditions, anticipated magnitude of a potential incident, or other factors that could limit access shall be required by the Fire Department. Secondary access fire apparatus access roads shall provide independent egress/access for the area, as approved by the Fire Department. Secondary access fire apparatus access roads shall be as remote as practical from the primary fire apparatus access road to reduce the possibility that both routes will be obstructed by a single emergency. Additional fire apparatus access roads based on the potential for impairment by vehicle congestion, condition of terrain, climatic conditions, anticipated magnitude of a potential incident, or other factors that could limit access may be required by the Fire Department. Reference CFC as amended and Riverside County Fire Department Policies and Standards as of the Vesting Date.	☐
Prior to Issuance of Building Permits of Phase 1	Riverside County Fire Department	72) Traffic Calming Devices - Requests for installation of traffic calming designs/devices on fire apparatus access roads shall be submitted and approved by the Office of the Fire Marshal. Reference CFC as amended.	☐
Prior to Issuance of Building Permits of Phase 1	Engineering	73) The developer/property owner shall submit to Building and Safety a compaction certification from the Soils Engineer in compliance with the approved geotechnical/soils report and the pad elevation certification from the Civil Engineer in compliance with the approved Precise Grading Plan.	☐

Timing	Responsible Department	Prior to Acceptance of Public Improvements (Phase 1 and 2)	Met?
Prior to Acceptance of Public Improvements	Special Districts	74) Developer will ensure that funds are available for maintenance, in the event that improvements are completed, and ready for City takeover, PRIOR to levy collection. a. The first installment of collected assessments is paid to the City in January of each year. In the event that takeover is requested before the first installment is paid to the City, the Developer will either: i. Pay an advancement of funds for the months included from takeover to collection (amount to be set by cost estimate at annexation) OR ii. Continue to maintain improvements until City has acquired enough funds to sustain maintenance or until first assessment installment is received, whichever is first.	☐
Prior to Acceptance of Public Improvements	Special Districts	75) Upon acceptance and City take-over, developer will ensure that a minimum of one-year warranty is in place for landscape, irrigation, and basin integrity, inclusive pumps and mechanical equipment used for the maintenance of the improvements taken over.	☐
Prior to Acceptance of Public Improvements	Special Districts	76) Parks and associated facilities shall be inspected by a Certified Access Specialist through the Division of the State Architect ensuring compliance with applicable state and federal construction-related accessibility standards. A copy of the disability access inspection certificate and the CASp inspection report shall be provided to the City. Any accessibility barriers documented will need to be remedied prior to acceptance of the park by the City.	☐

Timing	Responsible Department	Prior to the Issuance of a Certificate of Occupancy (Phase1)	Met?
Prior to the Issuance of a Certificate of Occupancy of Phase 1	Planning	77) The developer/applicant or successor in interest shall submit the following items for the landscape and irrigation development and maintenance: The signed Landscape Certificate of Completion pursuant to Section 17.325.070– Certificate of Completion of the Development Code; The irrigation scheduling pursuant to Section 17.325.080 – Irrigation Scheduling of the Development Code; The Landscape and Irrigation Maintenance Schedule pursuant to Section 17.325.090 – Landscape and Irrigation Maintenance Schedule of the Development Code; and The Irrigation Audit, Irrigation Survey, and Irrigation Water Use Analysis pursuant to Section 17.325.100 — Irrigation Audit, Irrigation Survey, and Irrigation Water Use Analysis of the Development Code. Pursuant to Section 17.325.150 – Maintenance of the Development Code, all installed landscaping and irrigation systems shall be continually maintained. Maintenance shall consist of regular watering, mowing, pruning, fertilizing, clearing of debris and weeds, monitoring for pests and disease, the removal and timely replacement of dead plants, and the repair and timely replacement of irrigation systems, and integrated architectural features.	☐
Prior to the Issuance of a Certificate of Occupancy of Phase 1	Planning	78) The subdivider shall pay a fee for neighborhood and community park and recreation purposes according to the standards and formula contained in Title 16 – Subdivision Code, as applicable to each phase contemplated by the final map.	☐

Timing	Responsible Department	Prior to the Issuance of a Certificate of Occupancy (Phase1)	Met?
Prior to the Issuance of a Certificate of Occupancy of Phase 1	Planning	79) The developer shall pay all required Development Impact Fees (DIF) for parkland acquisition, parkland development, and park facilities in effect on the Vesting Date prior to the issuance of a certificate of occupancy or final inspection.at the time of permit issuance for each home. Upon the City's acceptance of the completed parks, the developer will receive a refund of the applicable fees pursuant to Title 16 of the Municipal Code. The amount of the refund shall not exceed the actual cost of the parkland acquisition, parkland development, and park facilities, nor shall it exceed the amount of the fees initially paid. No cross-category credit or refund shall be provided. The developer must provide documentation to the City demonstrating that the refunds do not exceed the actual costs incurred.	☐
Prior to the Issuance of a Certificate of Occupancy of Phase 1	Building & Safety	80) The City has adopted Traffic Signal Mitigation Fees and the Transportation Uniform Mitigation Fee (TUMF) program. This Project shall be subject to payment of these fees prior certificate of occupancy unless exempted by the ordinance establishing the TUMF program. The fees shall be subject to the provisions of the enabling ordinance and based on the Vesting Date (3/31/2025).	☐
Prior to the Issuance of a Certificate of Occupancy of Phase 1	Building & Safety	81) Specific addresses for each building shall be provided to make such number plainly visible from the public street, avenue, court, or alley upon which property fronts, and shall be contrasting color and background.	☐
Prior to the Issuance of a Certificate of Occupancy of Phase 1	Engineering	82) The following items need to be approved: a. Approved WDID No. b. Geotechnical Report (for reference) c. Storm Drain Improvement Plans	☐

Timing	Responsible Department	Prior to the Issuance of a Certificate of Occupancy (Phase1)	Met?
		d. Hydrology and Hydraulic Analysis e. Final WQMP (for reference) including WDID No. The design shall comply with, RCFCD and City of San Jacinto most recent standards, criteria, and requirement and in effect at the time of construction and shall be coordinated with the approved plans of the adjacent developments.	
Prior to the Issuance of a Certificate of Occupancy of Phase 1	Engineering	83) Construct all interior streets within Phase 1. Interior Streets shall be private with a full width of 52 feet to provide for 36 feet asphalt paving (using TI of 5.5 and PG 64-10), curb and gutter at 18 feet on both sides of centerline, an 8-foot parkway consisting of landscaping, a 6-sidewalk, and streetlights subject to photometric analysis per City of San Jacinto, County of Riverside and Caltrans standards. A 24-foot wide access shall be provided for Fire access at all times. Street parking shall be restricted to one side of the street.	☐
Prior to the Issuance of a Certificate of Occupancy of Phase 1	Engineering	84) Construct Street "A" from 7th Street to the southern edge of Street L. Street A shall be private with a full width of 56 feet improved to provide for 36 feet asphalt paving (using TI of 5.5 and PG 64-10) , curb and gutter at 18 feet on both sides of centerline, a 10-foot parkway consisting of landscaping, a 6-sidewalk, and streetlights subject to photometric analysis per City of San Jacinto, County of Riverside and Caltrans standards. A 24-foot wide access shall be provided for Fire at all times. Street parking shall be restricted to one side of the street.	☐

Timing	Responsible Department	Prior to the Issuance of a Certificate of Occupancy (Phase1)	Met?
Prior to the Issuance of a Certificate of Occupancy of Phase 1	Engineering	85) Construct Street "K" from Cawston Avenue to the western edge of Street "A". Street K shall be private with a full width of 80 feet improved to provide for 40 feet asphalt paving (using TI of 5.5 and PG 64-10) , curb and gutter at 20 feet on both sides of centerline, a 20-foot parkway consisting of landscaping, a 6-sidewalk, and streetlights subject to photometric analysis per City of San Jacinto, County of Riverside and Caltrans standards.	☐
Prior to the Issuance of a Certificate of Occupancy of Phase 1	Engineering	86) Seventh Street shall be improved to provide for a 50-foot wide halfwidth right-of-way, asphalt paving (using a TI of 9.0 and PG 70-10), 8-inch curb and gutter 32 feet south of centerline, a Class II: Buffered Bike Lane per the City of San Jacinto Trails Master Plan, and an 18-foot wide parkway consisting of landscaping, a 6-foot sidewalk, and streetlights subject to photometric analysis per City of San Jacinto, County of Riverside, and Caltrans standards. If the existing pavement is in good condition the developer/property owner may use grind and overlay technique as determined by the City Engineer.	☐

Timing	Responsible Department	Prior to the Issuance of a Certificate of Occupancy (Phase1)	Met?
Prior to the Issuance of a Certificate of Occupancy of Phase 1	Engineering	87) Cawston Avenue shall be improved to provide for a 50-foot wide halfwidth right-of-way, asphalt paving (using a TI of 9.0 and PG 70-10), 8-inch curb and gutter 32 feet west of centerline, a Class II: Buffered Bike Lane per the City of San Jacinto Trails Master Plan, and an 18-foot wide parkway consisting of landscaping, a 6-foot sidewalk, and streetlights subject to photometric analysis per City of San Jacinto, County of Riverside, and Caltrans standards. If the existing pavement is in good condition the developer/property owner may use grind and overlay technique as determined by the City Engineer.	☐
Prior to the Issuance of a Certificate of Occupancy of Phase 1	Engineering	88) A traffic signal shall be installed at the intersection of Cawston Avenue and Seventh Street. The intersection shall be improved to accommodate the required vehicular travel lanes and pedestrian crossings as recommended by the project's traffic engineer and as directed by the City Engineer. *Note: This Condition was added by Staff following the Planning Commission Hearing.*	☐
Prior to the Issuance of a Certificate of Occupancy of Phase 1	Engineering	89) This Property is located in the San Jacinto Valley Area Drainage Plan which was adopted by the City of San Jacinto pursuant to Ordinance 13-01 and Section 66001, et seq, of the Government Code and that said property is subject to fees for said drainage area. Notice is further given that, pursuant to Ordinance 13-01, payment of the drainage fees applicable to each phase shall be paid to the City of San Jacinto prior to certificate of occupancy of the 1st building permit for the phase, and that the property owner shall pay the fee required at the rate in effect at the upon the issuance of a certificate of occupancy or final inspection	☐

Timing	Responsible Department	Prior to the Issuance of a Certificate of Occupancy (Phase1)	Met?
Prior to the Issuance of a Certificate of Occupancy of Phase 1	Engineering	90) All residential driveways shall be constructed per County of Riverside Standard No. 207.	☐
Prior to the Issuance of a Certificate of Occupancy of Phase 1	Engineering	91) All sidewalks shall comply with Riverside County Standard 401.	☐
Prior to the Issuance of a Certificate of Occupancy of Phase 1	Engineering	92) Curb ramps shall include truncated domes per Riverside County Standard 403.	☐
Prior to the Issuance of a Certificate of Occupancy of Phase 1	Engineering	93) The detention basin on Lot "A" is proposed to be maintained by the City. The basin shall be constructed per City of San Jacinto and Riverside County Flood Control and Water Conservation District (RCFCD) standards and design guidelines. To dewater the basin, a sump pump and force main is required. The developer purposes to pump nuisance flows to a bubble-up structure in the Seventh Street right-of-way just west of Anza Trail. From there, the storm water would flow through the gutter to a catch basin at Serrano Street where it would be collected and discharged into a detention basin constructed with the Esplanade Specific Plan. The entire system, including the Esplanade Specific Plan basin, must be accepted by the City for maintenance prior to the issuance of the 1st occupancy permit for this development.	☐

Timing	Responsible Department	Prior to the Issuance of a Certificate of Occupancy (Phase1)	Met?
Prior to the Issuance of a Certificate of Occupancy of Phase 1	Engineering	94) The developer shall provide water and sewer services to each lot in accordance with the requirements of the appropriate utility purveyor. This development is within the City of San Jacinto sewer service area, and the EMWD water service area. Water and sewer improvements shall be designed and installed per EMWD Standards.	☐
Prior to the Issuance of a Certificate of Occupancy of Phase 1	Engineering	95) Existing power poles with cables 66kV and under along the alley shall be removed and cables undergrounded. Poles with cables over 66kV shall be relocated as necessary, but other utilities on the pole must be undergrounded. Provide an undergrounding of utilities study by a utility consultant/electrical engineer analyzing and determining the extent of conformance.	☐
Prior to the Issuance of a Certificate of Occupancy of Phase 1	Engineering	96) The developer/property owner shall provide for utility trench surface repair as directed by the City Engineer if applicable.	☐
Prior to the Issuance of a Certificate of Occupancy of Phase 1	Special Districts	97) Development must comply with Storm Water Basin & Pump Specifications and Standards. Privately maintained storm water and water quality systems will be required to submit an Irrevocable Offer of Dedication for the basin lot.	☐
Prior to the Issuance of a Certificate of Occupancy of Phase 1	Special Districts	98) Development must comply with Landscape and Irrigation Design Guidelines.	☐

Timing	Responsible Department	Prior to the Issuance of a Certificate of Occupancy (Phase1)	Met?
Prior to the Issuance of a Certificate of Occupancy of Phase 1	Special Districts	99) Landscape improvements shall include irrigation meters and backflow devices with tampering preventive cage, exclusive for right-of-way landscaping. Right-of-way landscaping must be divided from private property by form or mow-curb or other approved materials.	☐
Prior to the Issuance of a Certificate of Occupancy of Phase 1	Special Districts	100) Landscape areas in the right-of-way shall include an independent irrigation control system, with separate electric meter, exclusive for right-of-way landscaping. Cal-Sense version approved by the Public Utilities Superintendent is required for City maintained irrigation areas. (Must be operational and certified by Cal-Sense).	☐

Timing	Responsible Department	Prior to Issuance of Building Permits (Phase 2)	Met?
Prior to Issuance of Building Permits of Phase 2	Planning	101) All Phase 1 Conditions of Approval Prior to Occupancy Conditions are required to be completed.	☐
Prior to Issuance of Building Permits of Phase 2	Planning	102) All required infrastructure including, streets, basins and landscape setbacks, shall be complete to the satisfaction of the Planning Division and the City Engineer.	☐
Prior to Issuance of Building Permits of Phase 2	Planning	103) The applicant shall submit a revised plot plan that clearly illustrates all required setbacks measured from the property lines. a. The minimum setback from the property line to the garage shall be no less than twenty (20) feet. b. The applicant shall identify rear elevations that face the public right-of-way and show how they will be architecturally enhanced.	☐
Prior to Issuance of Building Permits of Phase 2	Planning	104) A Site Plan & Design Review plan shall be submitted and approved by the City. The design review shall be consistent with the Residential Development Design Regulations (Section 17.425.020) and other relevant sections of the Development Code. At a minimum it should consist of: a. A precise grading plan with the plotting of homes, setbacks from property lines, paved areas, slopes, etc.; b. Floor plans;	☐

Timing	Responsible Department	Prior to Issuance of Building Permits (Phase 2)	Met?
		c. Architectural elevations (in color) of all sides; d. Typical front yard landscaping; e. Entry monumentation, and parkway landscape treatments; f. Wall and Fence Plan that includes a decorative block wall around the perimeter of the project and interior fencing; and g. Common mailbox architectural treatment h. Elevations of houses facing Esplanade Avenue, Cawston Avenue, and 7th Street shall be enhanced.	
Prior to Issuance of Building Permits of Phase 2	Planning	105) Submit a detailed landscape and irrigation plan for review and approval. The landscape plans shall be prepared by a licensed landscape architect in conformance with Chapter 17.325 – Water Efficient Landscape and Irrigation and Section 17.325.060 – Landscape and Irrigation Submittal Package Requirements of the Development Code and the City Landscape Design Guidelines for review and approval by the City Landscape Architect. Plans should be submitted at least 30 days prior to the expected date of permit issuance. The Landscape and Irrigation Submittal Package shall include: a. A completed application packet provided by the City; b. The Water Efficient Landscape Worksheet, including the MAWA and ETWU; Note the ETo rate for San Jacinto is 56.8 per State guidelines. c. The soils management report; d. The landscape design plan; e. The irrigation design plan;	☐

Timing	Responsible Department	Prior to Issuance of Building Permits (Phase 2)	Met?
		f. The grading plan.	
Prior to Issuance of Building Permits of Phase 2	Planning	106) Submit a Fence and Wall Plan for review that shows the following: a. The developer will work with any adjacent property owners to remove existing walls/fencing (double walls are not permitted). b. The developer will show on the plans how they will connect to the existing wall located to the west. Proposed wall should be similar in color, material, pilaster size, and caps.	☐

Timing	Responsible Department	Prior to the Issuance of a Certificate of Occupancy (Phase 2)	Met?
Prior to the Issuance of a Certificate of Occupancy of Phase 2	Planning	107) The developer/applicant or successor in interest shall submit the following items for the landscape and irrigation development and maintenance: • The signed Landscape Certificate of Completion pursuant to Section 17.325.070– Certificate of Completion of the Development Code; • The irrigation scheduling pursuant to Section 17.325.080 – Irrigation Scheduling of the Development Code; • The Landscape and Irrigation Maintenance Schedule pursuant to Section 17.325.090 – Landscape and Irrigation Maintenance Schedule of the Development Code; and • The Irrigation Audit, Irrigation Survey, and Irrigation Water Use Analysis pursuant to Section 17.325.100 — Irrigation Audit, Irrigation Survey, and Irrigation Water Use Analysis of the Development Code. Pursuant to Section 17.325.150 – Maintenance of the Development Code, all installed landscaping and irrigation systems shall be continually maintained. Maintenance shall consist of regular watering, mowing, pruning, fertilizing, clearing of debris and weeds, monitoring for pests and disease, the removal and timely replacement of dead plants, and the repair and timely replacement of irrigation systems, and integrated architectural features.	☐

Timing	Responsible Department	Prior to the Issuance of a Certificate of Occupancy (Phase 2)	Met?
Prior to the Issuance of a Certificate of Occupancy of Phase 2	Planning	108) The developer shall pay all required Development Impact Fees (DIF) for parkland acquisition, parkland development, and park facilities in effect on the Vesting Date prior to the issuance of a certificate of occupancy or final inspection.at the time of permit issuance for each home. Upon the City's acceptance of the completed parks, the developer will receive a refund of the applicable fees pursuant to Title 16 of the Municipal Code. The amount of the refund shall not exceed the actual cost of the parkland acquisition, parkland development, and park facilities, nor shall it exceed the amount of the fees initially paid. No cross-category credit or refund shall be provided. The developer must provide documentation to the City demonstrating that the refunds do not exceed the actual costs incurred.	☐
Prior to the Issuance of a Certificate of Occupancy of Phase 2	Building & Safety	109) The City has adopted Traffic Signal Mitigation Fees and the Transportation Uniform Mitigation Fee (TUMF) program. This Project shall be subject to payment of these fees prior certificate of occupancy unless exempted by the ordinance establishing the TUMF program. The fees shall be subject to the provisions of the enabling ordinance and based upon the fee schedule in effect on the Vesting Date (3/31/2025).	☐
Prior to the Issuance of a Certificate of Occupancy of Phase 2	Building & Safety	110) Specific addresses for each building shall be provided to make such number plainly visible from the public street, avenue, court, or alley upon which property fronts, and shall be contrasting color and background.	☐

Timing	Responsible Department	Prior to the Issuance of a Certificate of Occupancy (Phase 2)	Met?
Prior to the Issuance of a Certificate of Occupancy of Phase 2	Engineering	111) Construct all interior streets within Phase 2. Interior Streets shall be private with a full width of 52 feet to provide for 36 feet asphalt paving (using TI of 5.5 and PG 64-10), curb and gutter at 18 feet on both sides of centerline, an 8-foot parkway consisting of landscaping, a 6-sidewalk, and streetlights subject to photometric analysis per City of San Jacinto, County of Riverside and Caltrans standards. A 24-foot wide access shall be provided for Fire access at all times. Street parking shall be restricted to one side of the street.	☐
Prior to the Issuance of a Certificate of Occupancy of Phase 2	Engineering	112) Esplanade shall be improved to provide for a 73-foot wide halfwidth right-of-way, asphalt paving (using a TI of 9.5 and PG 70-10), 8-inch curb and gutter 38 feet north of centerline, a Class I: Multi-Use Path per the City of San Jacinto Trails Master Plan, and an 35-foot wide parkway consisting of landscaping, and streetlights subject to photometric analysis per City of San Jacinto, County of Riverside, and Caltrans standards. As part of the CIP program, the City is planning to widen Esplanade Avenue from Warren Road to Sanderson Avenue in 2026 and will include traffic signals at the intersections of Cawston Avenue and Sanderson Avenue, with two more lanes and a sidewalk. Streetlights will not be constructed as part of these improvements. The developer shall coordinate with the City on the installation of improvements. If the existing pavement is in good condition the developer/property owner may use grind and overlay technique as determined by the City Engineer.	☐

Timing	Responsible Department	Prior to the Issuance of a Certificate of Occupancy (Phase 2)	Met?
Prior to the Issuance of a Certificate of Occupancy of Phase 2	Engineering	113) The developer shall provide water and sewer services to each lot in accordance with the requirements of the appropriate utility purveyor. This development is within the City of San Jacinto sewer service area, and the EMWD water service area. Water and sewer improvements shall be designed and installed per EMWD Standards.	☐
Prior to the Issuance of a Certificate of Occupancy of Phase 2	Engineering	114) Existing power poles with cables 66kV and under along the alley shall be removed and cables undergrounded. Poles with cables over 66kV shall be relocated as necessary, but other utilities on the pole must be undergrounded. Provide an undergrounding of utilities study by a utility consultant/electrical engineer analyzing and determining the extent of conformance.	☐
Prior to the Issuance of a Certificate of Occupancy of Phase 2	Engineering	115) The developer/property owner shall provide for utility trench surface repair as directed by the City Engineer if applicable.	☐
Prior to the Issuance of a Certificate of Occupancy of Phase 2	Engineering	116) A traffic signal shall be installed at the intersection of Cawston Avenue and Cottonwood Avenue. The intersection shall be improved to accommodate the required vehicular travel lanes and pedestrian crossings as recommended by the project's traffic engineer and as directed by the City Engineer.	☐

Timing	Responsible Department	Prior to the Issuance of a Certificate of Occupancy (Phase 2)	Met?
Prior to the Issuance of a Certificate of Occupancy of Phase 2	Engineering	117) The following items need to be approved: a. approved WDID No. b. Geotechnical Report (for reference) c. Storm Drain Improvement Plans d. Hydrology and Hydraulic Analysis e. Final WQMP (for reference) including WDID No. The design shall comply with, RCFCD and City of San Jacinto most recent standards, criteria, and requirement and in effect at the time of construction and shall be coordinated with the approved plans of the adjacent developments.	☐

Timing	Responsible Department	Operational	Met?
Operational	Planning	118) The Project is required to comply with San Jacinto Development Code Section 17.300.080 which requires all exterior lighting to be shielded or modified and located so as to eliminate spillover illumination or glare beyond the property line or upward into the sky.	☐
Operational	Planning	119) All landscaped areas shall be maintained in a thriving condition free of weeds, trash, and debris.	☐
Ongoing	Planning	120) The erection (including excavation), demolition, alteration or repair of any building shall occur between the hours of seven a.m. and seven p.m. on weekdays and Saturdays, and between nine a.m. and six p.m. on Sundays and holidays, except when such work complies with the terms of a temporary use permit which may be issued by the community development director or his or her designee, upon a showing of sufficient need due to hot or inclement weather, or the use of an unusually long process material, or other circumstances of unusual and compelling nature. All construction equipment shall be muffled and/or surrounded by noise attenuating barriers.	☐

Timing	Responsible Department	Operational	Met?
Ongoing	Planning	121) Mitigation Measure BIO-4. MSHCP Construction Minimization Measures. The Project Applicant and their designee (i.e., Construction Contractors) shall follow required MSHCP Construction Minimization Measures (Section 7.5.3 of the MSHCP). Applicable construction minimization measures are listed below. Plans for water pollution and erosion control will be prepared for all Discretionary Projects involving the movement of earth in excess of 50 cubic yards. The plans will describe sediment and hazardous materials control, dewatering or diversion structures, fueling and equipment management practices, use of plant material for erosion control. Plans will be reviewed and approved by the City prior to construction. Timing of construction activities will consider seasonal requirements for breeding birds and migratory non-resident species. Habitat clearing will be avoided during species active breeding season defined as March 1 to June 30. Sediment and erosion control measures will be implemented until such time soils are determined to be successfully stabilized.	☐

STATE OF CALIFORNIA)
COUNTY OF RIVERSIDE)
CITY OF SAN JACINTO)

PC RESOLUTION NO. 26-01

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF SAN JACINTO RECOMMENDING THAT THE CITY COUNCIL ADOPT A MITIGATED NEGATIVE DECLARATION AND MITIGATION MONITORING AND REPORTING PROGRAM, AND APPROVE A GENERAL PLAN AMENDMENT, CHANGE OF ZONE, PLANNED DEVELOPMENT PERMIT, AND TENTATIVE TRACT MAP 39076 (PROJ23-0029)

WHEREAS, the applicant, Chacon Farms, submitted applications for a General Plan Amendment, Change of Zone, Planned Development Permit, and Tentative Tract Map 39076 to subdivide approximately 73.97 net acres into 419 single-family residential lots, along with lettered lots for internal roadways, a detention basin, parks, and landscape areas, located between 7th Street to the north, Esplanade Avenue to the south, and west of Cawston Avenue (Project); and

WHEREAS, the City, as Lead Agency, prepared an Initial Study in accordance with the California Environmental Quality Act (CEQA) and determined that, with the incorporation of mitigation measures, the Project will not have a significant effect on the environment, and a Mitigated Negative Declaration (MND) and Mitigation Monitoring and Reporting Program (MMRP) were prepared for the Project; and

WHEREAS, the Planning Commission has reviewed and considered the Initial Study, Mitigated Negative Declaration, and Mitigation Monitoring and Reporting Program, together with all comments received thereon, and finds that the MND reflects the independent judgment of the City; and

WHEREAS, on March 24, 2026, the Planning Commission conducted a duly noticed public hearing on the Project, at which time all interested persons were given the opportunity to be heard and the Project was fully considered; and

WHEREAS, the Planning Commission has considered the entire record of proceedings, including the staff report, technical studies, public testimony, and all other evidence presented.

NOW, THEREFORE, BE IT RESOLVED BY THE PLANNING COMMISSION OF THE CITY OF SAN JACINTO:

Section 1. Recitals. The foregoing recitals are true and correct and are incorporated herein by reference.

COPY

Section 2. Environmental Determination. Based upon the whole of the record before it, including the Initial Study and all supporting information, the Planning Commission finds that:

A. The Mitigated Negative Declaration has been prepared in compliance with the California Environmental Quality Act (CEQA);

B. The Mitigated Negative Declaration reflects the independent judgment of the City;

C. There is no substantial evidence, in light of the whole record, that the Project, as mitigated, will have a significant effect on the environment; and

D. The mitigation measures identified in the Mitigated Negative Declaration are hereby adopted and shall be implemented through the Mitigation Monitoring and Reporting Program.

Section 3. Findings. Based upon the entire record, including all written and oral evidence presented, and the findings set forth in the staff report and incorporated herein by reference, the Planning Commission finds that:

A. The Project is consistent with the General Plan and all applicable provisions of the Municipal Code;

B. The Tentative Tract Map is consistent with the Subdivision Map Act and the City's Development Code, and the site is physically suitable for the type and density of development proposed;

C. The Project satisfies all applicable findings required for approval of the General Plan Amendment, Change of Zone, Planned Development Permit, and Tentative Tract Map; and

D. The Project will not be detrimental to the public interest, health, safety, convenience, or welfare of the City.

Section 4. Recommendation of Approval. Based upon the foregoing, the Planning Commission hereby recommends that the City Council:

A. Adopt the Mitigated Negative Declaration for the Project and adopt and implement the Mitigation Monitoring and Reporting Program;

B. Approve a General Plan Amendment to change the land use designation from Very Low Density Residential (VLDR) to Low Density Residential (LDR);

C. Approve a Change of Zone from Rural Residential (RR) to Residential Low Density (RL);

D. Approve a Planned Development Permit to allow modifications to the Residential Low Density (RL) development standards, subject to the Conditions of Approval attached hereto as Exhibit A and incorporated herein by reference;

COPY

E. Approve Tentative Tract Map No. 39076 to subdivide approximately 73.97 net acres into 419 single-family residential lots and associated lettered lots for roadways, drainage, parks, and landscape areas, subject to the Conditions of Approval attached hereto as Exhibit A and incorporated herein by reference; and,

F. Direct staff to file a Notice of Determination in accordance with the California Environmental Quality Act.

Section 5. Record of proceedings. The documents and materials that constitute the record of proceedings upon which this Resolution is based are located at the City of San Jacinto, 595 South San Jacinto Avenue, San Jacinto, California 92583. The custodian of the record is the Community Development Department. This information is provided pursuant to Public Resources Code Section 21081.6.

Section 6. Recommendation to city council. As the Project includes a General Plan Amendment, Change of Zone, and Planned Development Permit, final action on the Project rests with the City Council. The Planning Commission's action on this item constitutes a recommendation to the City Council.

PASSED, APPROVED, AND ADOPTED at a regular meeting of the Planning Commission on the 24th day of March 2026 by the following vote:

AYES:	Awad, Gagnepain, Jones, Peterson, Scott
NAYS:	None
ABSENT:	None
ABSTAIN:	None

Tentative Tract Map No. 39076

FINAL INITIAL STUDY / MITIGATED NEGATIVE DECLARATION

Case No. PROJ23-0029

City of San Jacinto Planning and Building Division
595 South San Jacinto Avenue San Jacinto, California 92583

Prepared By :

11801 Pierce Street, Suite 200
Riverside, CA 92505

January 7, 2026

1.0 CEQA Requirements Regarding Comments and Responses

Section 15088 of the California Environmental Quality Act (CEQA) Guidelines requires the Lead Agency—in this case, the City of San Jacinto—to evaluate and respond in good faith to all substantive comments concerning environmental issues that are submitted by public agencies or interested parties during the public review period for an Environmental Impact Report. The intent of this requirement is to ensure that the environmental record reflects meaningful consideration of public and agency input and that decision-makers are fully informed of environmental issues raised by reviewers before acting on the project.

While CEQA does not require a written response to comments on a Mitigated Negative Declaration, the City of San Jacinto has elected to prepare responses received on the Draft Initial Study/Mitigated Negative Declaration (Draft IS/MND) as a matter of good public policy and transparency. Accordingly, this **Final IS/MND** includes written responses to comments received during the public circulation period.

1.1 Public Review Process

Consistent with Sections 15072 and 15073 of the CEQA Guidelines, a Notice of Intent to Adopt a Mitigated Negative Declaration for the Chacon Farms Project (Tentative Tract Map No. 39076; Case No. PROJ23-0029) was circulated for public review and comment for a 30-day period beginning October 28, 2025, and ending November 27, 2025. The Notice was filed with Riverside County Clerk, published in a newspaper of general circulation, and distributed to interested agencies, organizations, and individuals in accordance with CEQA requirements. During this period, the Draft IS/MND and supporting technical studies were made available for review at San Jacinto City Hall (595 South San Jacinto Avenue, San Jacinto, California) and on the City's Planning Division webpage at:

https://www.sanjacintoca.gov/city_departments/community-development/planning/c_e_q_a

Written comments received during the public review period are included in Section 2.0 of this Final IS/MND, followed by the City's responses. The City of San Jacinto will consider this Final IS/MND—including all written comments and responses—prior to deciding whether to adopt the Mitigated Negative Declaration and approve the Chacon Farms Project.

1.2 Supplemental Technical Studies

In response to comments received during the public review period, supplemental technical studies have been prepared and are included as appendices to this Final IS/MND. These studies provide additional documentation substantiating the environmental analysis and conclusions of the Draft IS/MND. No revisions to the text of the Draft IS/MND were required. The supplemental studies include:

- Phase II Environmental Site Assessment (Stantec, December 2025)
- LESA Model Analysis

These additions constitute clarifying information that does not alter the environmental conclusions of the Draft IS/MND.

CEQA Guidelines § 15073.5 provides the circumstances when a lead agency must recirculate a negative declaration and changes that do not require recirculation. Recirculation is required when the negative declaration must be substantially revised after being circulated for public comment. A "substantial revision" means: "(1) A new, avoidable significant effect is identified and mitigation measures or project revisions must be added in order to reduce the effect to insignificance, or (2) The lead agency determines that the proposed mitigation measures or project revisions will not reduce potential effects to less than significance and new measures or revisions must be required." Recirculation is not required for any of the following revisions:

1. Mitigation measures are replaced with equal or more effective measures pursuant to Section 15074.1.

2. New project revisions are added in response to written or verbal comments on the project's effects identified in the proposed negative declaration which are not new avoidable significant effects.

3. Measures or conditions of project approval are added after circulation of the negative declaration which are not required by CEQA, which do not create new significant environmental effects and are not necessary to mitigate an avoidable significant effect.

4. New information is added to the negative declaration which merely clarifies, amplifies, or makes insignificant modifications to the negative declaration.

5. None of the revisions result in new significant environmental impacts or a substantial increase in the severity of previously identified impacts. These additions constitute clarifying information pursuant to CEQA Guidelines § 15073.5(c)(4) and do not alter the environmental conclusions of the Draft IS/MND. Therefore, the conclusions of the Draft IS/MND remain valid, and recirculation under CEQA Guidelines §15073.5 is not required.

2.0 Comment Letters and Responses

This section presents all written comments received during the public review period for the Draft Initial Study/Mitigated Negative Declaration (Draft IS/MND) for the Chacon Farms Project, along with the City of San Jacinto's written responses. Each comment letter has been assigned a unique identifier (e.g., Letter A, Letter B), and individual comments within each letter are numbered sequentially for reference (e.g., Comment A-1, A-2). Corresponding responses immediately follow each comment.

The following comment letters were received by the City of San Jacinto.

- **Comment Letter A:** California Department of Toxic Substances Control, October 29, 2025
- **Comment Letter B**: California Department of Conservation, November 18, 2025
- **Comment Letter C**: Talley Meadows Ranch, November 18, 2025
- **Comment Letter D**: Supporters Alliance for Environmental Responsibility (SAFER), March 24, 2026
- **Comment Letter E**: Joe and Christy Talley, April 7, 2026
- **Comment Letter F**: Michael and Emalee Tomoni, April 7, 2026

RE: MITIGATED NEGATIVE DECLARATION FOR THE CHACON FARMS PROJECT DATED OCTOBER 24, 2025, STATE CLEARINGHOUSE NUMBER 2025101241

Dear Yaneli Hernandez,

The Department of Toxic Substances Control (DTSC) reviewed the Mitigated Negative Declaration (MND) for the Chacon Farms Project (Project). The Project proposes to subdivide three parcels via a Tentative Tract Map into 419 lots that will result in the development of 419 single-family detached residences, onsite roadways, open spaces and detention basin on 73.97 acres. The residential lots would be a minimum of 4,500 square feet. DTSC recommends and requests consideration of the following comments: **A-1**

1. When agricultural crops and/or land uses are proposed or rezoned for residential use, several contaminants of concern (COCs) can be present. The Lead Agency shall identify the amounts of Pesticides and Organochlorine Pesticides (OCPs) historically used on the property. If present, OCPs requiring further analysis are dichloro-diphenyl-trichloroethane, toxaphene, and dieldrin. Additionally, any level of arsenic present would require further analysis and sampling and must meet approved local area baselines or thresholds. If they do not, remedial action must take place to mitigate them below those thresholds.

Additional COCs may be found in mixing/loading/storage areas, drainage ditches, farmhouses, or any other outbuildings and should be sampled and analyzed. If smudge pots had been routinely utilized, additional sampling for Polycyclic Aromatic Hydrocarbons and/or Total Petroleum Hydrocarbons may be required. These recommendations should be adhered to and become part of the environmental document. Please refer to the DTSC's Human and Ecological Risk Office (HERO) webpage for the most recent guidance and screening levels.

A-1 Cont.

2. DTSC recommends all imported soil/fill material be tested to ensure all COCs meet screening levels as outlined in DTSC's Preliminary Endangerment Assessment Guidance Manual. Furthermore, DTSC advises referencing the DTSC Information Advisory Clean Imported Fill Material Fact Sheet if importing soil/fill is necessary. To minimize the possibility of introducing contaminated soil/fill material, there should be documentation of the origins of the soil/fill material and, if applicable, sampling be conducted to ensure that the imported soil/fill material are suitable for the intended land use. The soil sampling should include analysis based on the source of the soil/fill and knowledge of prior land use.

A-2

3. The City of San Jacinto should consider soil testing as mentioned in comment #1. If, in the event any COC results are above DTSC residential screening levels, DTSC recommends the City of San Jacinto address the contaminations within the Project area through an Environmental Site Assessment and/or receive oversight from a self-certified local agency, DTSC or Regional Water Quality Control Board. If entering into one of DTSC's voluntary agreements, please note that DTSC uses a single standard Request for Lead Agency Oversight Application for all agreement types. Please apply for DTSC oversight using this link: Request for Agency Oversight Application. Submittal of the online application includes an agreement to pay costs incurred during agreement preparation. If you have any questions about the application portal, please contact the relevant Regional Brownfield Coordinator for your Project.

A-3

DTSC would like to thank you for the opportunity to comment on the MND for the Chacon Farms Project. Thank you for your assistance in protecting California's people and environment from the harmful effects of toxic substances. If you have any questions or would like clarification on DTSC's comments, please respond to this letter or via our CEQA Review email for additional guidance. A-4

Sincerely,

Dave Kereazis

Dave.Kereazis@dtsc.ca.gov

Responses To Letter A
Department of Toxic Substances Control (DTSC)

Comment A-1

DTSC notes that when agricultural land is proposed for residential use, contaminants such as organochlorine pesticides and arsenic may be present. DTSC recommends that the Lead Agency identify potential historical pesticide use and conduct sampling to determine if remediation is necessary.

Response:

The Project site is zoned Rural Residential (RR), and a zone change to Low Density Residential (LDR is proposed, so it has long been zoned for residential uses. Despite the zoning, the City acknowledges the site's long-term agricultural use and DTSC's recommendations regarding potential contaminants of concern (COCs). A Phase I Environmental Site Assessment (ESA) prepared by Partner Engineering (September 2024) documented historical crop cultivation and possible use of fertilizers and pesticides but did not identify recognized environmental conditions (RECs) requiring immediate subsurface investigation.

Although not required by the Phase I ESA, Stantec completed a Phase II ESA in November 2025, advancing 18 soil borings in a grid pattern (one per four acres) to a depth of 3 feet. Shallow samples collected at 0.5 feet were analyzed for OCPs and arsenic; all results were non-detect above laboratory reporting limits. While the arsenic reporting limit of 5.0 mg/kg exceeds the residential screening level of 0.68 mg/kg, arsenic occurs naturally in California soils at concentrations up to 12 mg/kg, and DTSC's HERO Note 11 recognizes background levels as the appropriate cleanup standard.

Additionally, four borings in the area of historical livestock activity were extended to 15 feet and converted to dual-nested soil vapor probes for methane monitoring. Field readings collected in December 2025 detected methane at 310–500 ppmV, well below both the City of San Jacinto's 12,500 ppmV standard and the County Fire Authority's 5,000 ppmV threshold. Based on these results, neither the property's agricultural history nor its former livestock use constitutes a recognized environmental condition under ASTM E1527-21, and no further investigation is recommended. The Phase II ESA is attached as Appendix A.

Although the site remains under active agricultural cultivation, only organic fertilizer (manure) is used to ensure that the sampling that has been performed continues to accurately represent soil conditions at the cessation of farming. Based on the Phase I ESA, Phase II ESA, and the owner's commitment to use only organic fertilizer, no additional sampling is required.

Comment A-2.

DTSC recommends all imported soil/fill be tested to ensure it meets applicable screening levels.

Response: DTSC has not identified a new significant impact related to the project. The project applicant would obtain fill from sources that would prevent it from violating laws that would impose liability for contamination, such as the Porter-Cologne Water Quality Control Act, which regulates stormwater runoff.

Under the California Building Code (Title 24, Chapter 17, § 1705.6.1), fill used to support foundations must be continuously inspected by a geotechnical engineer. The duties of the geotechnical engineer include the approval of soils to be used as fill material and the testing of the completed fills. One item the geotechnical engineer confirms is that the purchased soil has documentation from the seller that the soil is "clean" and suitable for residential purposes.

In addition, the project is required to comply with Zoning Code section 17.325.060, which requires preparation of a soil management plan for landscape purposes, that includes submission to the City of San Jacinto. The City of San Jacinto requires as part of the soil management plan that an applicant submit soil samples to a qualified laboratory for analysis, encompassing soil texture, infiltration rate, pH, total soluble salts, sodium, and percent organic matter, along with mitigation recommendations. For phased or multi-lot development projects, a sampling rate of approximately 15% (one per seven lots) shall be deemed sufficient. The completed soil analysis report shall be incorporated into the Landscape and Irrigation Submittal Package or, where significant mass grading is proposed, submitted concurrent with the certificate of completion. Laboratory findings and recommendations shall be made available to qualified landscape and irrigation design professionals in a timely manner to inform any necessary plan modifications. Prior to project closeout, the applicant shall provide the City with written verification that all soil analysis recommendations have been implemented as a condition of project approval.

Comment A-3

The City of San Jacinto should consider soil testing as mentioned in comment#1. If, in the event any COC results are above DTSC residential screening levels, DTSC recommends the City of San Jacinto address the contamination within the Project area through an Environmental Site Assessment and/or receive oversight from a self-certified local agency, DTSC or Regional Water Quality Control Board.

Response:

Comment A-3 reiterates DTSC's recommendation in Comment A-2 regarding investigation of soils potentially impacted by former agricultural uses. See Response A-1 and Response A-2.

Comment A-4

DTSC would like to thank you for the opportunity to comment on the MND for the Chacon Farms Project. Thank you for your assistance in protecting California's people and environment from the harmful effects of toxic substances. If you have any questions or would like clarification on DTSC's comments, please respond to this letter or via our CEQA Review email for additional guidance.

Response

The City of San Jacinto appreciates the Department of Toxic Substances Control's (DTSC) review and comments on the Mitigated Negative Declaration for the Chacon Farms Project. The City acknowledges DTSC's continued efforts to protect public health and the environment.

DTSC's closing remarks are noted and will be included in the administrative record. No further revisions to the ISMND are warranted because no new or substantially more severe significant impacts have been identified.

California
Department of Conservation
Division of Land Resource Protection

Gavin Newsom, Governor
Jennifer Lucchesi, Director

NOVEMBER 18TH, 2025

VIA EMAIL: YHERNANDEZ@SANJACINTOCA.GOV **LETTER B**

YANELI HERNANDEZ, SENIOR PLANNER
CITY OF SAN JACINTO
595 S. SAN JACINTO AVENUE
SAN JACINTO, CA 92583

Dear Yaneli Hernandez:

INITIAL STUDY AND MITIGATED NEGATIVE DECLARATION FOR THE CHACON FARMS PROJECT, SCH# 2025101241

The Department of Conservation's (Department) Division of Land Resource Protection (Division) has reviewed the Initial Study and Mitigated Negative Declaration for the Chacon Farms Project (Project).

The Division monitors and maps farmland conversion on a statewide basis, provides technical assistance regarding the Williamson Act, and administers various agricultural land conservation programs. Public Resources Code, section 614, subdivision (b) authorizes the Department to provide soil conservation advisory services to local governments, including review of CEQA documents. **B-1**

Protection of the state's agricultural land resources is part of the Department's mission and central to many of its programs. The CEQA process gives the Department an opportunity to acknowledge the value of the resource, identify areas of Department interest, and offer information on how to assess potential impacts or mitigation opportunities.

The Department respects local decision-making by informing the CEQA process and is not taking a position or providing legal or policy interpretation.

We offer the following comments for consideration with respect to the project's potential impacts on agricultural land and resources within the Department's purview.

PROJECT ATTRIBUTES

The Project proposes to subdivide three parcels via a Tentative Tract Map into 419 lots that will result in the development of 419 single-family detached residences, onsite roadways, open spaces and detention basin on 73.97 acres. The residential lots would be a minimum of 4,500 square feet. Residential structures would be 1 or 2 stories in height. The Project site contains Prime Farmland and Farmland of Statewide Importance as designated by DOC's Farmland Mapping and Monitoring Program. **B-2**

State of California Natural Resources Agency | Department of Conservation
715 P Street, MS 1904, Sacramento, CA 95814
conservation.ca.gov | T: (916) 324-0850

PROJECT CONSIDERATIONS

The conversion of agricultural land represents a permanent reduction and impact to California's agricultural land resources. The Department generally advises discussion of the following in any environmental review for the loss or conversion of agricultural land:

- Type, amount, and location of farmland conversion resulting directly and indirectly from implementation of the proposed project.
- Impacts on any current and future agricultural operations in the vicinity; e.g., land-use conflicts, increases in land values and taxes, loss of agricultural support infrastructure such as processing facilities, etc.
- Incremental impacts leading to cumulative impacts on agricultural land. This would include impacts from the proposed project, as well as impacts from past, current, and likely future projects.
- Implementation of any City or County Agricultural Mitigation Plans, Programs, or Policies.
- Proposed mitigation measures for impacted agricultural lands within the proposed project area.

B-3

MITIGATING AGRICULTURAL LAND LOSS OR CONVERSION

Consistent with CEQA Guidelines, the Department advises that the environmental review address mitigation for the loss or conversion of agricultural land. An agricultural conservation easement is one potential method for mitigating loss or conversion of agricultural land. (*See* Cal. Code Regs., tit. 14, § 15370 [mitigation includes "compensating for the impact by replacing or providing substitute resources or environments, including through permanent protection of such resources in the form of conservation easements."]; *see also King and Gardiner Farms, LLC v. County of Kern* (2020) 45 Cal.App.5th 814.)

Mitigation through agricultural conservation easements can take at least two forms: the outright purchase of easements or the donation of mitigation fees to a local, regional, or statewide organization or agency whose purpose includes the acquisition and stewardship of agricultural easements. The conversion of agricultural land may be viewed as an impact of at least regional significance. Hence, the search for replacement lands may not need to be limited strictly to lands within the project's surrounding area. A helpful source for regional and statewide agricultural mitigation banks is the California Council of Land Trusts. They provide helpful insight into farmland mitigation policies and implementation strategies, including a guidebook with model policies and a model local ordinance. The guidebook can be found at:

California Council of Land Trusts

Of course, the use of conservation easements is only one form of mitigation, and the Department urges consideration of any other feasible measures necessary to mitigate project impacts.

B-4

Thank you for giving us the opportunity to comment on the Initial Study and Mitigated Negative Declaration for the Chacon Farms Project. Please provide the Department with notices of any future hearing dates as well as any staff reports pertaining to this project. If you have any questions regarding our comments, please contact Farl Grundy, Associate Environmental Planner via email at Farl.Grundy@conservation.ca.gov.

B-5

Sincerely,

Monique Wilber

Monique Wilber
Conservation Program Support Supervisor

RESPONSES TO LETTER B
DEPARTMENT OF CONSERVATION (DOC)

Comment B-1: Introduction

The DOC reviewed the Mitigated Negative Declaration and provided advisory comments regarding the Project's potential conversion of Important Farmland. The Department outlines its role in monitoring farmland resources, emphasizes that it is not taking a position on the Project, and offers general guidance on evaluating agricultural land impacts and potential mitigation options.

Response B-1:

The City appreciates the DOC's clarification that its comments are advisory in nature and are intended to inform the CEQA process rather than advocate for or against the Project. As noted in the Department's letter, the Department "respects local decision-making by informing the CEQA process and is not taking a position or providing legal or policy interpretation." The City acknowledges this distinction and understands that the Department's input is offered to identify resource considerations and potential assessment methodologies, and they do not constitute a directive or requirement for the City to implement particular measures, nor do they alter the City's discretion to determine the significance of impacts or the feasibility of mitigation based on local circumstances and established policy.

Comment B-2: Project Description

DOC states that the Project proposes to subdivide three parcels via a Tentative Tract Map into 419 lots that will result in the development of 419 single-family detached residences, onsite roadways, open spaces and detention basin on 73.97 acres. The residential lots would be a minimum of 4,500 square feet. Residential structures would be 1 or 2 stories in height.

Response B-2:

The City acknowledges the Department's summary of the Project description. The final acreage of agricultural land converted is approximately 75.77 acres, and the Project involves a General Plan Amendment from Very Low Density Residential to Low Density Residential and Zone Change to permit Low Density Residential (LDR) development. For a full project description, see Section 3.1.4 of the Mitigated Negative Declaration.

Comment B-3: Project Considerations

The conversion of agricultural land represents a permanent reduction and impact to California's agricultural land resources. The Department generally advises discussion of the following in any environmental review for the loss or conversion of agricultural land:

- *Type, amount, and location of farmland conversion resulting directly and indirectly from implementation of the proposed project.*
- *Impacts on any current and future agricultural operations in the vicinity; e.g., land-use conflicts, increases in land values and taxes, loss of agricultural support infrastructure such as processing facilities, etc.*
- *Incremental impacts leading to cumulative impacts on agricultural land. This would include impacts from the proposed project, as well as impacts from past, current, and likely future projects.*
- *Implementation of any City or County Agricultural Mitigation Plans, Programs, or Policies.*
- *Proposed mitigation measures for impacted agricultural lands within the proposed project area.*

Response B-3

The City acknowledges the DOC's comment regarding potential indirect impacts and land-use conflicts associated with the Project. As discussed in Section 4.2, Agriculture and Forestry Resources, this issue was thoroughly evaluated in the certified Final Environmental Impact Report (EIR) (SCH# 2020120312) for the General Plan Update, which the City Council adopted through Resolution No. 3949, on November 15, 2022:

"The General Plan Update does not require the preservation of designated farmland; implementation of the General Plan Update could result in the conversion of farmland to non-agricultural uses. Any additional mitigation measures, such as the preservation of designated farmland, are not feasible and conflict with the other objectives of the General Plan Update, specifically to" proactively plan for and accommodate local and regional growth in a responsible manner "and "attract and retain businesses and industries that provide jobs for local residents," and would potentially discourage future development envisioned in the General Plan Update. Although the General Plan Update includes policies and actions to support continued agricultural use within the Study Area, the potential for the conversion of Prime Farmland, Unique

Farmland and Farmland of Statewide Importance as identified by the FMMP to non-agricultural use would be a significant unavoidable impact."[1]

Under CEQA Guidelines §15168, program EIRs may serve as the foundation for later activities that implement the program, allowing subsequent CEQA documents to use and rely on the broader program-level analysis where appropriate. The General Plan Update considered residential uses on the Project site. The agricultural resource impacts associated with converting Important Farmland within the Planning Area, including the infeasibility of preservation-based mitigation, were fully evaluated and disclosed in the General Plan 2040 Program EIR. The Proposed Project does not introduce new agricultural impacts or increase the severity of those identified in the certified EIR. This conclusion is valid even though the City opted to prepare a Mitigated Negative Declaration for the Project.

Accordingly, the CEQA analysis for the Project for agricultural resources could have tiered from the General Plan 2040 Program EIR under CEQA §§15162 and 15168 because the Project would not have new or substantially more significant impacts on agricultural resources than anticipated by the General Plan Update Program EIR, and no additional agricultural mitigation measures are required.

The Project also is consistent with General Plan policies related to managed growth. (General Plan, p. 27.) As the General Plan notes, the City of San Jacinto anticipates substantial growth with the potential to change community character. (*Id*.) Policy LU-2.4 specifically anticipates new development on land used for agriculture.

As discussed below, based on a stand-alone analysis of the Project's impacts to agricultural resources, the Project would not have a significant impact on Important Farmland and does not require mitigation under CEQA. The information below supplements and amplifies the information in the Draft IS/MND.

Project Specific LESA Analysis

To evaluate site-specific agricultural viability, the City prepared a California Agricultural Land Evaluation and Site Assessment (LESA) Model analysis. The LESA Model, developed by the California Department of Conservation (DOC), is an optional quantitative tool available to lead agencies under CEQA for determining the significance of farmland conversion. The LESA assessment completed for the Chacon Farms Project confirms that the Project site is no longer situated within a viable agricultural environment and that the conversion of the site to residential use would not constitute a significant agricultural resource impact under LESA significance thresholds.

The LESA Model is a point-based system combining two components:

- **Land Evaluation (LE)** – 50% of total score.
- **Site Assessment (SA)** – 50% of total score

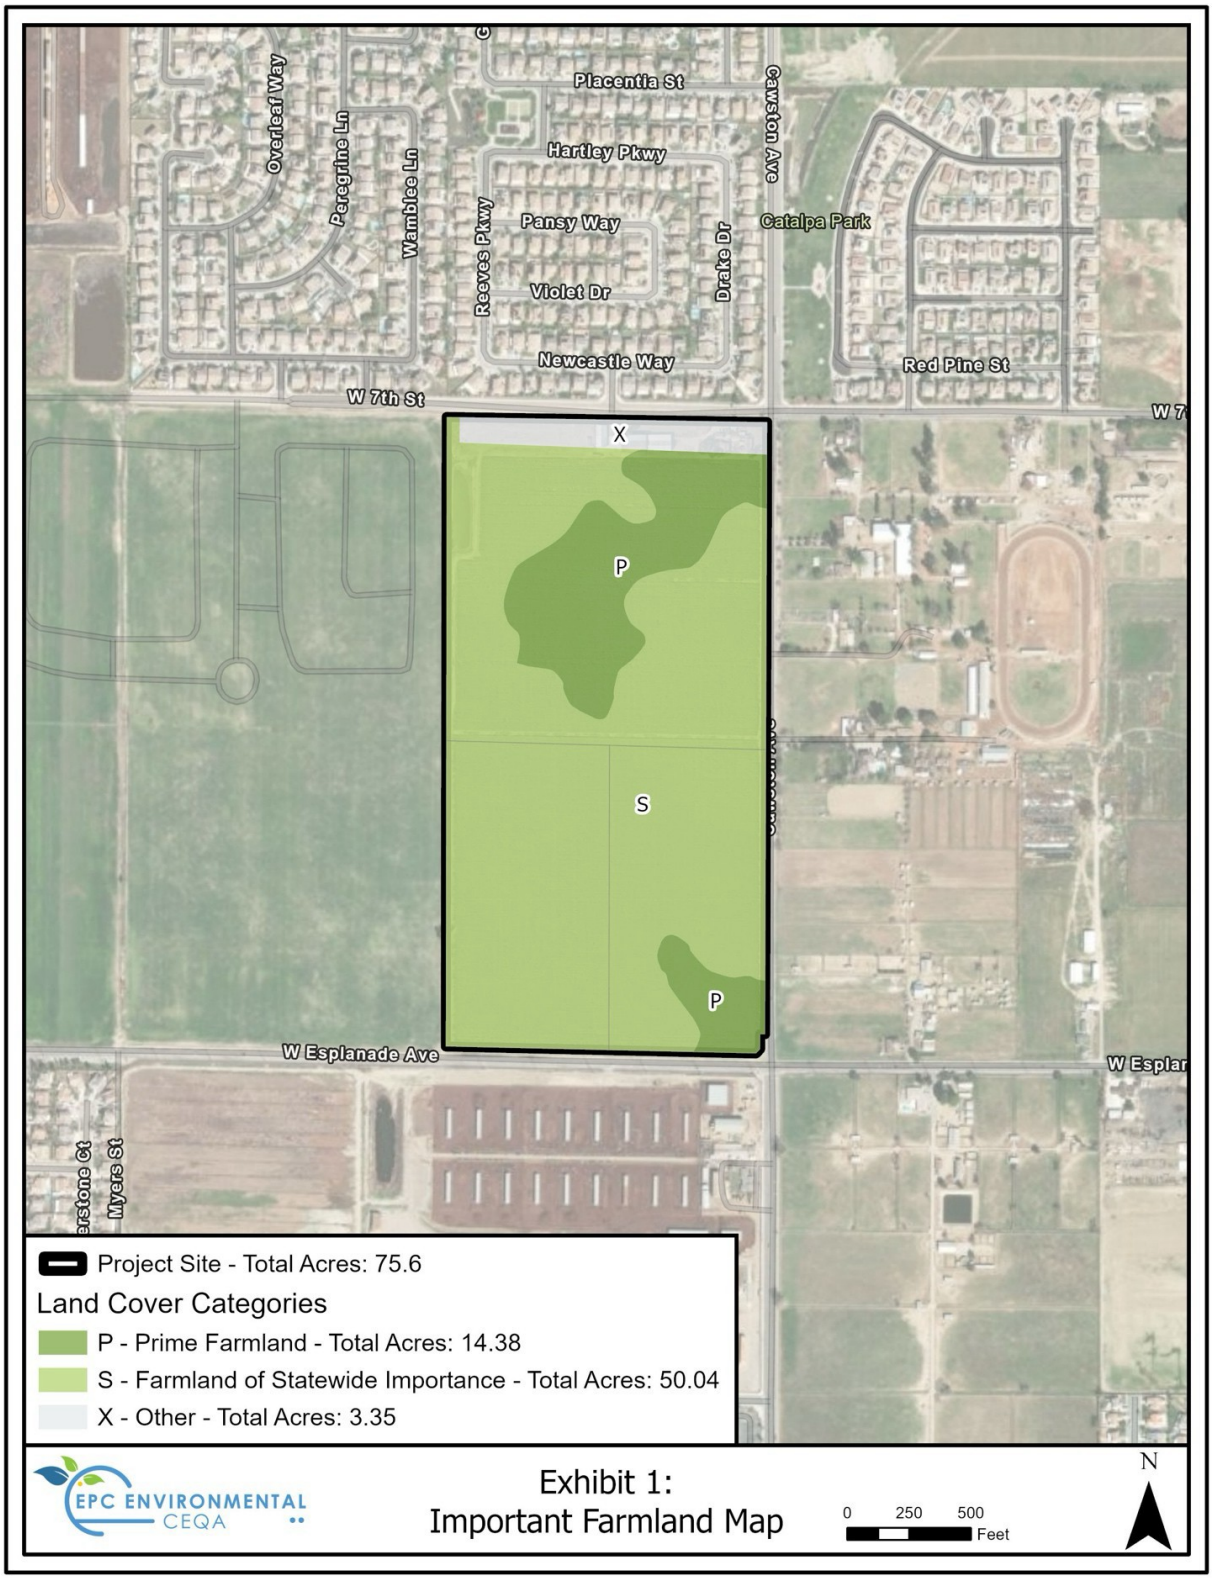
[1] City Council Resolution No. 3949, November 15, 2022.

The combined LE and SA sub scores generate a **Final LESA Score** (0–100). Significance thresholds are defined in Table 2, California LESA Model Scoring Thresholds.

Table 1. California LESA Model Scoring Thresholds

00	Scoring Decision
0-39	Not Considered Significant
40-59	Significant only if both LE and SA ≥ 20
60-79	Considered Significant unless either LE or SA < 20
80-100	80–100 Considered Significant

Land Evaluation (LE) Component (50%)



LE focuses on two factors: Land Capability Classification (LCC) and Storie Index ratings, both reflecting soil qualities relevant to farming.

Land Compatibility Classification

LCC rates soils from I (best) to VIII (least suitable), with subclasses for specific limitations. Each property's LCC Score is calculated by weighting class scores by acreage proportion; it makes up 25% of the total score.

The LE score measures inherent soil quality based on the Storie Index and LCC ratings, derived from USDA Web Soil Survey data as shown in **Exhibit 1, Important Farmland Map,** for the Project site.

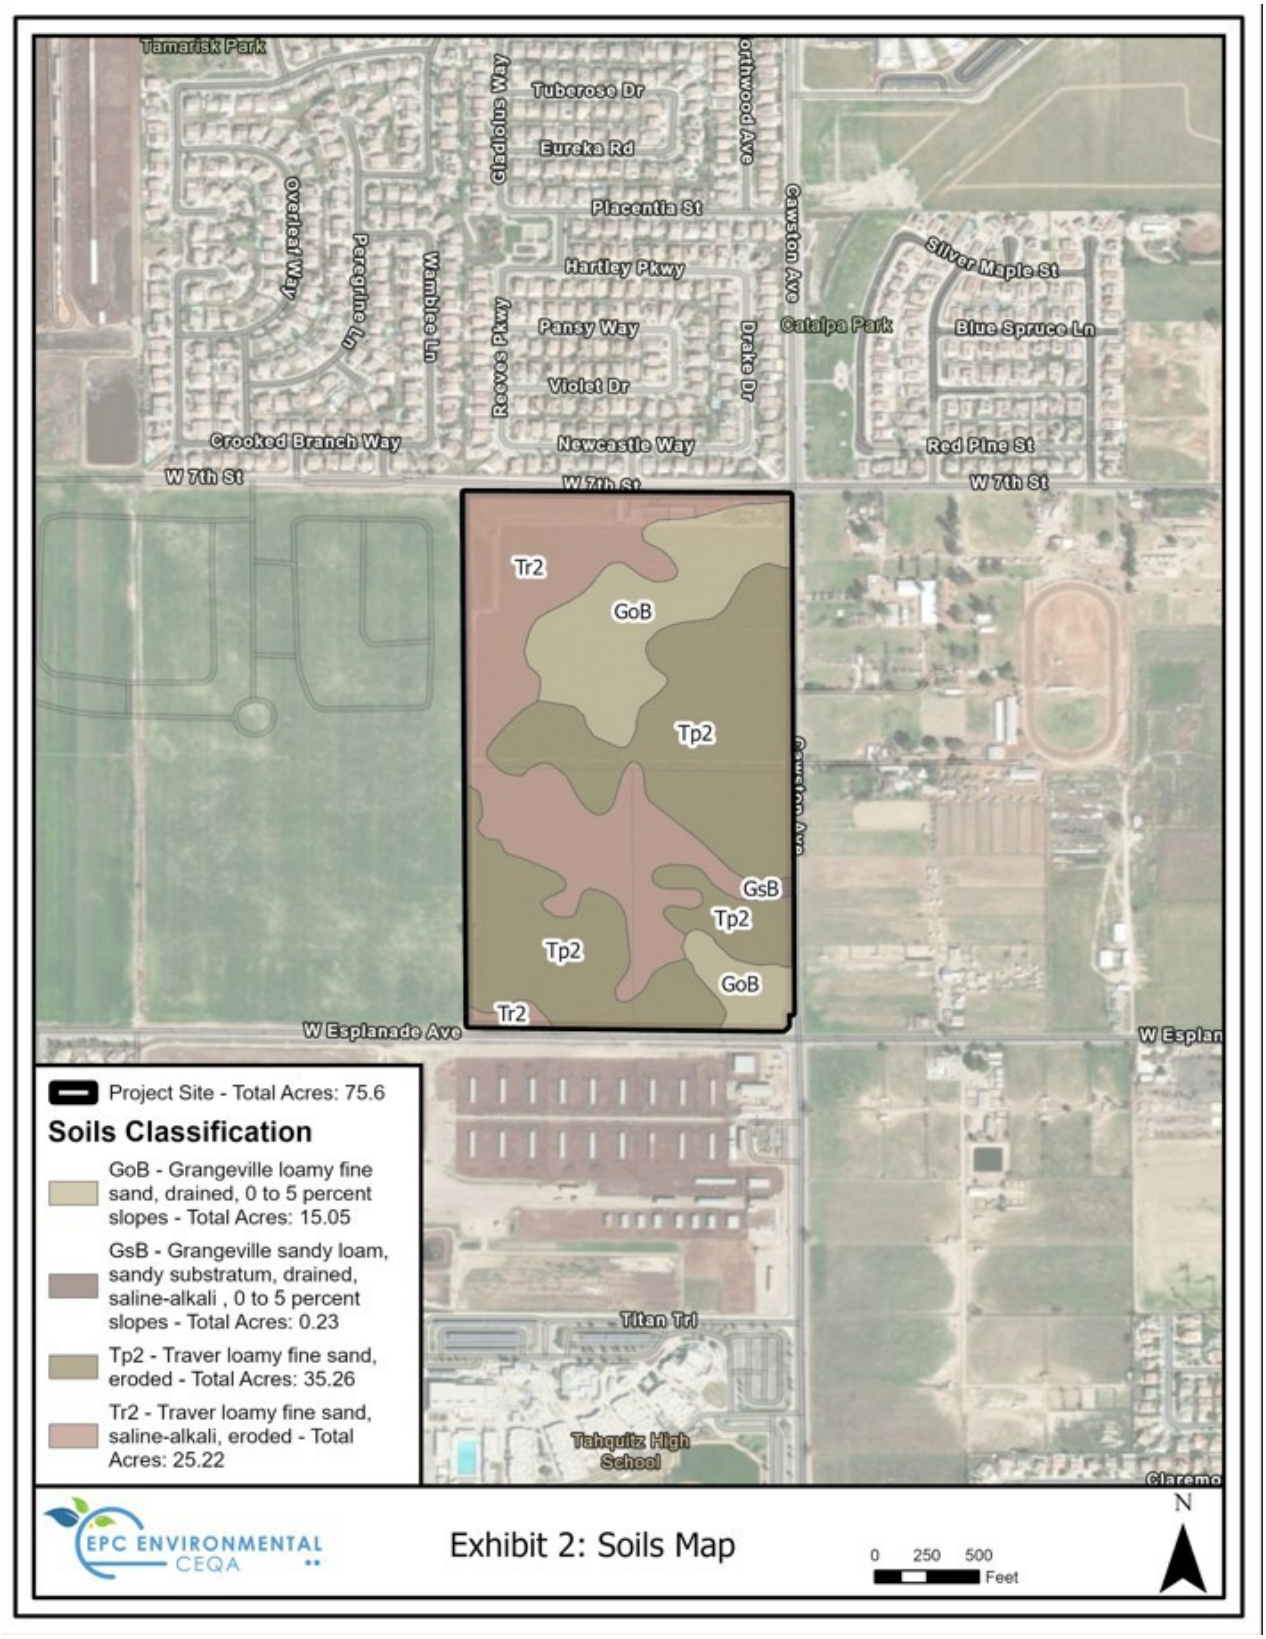
Soil Ratings (LCC and Storie Index)

The Project site is underlain by soils mapped as the Grangeville and Traver series. **(See Exhibit 2, Soils Map.** These soils are identified in the NRCS Web Soil Survey as having inherent limitations for agricultural production, including salinity, restricted drainage, and erosion susceptibility. These limitations influence agricultural productivity and are reflected in two standardized soil quality rating systems used by the LESA Model:

Land Capability Classification (LCC)

- Rates soils from Class I (best) to Class VIII (least suitable).
- Higher numerical values indicate greater limitations for farming.
- For LESA scoring, each soil unit's LCC rating is converted into a point value from 0 to 100 and then weighted by its percentage of the site.



Storie Index Rating

- A 0–100 rating of soil quality based on profile characteristics, texture, slope, drainage, and limiting factors.
- Higher values indicate better inherent soil quality.
- Storie ratings are also weighted by acreage to generate a sitewide average.

Because the site contains only four soil map units (GoB, GsB, Tp2, and Tr2), and because all four occur across the entire 100% Area of Interest (AOI), the weighted averages represent the overall soil quality for the site.

Table 2. Soil Map Units, LCC Ratings, and Storie Index Values

Soil Map Units	% of AOI	LCC Rating (Points)	LCC Weighted Score (×0.25)	Storie Index	Storie Weighted Score (×0.25)	Total LCC and Storie Subscore

Site Assessment (SA) Component (50%)

The Site Assessment (SA) component of the LESA Model evaluates non-soil factors that influence the agricultural viability of a site, including parcel size, water availability, surrounding agricultural lands, and the presence of protected agricultural or conservation areas. These factors collectively represent 50 percent of the total LESA score. The SA analysis for the Project site is based on the Zone of Influence (ZOI), defined as the 0.5-mile area surrounding the site, consistent with DOC methodology.

Exhibit 3, Zone of Influence Map illustrates the 0.5-mile ZOI used to assess surrounding agricultural land conditions, fragmentation, and adjacent to urban or non-agricultural uses.

Exhibit 4, Protected Resources Map shows any Williamson Act enrolled lands, conservation easements, and other protected agricultural resource lands relative to the Project site.

Table 3. Site Assessment Scoring Summary

SA Factor	Rationale	Score	Weight	Weighted Score
Project Size (75.7 acres)	Large parcel size supports higher agricultural resource value	100	0.15	15.00
Water Resource Availability	EMWD UWMP prioritizes M&I demand; agricultural water unreliable; capped well not viable	0	0.15	0.00
Surrounding Agricultural Land	Aerials show fragmentation/urban conversion in ZOI	10	0.15	1.50
Protected Resource Land	No Williamson Act, no Criteria Cell, <0.01% protected	0	0.05	0.00
SA Subscore Total	—	—	—	**16.50**

Scoring Assumptions and Supporting Justification

Water Resource Availability (0 points): Based on EMWD's 2020 Urban Water Management Plan, agricultural water deliveries are not reliably available or economically feasible due to prioritization of municipal/industrial demand, tiered pricing, and replenishment assessments. The capped on-site well is not a guaranteed long-term agricultural supply.

Surrounding Agricultural Land (10 points): ZOI analysis and current aerial imagery show substantial urbanization, in the project area and cleared land to the west/north, indicating fragmentation and loss of agricultural support services.

Protected Resource Lands (0 points): The site is not under a Williamson Act contract and is not located within an MSHCP Criteria Cell or other protected resource designation.

Final LESA Score and Significance Determination

- **LE Sub score:** 23.87
- **SA Sub score:** 16.50
- **Final LESA Score: 40.37**

Under the LESA scoring system, a score of 40–59 is considered significant only if both LE and SA sub scores are ≥ 20.

Because the SA Sub score (16.50) is below 20, the Project's Final LESA Score of 40.37 is not considered significant under the LESA Model.

As supported by the analysis in the Mitigated Negative Declaration and the Project-specific LESA analysis above, the Project would not indirectly result in farmland conversion. The Project site is already in an area with fragmented farmland and would not increase the likelihood of the conversion of surrounding farmland. The Project also does not impact existing or future agricultural operations in the vicinity, mainly because the land immediately surrounding the Project site is not currently used for agricultural purposes, (confirmed through review of current

aerial imagery and jurisdictional GIS/General Plan land use mapping within the 0.5-mile zone of influence [see Exhibit 3]). The nearest active agricultural operation is a dairy located to the south of Esplanade Avenue in the City of Hemet, which has a General Plan Land Use designation of Neighborhood Commercial (NC), and Medium Density Residential (MDR). Thus, all land surrounding the Project Site has land use designations that allow non-agricultural uses. The Project is not near any land protected by Williamson Act contracts and would not result in the cancellation of such a contract. Accordingly, the Project would have less than significant impacts to agricultural resources and no mitigation is required.

Comment B-4: Mitigating Agricultural Land Loss or Conversion

Consistent with CEQA Guidelines, the Department advises that the environmental review address mitigation for the loss or conversion of agricultural land. The Department urges consideration of any other feasible measures necessary to mitigate project impacts.

Response B-4:

The Project's finding of **Less Than Significant Impact** to agricultural resources is supported by the analysis in the Draft IS/MND (Section 4.2, Agriculture and Forestry Resources). It also is supported by the LESA threshold analysis above, and by the application of CEQA tiering principles. See Response B-3.

Comment B-5: Conclusion and Request for Notices and Documents

Thank you for giving us the opportunity to comment on the Initial Study and Mitigated Negative Declaration for the Chacon Farms Project. Please provide the Department with notices of any future hearing dates as well as any staff reports pertaining to this project.

Response B-5:

The City acknowledges the DOC's gratitude and request for ongoing notifications. The DOC will be provided with notices of any future public hearings, and any staff reports pertaining to the Chacon Farms Project in accordance with CEQA statutes and guidelines.

Finding: The comments do not identify any new significant environmental impacts, do not demonstrate that previously identified impacts would be substantially more severe than disclosed in the Draft IS/MND, and do not require the addition of new or considerably different

mitigation measures or project alternatives. Accordingly, the City finds that recirculation of the IS/MND is not required under CEQA Guidelines §15088.5.

RE: PUBLIC COMMENT – Chacon Farms Project

We are concerned about the safety of the children, workers and clients utilizing Cawston Avenue between 7th and Esplanade.

Our property shares the street and entrances with the East entrance to the proposed development. The street is one lane each way with a drainage ditch on one side and a temporary sidewalk on the other. There are three schools on the block South of us with two lanes each way and one school on the block North with two lanes each way.

There are increasingly more vehicles, children walking, riding scooters, and running in PE classes along with clients, delivery trucks and large horse trailers coming to and from the gated entries necessary for the secondary containment of horses at Talley Meadows Layups and Retirement. Our facility is a busy working horse ranch of sixty acres with over one hundred horses in rehabilitation and retirement.

We feel it imperative to widen and improve Cawston Avenue to match the next block North at 7th and South at Esplanade to manage the increased traffic that will be coming with this and future planned development and schools. The bottleneck in this one block creates serious traffic and pedestrian hazards.

Sincerely,

Joe B. Talley Jr.

Responses To Letter C
Talley Meadows Ranch

Comment: Improve Cawston Avenue for Pedestrian and Traffic Safety

The commenter expressed concern about traffic safety and pedestrian hazards on Cawston Avenue along the project frontage. They noted that the street is currently one lane each way with a drainage ditch on one side, and this bottleneck is a serious safety concern given the presence of three schools nearby and the traffic generated by their horse ranch. The commenter felt it was "imperative" to widen and improve Cawston Avenue to match the configuration north of 7th Street and south of Esplanade Avenue

Response:

The City acknowledges the commenter's concern regarding pedestrian and traffic safety, including the current existing two-lane undivided condition of Cawston Avenue. However, the comment does not raise an issue on the adequacy of the CEQA document, which indicates that the Project would not create a new traffic safety hazard. (See Draft IS/MND section 4.17.2.c.) As documented in the Draft Transportation Impact Study, Cawston Avenue is classified as a major roadway and is operating well below its available capacity, with no existing operational or safety deficiencies identified along the project frontage. Traffic operations along Cawston Avenue, including roadway segments and study intersections, currently operate at acceptable levels of service consistent with City standards, and the project would not degrade roadway performance or introduce unsafe conditions.

Issues related to the safety and functional design of the street frontage also will be addressed during the Tentative Tract Map (No. 39076) engineering review and approval process, which ensures that any frontage improvements or design details comply with the City's adopted roadway, pedestrian, and safety standards.

While the comment does not raise an issue regarding the adequacy of the Draft IS/MND and therefore does not require a written response under the California Environmental Quality Act (CEQA) requirements, the City provides the following response for informational purposes.

Required Off-Site Frontage Improvements

Cawston Avenue is classified as a major roadway by the City of San Jacinto. To address the existing non-standard condition and ensure the Project conforms to the City's Major Thoroughfare Standards, the Project is required to implement the following off-site frontage improvements adjacent to the west side of Cawston Avenue as Conditions of Approval:

- Addition of one travel lane.
- Construction of a standard sidewalk to enhance pedestrian safety.
- Construction of a 12-foot-wide parkway.
- Construction of a curb and gutter section.

- Widening of the roadway section to fully conform to the City's Major Roadway Standards.

These specific improvements are mandated by City Engineering after their review of Tentative Tract Map No. 39076. The scope of work listed above constitutes the full extent of the Project's required commitment for its direct frontage, ensuring compliance with all applicable City Ordinances. The requirement to add a travel lane addresses the commenter's concern with narrow streets and "bottlenecks." The addition of a lane also allows slower vehicles to be in a separate lane than faster vehicles. The requirement to add a sidewalk addresses the commenter's concern about pedestrian safety.

Finding: The comments do not identify any new significant environmental impacts, do not demonstrate that previously identified impacts would be substantially more severe than disclosed in the Draft IS/MND, and do not require the addition of new or considerably different mitigation measures or project alternatives. Accordingly, the City finds that recirculation of the IS/MND is not required under CEQA Guidelines §15088.5.

Executive Summary

On behalf of Chacon, LLC, Stantec Consulting Services Inc. (Stantec) has prepared this Phase II Environmental Site Assessment (ESA) report for the property located southwest of Seventh Street and Cawston Avenue in the City of San Jacinto, County of Riverside, California (the Subject Property; **Figure 1**). The investigation was performed based on the scope of work set forth in Stantec's proposal entitled *Proposal for Limited Phase II Environmental Site Assessment (ESA)*, dated November 13, 2025. Chacon, LLC (the "User") has been designated as the User of this report.

The Subject Property consists of approximately 73.97 acres of agricultural land. With respect to the Draft Initial Study/Mitigated Negative Declaration (ISMND) submitted for public and agency input, the California Department of Toxic Substances Control (DTSC) concluded that, based on review of historical documents including aerial photographs and topographic maps, the Subject Property appears to have been utilized for agricultural use. Due to the potential for residual agricultural chemicals to be present in shallow soils, DTSC requested sampling and analysis of shallow soil for the presence of residual organochloride pesticides (OCPs) and heavy metals (arsenic).

To investigate this concern expressed by the DTSC, Stantec completed a Phase II ESA at the Subject Property in November of 2025, which included the following scope of work:

- Stantec advanced one (1) boring per four (4) acres in a grid pattern across the 73 acres of agricultural land at the Subject Property. Based on the grid sampling, a total of eighteen (18) soil borings were advanced to a maximum depth of 3 feet below ground surface (bgs) throughout the Subject Property. Soil samples were collected at 0.5 feet bgs depth intervals for analysis of OCPs and arsenic. Accordingly, 18 shallow soil samples collected from the 0.5-foot intervals were submitted to the laboratory for analysis of OCPs and arsenic. The remaining 18 deeper soil samples collected from 2.5-3.0 feet were submitted to the laboratory and placed on hold, pending the results of the shallow analysis of OCPs and arsenic (to determine whether further analysis was warranted).
- Four (4) of the 18 soil borings (SB-9 through SB-12) were further advanced to a maximum depth of 15-ft bgs in the area with historical livestock activities and converted into dual-nested soil vapor probes at 5- and 15-ft bgs for a methane survey (See **Figure 2** for locations).

The laboratory reported no detections of OCPs or arsenic above the laboratory reporting limit in any of the soil samples submitted for analysis (*i.e.*, the results were "non-detect"), as presented in **Table 1**. The laboratory reporting limit for arsenic was 5.0 milligrams per kilogram (mg/kg), which exceeded regulatory thresholds for residential soil set at 0.68 mg/kg (**Appendix A**). However, arsenic occurs naturally in soil throughout the State of California at levels of up to 12 mg/kg and, therefore, commonly exceeds the regulatory threshold due to naturally-occurring conditions. Accordingly, the State of California typically uses the background level, as presented in DTSC's HERO Note 11, as the cleanup standard for arsenic. No arsenic was detected in any of the soil samples collected at the Subject Property at concentrations exceeding applicable cleanup levels.

The soil vapor probes were installed by directly pushing them into the ground. Based on the DTSC guidance, the installed vapor probes were allowed to set for at least two (2) hours prior to sampling to allow the seals to set. Probe pressure readings were recorded on field data sheets prior to sample collection or purging. Prior to sample collection, three tubing volumes were purged through a pump at a flow rate of 150-200 ml/minute. After purging was complete, the surface-end of the Teflon tubing was connected to a RKI Eagle, and soil vapor was drawn through the device and analyzed on site for methane, hydrogen sulfide, oxygen, and carbon monoxide.

Field readings were collected on two days (December 4 and 5, 2025) at least 24 hours apart. The field readings showed methane detections ranging from 310 to 500 parts per million by volume (ppmV), which levels are significantly below the standard expressed by the City of San Jacinto, which was 12,500 ppmV, and also significantly below the other published County Fire Authority standard of 5,000 ppmV (**Table 2**). Additionally, oxygen and carbon dioxide percentages showed solid correlation and are typical of aerobic conditions in the soil.

Based on these results, the Subject Property's historical agricultural and livestock uses are not considered a recognized environmental condition (REC) pursuant to ASTM E1527-21 or a concern in relation to the contemplated redevelopment of the Subject Property for residential purposes. Therefore, Stantec recommends no further investigation regarding these issues, or in regard to the environmental condition of the Subject Property.

1.0 INTRODUCTION

On behalf of Chacon, LLC, Stantec Consulting Services Inc. (Stantec) has prepared this Phase II Environmental Site Assessment (ESA) report for the property located southwest of Seventh Street and Cawston Avenue in the City of San Jacinto, County of Riverside, California (the "Subject Property"; **Figure 1**). The investigation was performed based on the scope of work set forth in Stantec's proposal entitled *Proposal for Limited Phase II Environmental Site Assessment*, dated November 13, 2025. Chacon, LLC (the "User") has been designated as the User of this report.

1.1 BACKGROUND

The Subject Property consists of approximately 73.97 acres of agricultural land. The Draft Initial Study/Mitigated Negative Declaration (ISMND) was submitted for public and agency input and the California Department of Toxic Substances Control (DTSC) concluded, based on review of historical documents, including aerial photographs and topographic maps, that the Subject Property appears to have been utilized for agricultural use. Due to the potential for residual agricultural chemicals to be present in shallow soils, DTSC requested that shallow soils be sampled and analyzed in order to determine whether residual organochloride pesticides (OCPs) or heavy metals (arsenic) were present above applicable regulatory thresholds for residential use.

Accordingly, to address DTSC's concern, Stantec completed a Phase II ESA at the Subject Property in November 2025. The results of that investigation are presented in the following sections of this report and, as discussed in detail, have concluded that the historical agricultural use of the Subject Property represents neither a recognized environmental condition nor a human health risk in contemplation of the proposed residential development of the Subject Property.

2.0 FIELD INVESTIGATION

Prior to the commencement of fieldwork activities, Stantec made the following preparations.

2.1 PRE-DRILLING ACTIVITIES

- Stantec visited the Property to mark the proposed boring locations. Subsequent to the marking, Underground Service Alert (USA) was notified at least 72-hours prior to the commencement of drilling activities; and,
- In accordance with federal Occupational Safety and Health Administration (OSHA) regulations (29 CFR, Section 1910.120), Stantec generated a site-specific Health and Safety Plan (HASP) for the Property. All Stantec personnel and subcontractors associated with the project were required to be familiar with and comply with all provisions of the HASP.

2.2 INVESTIGATION

To address the requested work by the DTSC outlined above, Stantec completed a Limited Phase II ESA in November 2025. Stantec provided the services of a field geologist to supervise and direct the advancement of multiple soil, and soil vapor borings at the Property. All work was conducted under the direct oversight of a State of California professional and included the following:

- Stantec advanced one (1) boring per four (4) acres in a grid pattern across the 73 acres of agricultural land at the Subject Property. Based on the grid sampling a total of eighteen (18) soil borings were advanced to a maximum depth of 3 foot below ground surface (bgs) throughout the Subject Property. Soil samples were collected at 0.5 feet bgs depth intervals for analysis of OCPs and arsenic. The 18 shallow soil samples collected from the 0.5-foot intervals were submitted to the laboratory for analysis of OCPs and arsenic. The remaining 18 deeper soil samples collected from 2.5- 3.0 feet were submitted to the laboratory and placed on hold, pending the results of the shallow analysis of OCPs and arsenic.
- Four (4) of the 18 soil borings (SB-9 through SB-12) were further advanced to a maximum depth of 15-ft bgs in the area with historical livestock activities and converted into dual-nested soil vapor probes at 5- and 15-ft bgs for a methane survey (See **Figure 2** for locations).

2.2.1 Soil Boring and Sampling Procedures

Each pesticide boring location was drilled with a hand auger to a depth of three (3) feet below ground surface (bgs) to clear the location of utilities and collect the required soil samples. Soil samples collected within the upper three (3) feet were collected by discharging the hand auger contents directly into pre-cleaned laboratory-provided eight-ounce glass jars with Teflon®-lined lids. All sample containers were labeled with the appropriate identification information (boring number, sample depth, sample collection

date, and sample collection time). After collection the soil samples were placed in an iced cooler for preservation until delivery to the laboratory.

2.2.2 Soil Vapor Probe Construction

The soil vapor probes were installed in general accordance with the methodologies outlined in the July 2015 California Department of Toxic Substances Control (DTSC) "Advisory - Active Soil Gas Investigations" (DTSC Advisory).

Four additional soil borings (SB-9 through SB-12) were further advanced into native soils to a depth of 15 feet bgs with a Geoprobe drilling rig that utilized a hydraulically driven direct push system equipped with 1.5-inch outer diameter rods. Following the advancement of the borings to the terminal depth, the vapor sampling probe were installed in the borehole with sampling screens positioned at 5- and 15-feet bgs and connecting the screen up to the ground surface via dedicated Teflon tubing.

The annulus around the exposed sampling screens was backfilled with a silica sand pack to an elevation of approximately six inches above the sampling interval. Above the filter pack, a 12-inch transition seal was constructed using fine bentonite granules. From that point to ground surface, hydrated bentonite granules will be utilized to seal the annular space. At the surface, the exposed Teflon tubing was capped with tight fitting plastic end-caps and labeled to indicate sampling depth.

2.2.3 Field Equipment Cleaning Procedures

To maintain quality control during drilling operations, all drill rods and reusable soil sampling equipment was decontaminated using a triple bucket rinse. Prior to drilling at a given location or sampling interval, all equipment coming in direct contact with soil samples was scrubbed with an Alconox scrub solution followed by a clean tap water rinse and then a final distilled water rinse.

3.0 TESTING PROCEDURES

3.1 SOIL SAMPLING METHODOLOGY

All chemical analyses was performed at State of California-certified laboratories. Collected soil samples were analyzed at Jones Environmental, Inc. (Jones) located in Santa Fe Springs, California. All samples were managed under strict chain-of-custody. The soil results are discussed below and presented in **Table 1.** Complete laboratory reports, including QA/QC documentation is included in **Appendix A**.

3.2 METHANE SAMPLING METHODOLOGY

The soil vapor probes were allowed to set for at least two (2) hours prior to sampling to allow the seals to set. Probe pressure readings were recorded on field data sheets prior to sample collection or purging. Prior to sample collection, three tubing volumes were purged through a pump at a flow rate of 150-200 ml/minute. After purging was complete, the surface-end of the Teflon tubing was connected to a RKI Eagle and soil vapor was drawn through the device and analyzed on site for methane, hydrogen sulfide, oxygen, and carbon monoxide.

The survey included two rounds of field sampling performed 24-hours apart – one round on December 4, 2025, and the second round of sampling was performed on December 5, 2025.

4.0 INVESTIGATION RESULTS

4.1 FIELD OBSERVATIONS

On November 20, 2025, Stantec personnel oversaw the advancement of eighteen (18) soil borings at the Subject Property (A1-0.5 through F3-0.5) to 3-ft bgs and four (4) borings (SB-9 through SB-12) to 15-ft bgs. Soils encountered during this round of assessment consisted of silty sand to clayey sands. No staining or odor was observed in any of the borings advanced during this assessment. All boring locations are depicted on **Figure 2**.

4.2 METHANE SAMPLE RESULTS

Field readings were collected on two days (December 4 and 5, 2025) at least 24 hours apart. The field readings showed methane detections ranging from 310 to 500 parts per million by volume (ppmV) which is significantly below the verbal City of San Jacinto standard of 12,500 ppmV and published County Fire Authority Standard of 5,000 ppmV (**Table 2**). Additionally, oxygen and carbon dioxide percentages showed solid correlation and are typical of aerobic conditions in the soil.

4.3 ANALYTICAL RESULTS

Laboratory analytical test results from this assessment are attached as **Appendix A**. A summary of the analytical data from this assessment is provided in **Tables 1 and 2**. The laboratory test results from this phase of investigation are discussed below. All soil boring locations from this assessment are presented on **Figure 2**.

Soil Results

The laboratory reported that there were no detections of OCPs or arsenic above the laboratory reporting limit in any of the soil samples submitted for analysis (*i.e.*, the results were “non-detect”) as presented in **Table 1**. The laboratory reporting limit for arsenic was 5.0 milligrams per kilogram (mg/kg), which exceeded regulatory thresholds for residential soil set at 0.68 mg/kg (**Appendix A**). However, arsenic occurs naturally in soil throughout the State of California at levels of up to 12 mg/kg and, therefore, commonly exceeds the regulatory threshold due to naturally-occurring conditions. Accordingly, the State of California typically uses the background level, as presented in DTSC’s HERO Note 11, as the cleanup standard for arsenic and no arsenic was detected at the Subject Property at concentrations exceeding applicable cleanup levels.

5.0 CONCLUSIONS AND RECOMMENDATIONS

There were no methane detections in the former livestock areas at concentrations exceeding typical levels of concern (generally considered to be 0.5% by volume, or 5,000 parts per million by volume [ppmV] methane) – or above standards articulated by the City of San Jacinto or other County Fire Authority. Accordingly, based on the data, and in light of the contemplated redevelopment of the Subject Property for residential purposes, Stantec anticipates no further action or investigation regarding methane in soil vapor at the Subject Property.

Based on these results, the Subject Property's historical agricultural use is not considered a recognized environmental condition (REC) or a concern to contemplated redevelopment for residential purposes, nor are the former livestock areas, and Stantec recommends no further investigation regarding these issues – or in regard to the environmental condition of the of the Subject Property.

6.0 LIMITATIONS

The conclusions presented in this report are professional opinions based on data described in this report. The opinions of this report have been arrived at in accordance with currently accepted hydrogeologic and engineering standards and practices applicable to this location and are subject to the following inherent limitations. Stantec makes no other warranty, either expressed or implied, concerning the conclusions and professional advice that is contained within the body of this report.

Inherent in most projects performed in a heterogeneous subsurface environment, continuing excavation and assessments may reveal findings that are different than those presented herein. This facet of the environmental profession should be considered when formulating professional opinions on the limited data collected on these projects.

This report has been issued with the clear understanding that it is the responsibility of the owner, or their representative, to make appropriate notifications to regulatory agencies. It is specifically not the responsibility of Stantec to conduct appropriate notifications as specified by current County and State regulations.

The information presented in this report is valid as of the date our exploration was performed. Site conditions may degrade with time; consequently, the findings presented herein are subject to change.

NOTES:

All concentrations reported in milligrams of metal per kilogram of soil (mg/kg)

(1) Sample depth is reported as feet below ground surface

(2) Screening level value is determined by the more conservative value from the California DTSC HERO Note 3, updated March 2025 or USEPA RSLs, updated November 2024

(3) Arsenic has been found to exist in naturally in soils up to 22 mg/kg in the state of California. It is generally considered acceptable at concentrations of 12 mg/Kg or less

(4) Chernoff G., Bosan W., and Oudiz B., DTSC, Determination of a Southern California Regional Background Arsenic Concentration in Soil

< - Indicates the concentration was not detected above the laboratory method reporting limit.

BOLD - Indicates the concentration is above the laboratory reporting level

Concentration exceeds USEPA Region 9 RSL or DTSC Hero Note 3

Concentration exceeds Southern California regional background levels

Concentration exceed the California Hazardous Waste Level

ABBREVIATIONS:

DTSC - Department of Toxic Substances Control

HERO - Human and Ecological Risk Office

NA - Not analyzed

ND - Not detected

NE - Not established

STLC - Soluble Threshold Limit Concentration

USEPA RSL - United States Environmental Protection Agency Regional Screening Levels, residential use.

Notes and Definitions

ND	Analyte NOT DETECTED at or above the reporting limit
RPD	Relative Percent Difference
E	Estimated Concentration; concentration exceeds calibration range.
LCC	Leak Check Compound
MDL	Compound Reported to Method Detection Limit
1	Recovery outside of acceptable limits. LCS/LCSD recoveries and %RSD were within QC limits, therefore data was accepted.
SMSR	Sample matrix prevented adequate surrogate recovery.
J	Value less then PQL but greater than MDL.
HHSR	High hydrocarbon concentration in this sample prevented adequate surrogate recovery.
SMTAR	Sample matrix prevented adequate recovery of target analytes.
OV	Sample was filtered in the lab before extraction.
HHTAR	High hydrocarbon concentration prevented in-range recovery of target analytes.
IHRPD	Target analyte recoveries were outside of range but accepted due to passing RPDs
AROL	Target analyte recovery exceeded recovery range but was accepted due to ND of that analyte in MB and sample(s).
ISO-H	Isomers could not be sufficiently chromatographically resolved according to method requirements due to hydrocarbon interference or other matrix effects. The isomers' reported individual concentrations were each calculated as the average of each of the individual isomers' concentrations.
2	Recovery outside of acceptable limits for either LCS or LCSD. CCV and LCS or LCSD recoveries were within limits; therefore data was accepted.
3	RPD outside of acceptable limits. Target analyte recoveries were within QC limits; therefore, data was accepted.
4	LCS and/or LCSD recoveries exceeded acceptability ranges. Target analyte recoveries were accepted due to passing CCV, in-range LCS/LCSD RPDs, and a clean MB in which all target analytes were < RL.
5	MS and/or MSD recoveries exceeded acceptability ranges. Target analyte recoveries were accepted due to passing CCV, in-range LCS/LCSD RPDs, and a clean MB in which all target analytes were < RL.
SMTAR	Sample matrix prevented adequate recovery of target analytes.
RV	Surrogate recovery outside of control limits due to required dilution.
ASP	Hydrocarbons in this sample most closely resemble asphalt.
@	Surrogate is outside acceptable limits. All other QC parameters in control, therefore data was accepted.
S	Sample was subjected to elemental sulfur cleanup by EPA 3660B.
TIC	Tentatively Identified Compound. Compound is not in the calibration mix and does not have a valid calibration. All reported detections are estimated.

San Bernardino, CA 92408	Project Manager:	Jim DeWoody	12/02/25 15:01

TH1	This sample was analyzed outside the recommended EPA holding time.
YP	Associated CCV outside of control limits low.
IB	CCV recovery above limit; analyte not detected
LO	MS and/or MSD result unavailable. Batch accept. based on LCS rec.
YQ	Associated CCV outside of control limits high.
GN	Surrogate recovery is outside of control limits
LG	Surrogate recovery below the acceptance limits.
LH	Surrogate recovery above the acceptance limits.
AZ	Surr. recovery outside of acceptance limits due to matrix interf.
HN	Low concentration matrix spike recovery out of limits
HO	High concentration matrix spike recovery out of limits
M	A matrix effect is present.
LR	LCS recovery below method control limits.
TW	LCS recovery exceeds control limit.

SAMPLE CONDITION RECORD

1. Are the samples within correct temperature criteria? (0 - 6°C)	No
2. If not within temp. criteria, were samples received on ice?	Yes
3. If not within temp. criteria, were samples received on same day of sampling?	No
4. Is the Chain of Custody (COC) received filled out completely?	Yes
5. Does the total number of containers received match COC?	Yes
6. Are the sample container label(s) consistent with COC?	Yes
7. Are the sample container(s) intact and in good condition?	Yes
8. Were the proper containers & sufficient volume for analyses requested on COC?	Yes
9. Was the proper preservative indicated on COC/container for analyses requested?	Yes
10. Are the containers for volatile analysis free of headspace? (EPA 8260 water)	N/A
EDF Requested	No

Re: Comment on Mitigated Negative Declaration, Chacon Farms Project (SCH 2025101241), March 24, 2026, Planning Commission Agenda Item 5.1

Dear Chair Peterson, Vice Chair Scott, Honorable Commissioners and Planner Hernandez:

This comment is submitted on behalf of Supporters Alliance For Environmental Responsibility ("SAFER") regarding the Initial Study and Mitigated Negative Declaration ("IS/MND") prepared for the Chacon Farms Project (SCH 2025101241), which proposes the development of master-planned residential development consisting of 419 dwelling units as well as the construction of onsite roadways, a detention basin, parks, and on-site landscaping on 73.97-net acres, located at 710 Cawston Avenue North (APNs 432-260-009, 432-260-026, and 432-260-027) in the City of San Jacinto ("Project"). **D-1**

SAFER is concerned that the IS/MND is improper under the California Environmental Quality Act due to the IS/MND's failure to adequately assess the Project's potentially significant environmental impacts. SAFER requests that an environmental impact report (EIR) be prepared for the Project rather than an MND because there is a fair argument that the Project may have adverse environmental impacts. An EIR will ensure that potentially significant impacts of this Project are fully disclosed, analyzed, and mitigated. **D-2**

March 24, 2026
Comment on Mitigated Negative Declaration, Chacon Farms Project (SCH 2025101241),
March 24, 2026, Planning Commission Agenda Item 5.1
Page 2 of 2

SAFER reserves the right to supplement this comment throughout the administrative process. *Galante Vineyards v. Monterey Peninsula Water Management Dist.*, 60 Cal. App. 4th 1109, 1121 (1997).

Sincerely,

Richard Drury
Lozeau Drury LLP

Responses To Letter D

Supporters Alliance For Environmental Responsibility (SAFER) – Lozeau Drury LLP, March 24, 2026

Comment D-1:

The commenter identifies the project and states that the comment is submitted on behalf of Supporters Alliance For Environmental Responsibility (SAFER) regarding the Initial Study and Mitigated Negative Declaration prepared for the Chacon Farms Project.

Response D-1:

The City acknowledges the comment. The letter was received on March 24, 2026, after the close of the 30-day public review period for the Draft IS/MND, which extended from October 28, 2025 through November 27, 2025. Although CEQA does not require a written response to comments on a Mitigated Negative Declaration, and does not require consideration of late comments, the City has elected to respond as a matter of good public policy and transparency.

Comment D-2:

The commenter asserts that the IS/MND is improper under CEQA due to its alleged failure to adequately assess the Project's potentially significant environmental impacts, requests preparation of an environmental impact report (EIR) on the basis that a fair argument exists that the Project may have adverse environmental impacts, and reserves the right to supplement the comment throughout the administrative process.

Response D-2:

Under CEQA, an EIR is required only where substantial evidence in the record supports a fair argument that a project may have a significant effect on the environment. (Pub. Resources Code, § 21080(d); CEQA Guidelines, § 15064(f)(1).) Substantial evidence consists of facts, reasonable assumptions predicated on facts, and expert opinion supported by facts; it does not include argument, speculation, or unsubstantiated opinion. (Pub. Resources Code, § 21080(e); CEQA Guidelines, § 15384.) The comment letter identifies no specific impact, technical deficiency, or evidence in support of its request for an EIR, and therefore does not provide substantial evidence supporting a fair argument under CEQA.

The Draft IS/MND analyzed each environmental issue area required by Appendix G of the CEQA Guidelines, supported by Project-specific technical studies and, as discussed in the responses to Letters A and B, by a supplemental Phase II Environmental Site Assessment and a California LESA Model analysis included as appendices to this Final IS/MND. The commenter's reservation of rights is noted; any supplemental comments timely submitted will be made part of the administrative record.

Finding:

The comments do not identify a new significant environmental impact, a substantial increase in the severity of a previously identified impact, or the need for new or considerably different mitigation measures. Accordingly, recirculation under CEQA Guidelines section 15073.5 is not required, and preparation of an EIR is not warranted.

This section intentionally left blank

Public Comment: **LETTER E** April 7, 2026

Letter of comment for San Jacinto City Council Members regarding the new housing development Chacon Farms Project in San Jacinto, CA.

We have some concerns about the safety of the roads near the Chacon Farms Project, namely Cawston Ave North between Esplane and 7th, and 7th Street between Cawston and Sanderson. The concerns we have are for the safety of both pedestrians and vehicles alike. In our San Jacinto Valley, homes typically have several cars each, so adding 419 homes becomes thousands of cars. Based on the 11th Edition ITEManual Analysis, the Chacon Farms Project is projected to generate roughly 3,952 daily vehicle trips. Having reduced the number of entrance/exits in the project from 3 down to 2 will greatly increase the impact on both Cawston Ave N and 7th Street. **E-1**

Our property is located along Cawston and 7th streets, so we will share the roads with this new development. We have yet to be made aware of what - if any - actual improvements to these streets will be. At the planning commission meeting on March 24, 2026, there were no specific/complete plans available for road improvements. **E-2**

Currently, Cawston Ave N is a narrow street with a temporary sidewalk on the West side and no turning lanes or shoulders for either lane, making it difficult and sometimes dangerous for vehicles to turn into and out of the driveways. This is a "bottleneck" of sorts, as Cawston Ave North of 7th and South of Esplanade is improved with sidewalks, turning lanes and shoulders, appropriate for the homes and schools in the area. **E-3**

7th Street between Sanderson and Cawston is currently improved on the Westbound lane with sidewalks and turning lanes into housing projects. However, the Eastbound lane is narrow and has no turn lanes or shoulders, which makes it difficult and dangerous for vehicles to turn into and out of the driveways. **E-4**

Talley Meadows Layups and Retirement, our busy working horse ranch for the past 10 years, has several gated entrances along Cawston and 7th streets. While we understand the need for development in our community, we feel it is imperative to widen and improve Cawston Ave between Esplanade and 7th, and 7th street between Cawston and Sanderson for the safety and wellbeing of school children, families and those traveling in vehicles. **E-5**

Thank you for your thoughtful consideration of our concerns,

Joe and Christy Talley

Responses To Letter E

Joe and Christy Talley – Talley Meadows Layups and Retirement, April 7, 2026

Comment E-1:

The commenters express concern about pedestrian and vehicular safety on Cawston Avenue North between Esplanade and 7th Street, and on 7th Street between Cawston and Sanderson, in connection with the addition of 419 homes and the Project's projected generation of approximately 3,952 daily vehicle trips (11th Edition ITE Manual Analysis). The commenters note that the reduction of project entrance/exits from three to two will concentrate traffic impact on Cawston Avenue North and 7th Street.

Response E-1:

The City acknowledges the commenters' safety concerns and the Project's projected trip generation. The Transportation Impact Analysis prepared for the Project (appended to the Draft IS/MND) evaluates the Project's projected trip generation, the operational performance of study intersections and roadway segments under existing, opening-year, and cumulative conditions, and the adequacy of Project access. The analysis confirms that, with implementation of the required off-site improvements identified in the Conditions of Approval, all study intersections and roadway segments will operate at acceptable levels of service consistent with City standards, and the consolidation of Project access points does not create a new or substantially more severe traffic safety hazard than the conditions analyzed in the Draft IS/MND. The Draft IS/MND analysis of transportation impacts (Section 4.17) is supported by substantial evidence.

Comment E-2:

The commenters state that they have not been made aware of what, if any, actual improvements to Cawston Avenue and 7th Street will be required, and that at the Planning Commission meeting on March 24, 2026, there were no specific or complete plans available for road improvements.

Response E-2:

The City respectfully clarifies the nature of the entitlement-stage record. The Tentative Tract Map No. 39076 reviewed by the Planning Commission on March 24, 2026 included street cross-sections and frontage exhibits for Cawston Avenue, 7th Street, and Esplanade Avenue. The Draft IS/MND described the required off-site frontage improvements in narrative form, and the Transportation Impact Analysis appended to the Draft IS/MND analyzed the trip generation, intersection operations, and roadway conditions associated with the Project. Together, these constitute the level of project definition required for CEQA review and for the entitlement decisions before the Planning Commission. Construction-level improvement plans (signing and striping plans, structural sections, joint details, and similar) are submitted to and approved by the City Engineer at a later stage of the development process — specifically, prior to recordation of the Final Map (Conditions of Approval Nos. 13 and 24) — and are not required at the entitlement stage.

Importantly, the Conditions of Approval adopted by the Planning Commission establish the off-site frontage improvements as binding requirements of Project approval, as set forth in Response E-3 below.

Comment E-3:

The commenters state that Cawston Avenue North is currently a narrow street with a temporary sidewalk on the west side and no turning lanes or shoulders, making it difficult and sometimes dangerous for vehicles to turn into and out of driveways. The commenters describe this as a "bottleneck," given that Cawston Avenue north of 7th Street and south of Esplanade is improved with sidewalks, turning lanes, and shoulders.

Response E-3:

The City acknowledges the existing condition of Cawston Avenue along the Project's easterly frontage. The Conditions of Approval adopted by the Planning Commission on March 24, 2026 require the developer to construct the following frontage improvements along Cawston Avenue prior to issuance of the Phase 1 Certificate of Occupancy — i.e., before any resident may occupy a home in the Project:

- Dedication of an additional 20 feet of right-of-way to provide a 50-foot wide halfwidth right-of-way consistent with the City's Major roadway classification (Condition of Approval No. 9);
- Asphalt paving (Traffic Index 9.0, PG 70-10);
- 8-inch curb and gutter located 32 feet west of centerline;
- A Class II Buffered Bike Lane consistent with the City of San Jacinto Trails Master Plan;
- An 18-foot wide parkway with landscaping;
- A 6-foot wide concrete sidewalk; and
- Streetlights subject to photometric analysis per City of San Jacinto, County of Riverside, and Caltrans standards (Condition of Approval No. 86).

These improvements will widen and improve Cawston Avenue along the Project's frontage to the City's Major roadway standard, replacing the existing narrow cross-section with a permanent improved sidewalk, dedicated bike facility, landscaped parkway, curb and gutter, and a wider travel section that accommodates the addition of a Project-side travel lane. The improvements directly address the bottleneck condition identified by the commenters and bring the Cawston Avenue frontage into conformance with the improved sections of Cawston Avenue north of 7th Street and south of Esplanade Avenue. In addition, Condition of Approval No. 115 requires installation of a traffic signal at the intersection of Cawston Avenue and Cottonwood Avenue, and Conditions Nos. 79 and 108 require payment of the City's Traffic Signal Mitigation Fees and the Transportation Uniform Mitigation Fee (TUMF), which fund area-wide circulation improvements.

Comment E-4:

The commenters state that 7th Street between Cawston and Sanderson is currently improved

on the westbound lane with sidewalks and turning lanes, but that the eastbound lane is narrow and has no turn lanes or shoulders, making it difficult and dangerous for vehicles to turn into and out of driveways.

Response E-4:

The City acknowledges the existing condition of 7th Street along the Project's northerly frontage. The Conditions of Approval adopted by the Planning Commission require the developer to construct the following frontage improvements along 7th Street prior to issuance of the Phase 1 Certificate of Occupancy:

- Dedication of an additional 20 feet of right-of-way to provide a 50-foot wide halfwidth right-of-way consistent with the City's Major roadway classification (Condition of Approval No. 8);
- Asphalt paving (Traffic Index 9.0, PG 70-10);
- 8-inch curb and gutter located 32 feet south of centerline;
- A Class II Buffered Bike Lane consistent with the City of San Jacinto Trails Master Plan;
- An 18-foot wide parkway with landscaping;
- A 6-foot wide concrete sidewalk; and
- Streetlights subject to photometric analysis per City of San Jacinto, County of Riverside, and Caltrans standards (Condition of Approval No. 85).

These improvements will widen and improve the eastbound (south) side of 7th Street along the Project's frontage to the City's Major roadway standard, addressing the asymmetry between the existing improved westbound side and the unimproved eastbound side that the commenters identify. The Project's frontage along 7th Street extends from the northwest corner of the property at Cawston Avenue westward; improvements to segments of 7th Street beyond the Project's frontage are the responsibility of the City and adjoining property owners through future Capital Improvement Program (CIP) projects and frontage improvements associated with future development, and are funded in part through the Project's required TUMF and Traffic Signal Mitigation Fee contributions.

Comment E-5:

The commenters identify Talley Meadows Layups and Retirement as a working horse ranch with several gated entrances along Cawston and 7th Streets, and state that while they understand the need for development, they feel it is imperative to widen and improve Cawston Avenue between Esplanade and 7th Street, and 7th Street between Cawston and Sanderson, for the safety and well-being of school children, families, and other travelers.

Response E-5:

The City appreciates the commenters' acknowledgement of the community's growth needs and their long-standing presence as the operators of Talley Meadows Layups and Retirement. As detailed in Responses E-3 and E-4, the widening and improvement of Cawston Avenue between Esplanade and 7th Street along the Project's frontage, and of 7th Street along the

Project's northerly frontage, are required as binding Conditions of Approval and must be completed before any resident occupies a home in the Project. In addition, the design and approval of the off-site frontage improvements through the City Engineer's review of the construction-level Street Improvement Plans (Conditions Nos. 13 and 24) will ensure that the improvements meet the City's adopted standards for pedestrian safety, vehicular operation, and access to the commenters' existing gated driveways.

Finding:

The comments raise community concerns regarding traffic and pedestrian safety along Cawston Avenue and 7th Street that are addressed through the Project's required off-site frontage improvements (Conditions of Approval Nos. 8, 9, 85, 86, 115) and through the Project's payment of City Traffic Signal Mitigation Fees and TUMF (Conditions Nos. 79, 108). The comments do not identify any new significant environmental impact, do not demonstrate that previously identified impacts would be substantially more severe than disclosed in the Draft IS/MND, and do not require the addition of new or considerably different mitigation measures. Accordingly, recirculation under CEQA Guidelines section 15073.5 is not required.

This section intentionally left blank

LETTER F

April 7, 2026

To the City Council Members of San Jacinto, CA,
Public Comment Regarding Traffic Safety Concerns for the Chacon Farms Project

We, Michael and Emalee Tomoni, owners of Talley Meadows Layups and Retirement, wish to formally express our significant concerns regarding pedestrian and vehicle safety near the proposed Chacon Farms Project.

Our property is located at the intersection of Cawston Avenue and 7th Street, and we will directly share these roads with the new development. Based on the project's projected generation of approximately 3,952 daily vehicle trips (11th Edition ITE Manual Analysis), we anticipate a substantial increase in traffic volume. F-1

We have specific safety concerns regarding the current state of local infrastructure:

Reduced Access: The reduction of project entrance/exits from three to two will concentrate traffic impact on Cawston Avenue North and 7th Street. F-2

Cawston Avenue North (between Esplanade and 7th): This section is currently narrow with a temporary sidewalk on the west side and lacks turning lanes or shoulders. This creates a "bottleneck" and dangerous turning conditions, unlike the improved sections north of 7th and south of Esplanade. F-3

7th Street {between Cawston and Sanderson): The eastbound lane is narrow, with no turn lanes or shoulders, making turns into and out of driveways difficult and unsafe. F-4

Proposed Solution

We feel it is imperative that the City mandates the widening and improvement of Cawston Avenue (between Esplanade and 7th) and 7th Street (between Cawston and Sanderson) before the project's completion. These improvements are vital for the safety and well-being of local school children, families, and all travelers in the area.

We appreciate your thoughtful consideration of these critical safety concerns.

Sincerely,

Michael and Emalee Tomoni

Responses To Letter F

Michael and Emalee Tomoni – Owners, Talley Meadows Layups and Retirement, April 7, 2026

Comment F-1:

The commenters identify themselves as the owners of Talley Meadows Layups and Retirement, located at the intersection of Cawston Avenue and 7th Street, and express significant concerns regarding pedestrian and vehicular safety near the proposed Chacon Farms Project. The commenters reference the Project's projected generation of approximately 3,952 daily vehicle trips (11th Edition ITE Manual Analysis) and anticipate a substantial increase in traffic volume.

Response F-1:

The City acknowledges the commenters' safety concerns and the Project's projected trip generation. The Transportation Impact Analysis prepared for the Project (appended to the Draft IS/MND) evaluates the Project's projected trip generation, the operational performance of study intersections and roadway segments, and the adequacy of Project access. With implementation of the required off-site frontage improvements identified in the Conditions of Approval and described in Response F-3 below, all study intersections and roadway segments will operate at acceptable levels of service consistent with City standards. See also Response E-1, which addresses the same trip generation and operational analysis in greater detail.

Comment F-2:

The commenters identify a concern under the heading "Reduced Access": that the reduction of project entrance/exits from three to two will concentrate traffic impact on Cawston Avenue North and 7th Street.

Response F-2:

The Project's access configuration was analyzed in the Transportation Impact Analysis and was reflected in the Tentative Tract Map No. 39076 reviewed and approved by the Planning Commission on March 24, 2026. The consolidation of Project access points was evaluated for its effect on adjacent intersection operations and roadway segment performance, and the analysis concludes that with the required off-site frontage improvements, the access configuration provides safe and adequate ingress and egress consistent with City standards. The Project's two access points are supported by the widening and improvement of Cawston Avenue and 7th Street along the Project's frontage to the City's Major roadway standard (see Response F-3) and by the installation of a traffic signal at Cawston Avenue and Cottonwood Avenue (Condition of Approval No. 115).

Comment F-3:

The commenters identify a concern under the heading "Cawston Avenue North (between Esplanade and 7th)": that this section is currently narrow with a temporary sidewalk on the west side and lacks turning lanes or shoulders, creating a "bottleneck" and dangerous turning

conditions, unlike the improved sections north of 7th Street and south of Esplanade Avenue.

Response F-3:

The Project's easterly frontage along Cawston Avenue corresponds to the segment between 7th Street and Esplanade Avenue identified by the commenters. The Conditions of Approval adopted by the Planning Commission require the developer to construct the following frontage improvements along Cawston Avenue prior to issuance of the Phase 1 Certificate of Occupancy:

- Dedication of an additional 20 feet of right-of-way to provide a 50-foot wide halfwidth right-of-way (Condition of Approval No. 9);
- Asphalt paving (Traffic Index 9.0, PG 70-10);
- 8-inch curb and gutter located 32 feet west of centerline;
- A Class II Buffered Bike Lane consistent with the City of San Jacinto Trails Master Plan;
- An 18-foot wide parkway with landscaping;
- A 6-foot wide concrete sidewalk; and
- Streetlights (Condition of Approval No. 86).

These improvements will widen and improve the Project's Cawston Avenue frontage to the City's Major roadway standard, replacing the existing temporary sidewalk and unimproved cross-section, and bringing this segment into conformance with the improved sections of Cawston Avenue north of 7th Street and south of Esplanade Avenue. The bottleneck condition identified by the commenters is directly addressed by these required improvements. See also Response E-3.

Comment F-4:

The commenters identify a concern under the heading "7th Street (between Cawston and Sanderson)": that the eastbound lane is narrow, with no turn lanes or shoulders, making turns into and out of driveways difficult and unsafe. Under the heading "Proposed Solution," the commenters state that it is imperative the City mandates the widening and improvement of Cawston Avenue between Esplanade and 7th Street, and 7th Street between Cawston and Sanderson, before the Project's completion.

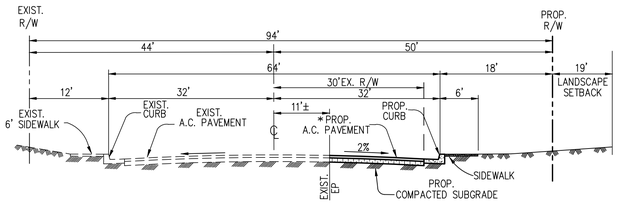
Response F-4:

The Project's northerly frontage along 7th Street corresponds to the western portion of the segment between Cawston and Sanderson identified by the commenters. The Conditions of Approval require the developer to construct the following frontage improvements along 7th Street prior to issuance of the Phase 1 Certificate of Occupancy:

- Dedication of an additional 20 feet of right-of-way to provide a 50-foot wide halfwidth right-of-way (Condition of Approval No. 8);
- Asphalt paving (Traffic Index 9.0, PG 70-10);

- 8-inch curb and gutter located 32 feet south of centerline;
- A Class II Buffered Bike Lane consistent with the City of San Jacinto Trails Master Plan;
- An 18-foot wide parkway with landscaping;
- A 6-foot wide concrete sidewalk; and
- Streetlights (Condition of Approval No. 85).

These improvements will widen and improve the eastbound (south) side of 7th Street along the Project's frontage, addressing the asymmetry between the existing improved westbound side and the unimproved eastbound side identified by the commenters. Improvements to segments of 7th Street beyond the Project's frontage are the responsibility of the City and adjoining property owners through future Capital Improvement Program (CIP) projects and frontage improvements associated with future development; the Project contributes to area-wide circulation improvements through payment of the Transportation Uniform Mitigation Fee (TUMF) and the City's Traffic Signal Mitigation Fee (Conditions of Approval Nos. 79 and 108). With respect to the commenters' proposed solution, the widening and improvement of the Project's Cawston Avenue and 7th Street frontages must be completed prior to issuance of the Phase 1 Certificate of Occupancy — that is, before any resident may occupy a home in the Project — which directly satisfies the timing the commenters request. See also Response E-4 and Response E-5.



Finding:

The comments raise concerns regarding traffic and pedestrian safety along Cawston Avenue and 7th Street that are addressed through the Project's required off-site frontage improvements (Conditions of Approval Nos. 8, 9, 85, 86, 115) and through the Project's payment of City Traffic Signal Mitigation Fees and TUMF (Conditions Nos. 79, 108). The comments do not identify any new significant environmental impact, do not demonstrate that previously identified impacts would be substantially more severe than disclosed in the Draft IS/MND, and do not require the addition of new or considerably different mitigation measures. Accordingly, recirculation under CEQA Guidelines section 15073.5 is not required.

March 24, 2026

TO: Planning Commission

REQUESTED BY: Travis Randel, Deputy City Manager, Development Services

APPROVED BY: Robert A. Johnson, City Manager

SUBJECT: Chacon Farms (PROJ23-0029)

RECOMMENDATION:

That the Planning Commission **Adopt** PC Resolution No. 26-01, thereby recommending that the City Council:

1. **DETERMINE** that the proposed Project will not have a significant effect on the environment with the incorporation of mitigation based on the findings set forth in the case record and **ADOPT** a Mitigated Negative Declaration (MND) and Mitigation Monitoring and Reporting Program, pursuant to the California Environmental Quality Act (CEQA); and

2. **APPROVE** the General Plan Amendment to change the land use designation from Very Low Density Residential (VLDR) to Low Density Residential (LDR);

3. **APPROVE** the Change of Zone from Rural Residential (RR) to Residential Low Density;

4. **APPROVE** the Chacon Farms Planned Development Permit; and

5. **APPROVE** Tentative Tract Map (TTM) 39076 to subdivide 73.97-net acres, into 419 single-family lots for the ultimate construction of 419 single-family detached residences, and to create lettered lots for onsite roadways, a detention basin, parks, and on-site landscape subject to the Recommended Conditions of Approval (PROJ23-0029).

DISCUSSION:

The project is a proposal by Taylor and Clark Consulting on behalf of Richard Michael and Ramona Dairy, LLC, to establish a master-planned residential development consisting of 419 homes as well as the construction of onsite roadways, a detention basin, parks, and on-site landscaping on 73.97-net acres. To facilitate the development, the applicant submitted a General Plan Amendment (GPA), Change of Zone (CZ), Tentative Tract Map (TTM) and Planned Development Permit (PDP), for review and approval. Because the GPA, CZ, and PDP require City Council approval, the Planning Commission is being asked to provide a recommendation to the City Council.

COPY

The Project site is located west of Cawston Avenue, extending between Seventh Street and Esplanade Avenue. The project site is currently occupied by Chacon Farms and Bruno Ranches agricultural operations. Two single-family residential uses occupied by caretakers are also located on site. The project site is surrounded by residential uses to the north and east, residential and agricultural uses to the west, and a dairy farm to the south. The General Plan Land Use Designation is Very Low Density Residential, and the current Zone is Rural Residential.

	Land Use	General Plan Designation	Current Zoning
Project Site	**Agricultural**	**VLDR – Very Low Density Residential**	**RR – Rural Residential**
North	Residential	LDR – Low Density Residential	RL – Residential, Low Density
South	Dairy Farm	NC – Neighborhood Commercial MDR – Medium Density Residential (City of Hemet)	A-2 – Heavy Agriculture (City of Hemet)
East	Residential	VLDR – Very Low Density Residential	RR–Rural Residential
West	Residential/Vacant	Specific Plan	Specific Plan

ANALYSIS:

The intent of the Very Low Density Residential (VLDR) General Plan Land Use Designation and Rural Residential (RR) Zone is to provide for the development of single-family dwellings at a density of up to 2 dwelling units per gross acre of land. This designation is generally most suitable in rural areas, locations where scenic and natural resources should be protected, in areas that consist of small agricultural operations, or where natural hazards limit development potential (such as hillsides). With a maximum density of 2 units per acre the property would be allowed to develop 158 units. However, the developer desires to create a product with smaller lots and more units than would be allowed in the existing designations and therefore a General Plan Amendment and Zone Change are proposed

General Plan and Change of Zone

The project proposes to change the General Plan Land Use Designation to Low Density Residential (LDR) and the Zone to Residential, Low Density (RL). Like the VLDR and RR designations, the proposed land use and zone provide for the development of detached single-family dwellings, however the LDR and RL designations would allow the property to be developed at a higher density with a range between 2 and 7 dwelling units per gross acre and thus allow more units.

COPY

As noted in the table above, the area directly north of the project site is designated LDR and RL and have been developed with single family homes above 2 units to the acre. Furthermore, the area directly west of the site is governed by the Esplanade Specific Plan, which allows a maximum density of 4.5 units to the acre. Development within the Specific Plan is currently underway with densities also above 2 units per acre. Given the development patterns that exists north and west of the project site, the proposed General Plan Amendment and Zone Change provide for a logical and orderly development pattern, with the extension of single-family residences at a higher density consistent with the LDR and RL designations.

Tentative Tract Map

The project proposes to subdivide 3 parcels into single family lots. Therefore, the project includes TTM 39076 to create 419 single-family lots with a density of 5.53 dwelling units per acre. The subdivision is proposed to be recorded in two phases which will include 235 lots in Phase 1 and 184 lots in Phase 2. The proposed lots range in size between 3,700 to 7,900 square feet. In addition, the subdivision includes lettered lots for the construction of onsite roadways, detention basins, parks, and on-site landscaping.

Access and Circulation

Two points of vehicular access will be provided to the development, which includes a single new 80-foot-wide (40' curb to curb) east-west oriented roadway from Cawston Avenue, which borders the development to the east, and a new 56-foot-wide (36' curb to curb) north-south oriented roadway that connects to Seventh Street which borders the project to the north. These two proposed entrance roadways lead to a network of 52-foot-wide (36' curb to curb) internal streets within the tract that ensure appropriate access to every facet of the development, including all homes, parks and basins. The new roads will be private streets that include curb, gutter, sidewalks and streetlights. Because the roads are proposed as private streets, they will be maintained by a Homeowners Association (HOA). Pedestrian access is also provided via proposed sidewalks on both sides of the new streets mentioned above as well as a new pedestrian entrance from Esplanade Avenue through a proposed paseo.

In addition to internal streets the developer will also be conditioned to improve Cawston Avenue and Seventh Street, which are adjacent to the site. For Cawston Avenue and Seventh Street the developer will be required to dedicate 20 feet of right-of-way and widen the existing roadway with additional asphalt paving. In addition, the project will be conditioned to install curb, gutter, sidewalk, streetlights and 18 feet of parkway with landscaping.

Frontage improvements along Esplanade Avenue, which borders the project site to the south, will be constructed as part of the City's adopted Capital Improvement Program (CIP), which includes the widening of Esplanade Avenue from Warren Road to Sanderson Avenue. Accordingly, the Developer will not be required to construct the roadway frontage improvements along Esplanade.

COPY

This approach is consistent with the City's long-standing plan to deliver these improvements as a single coordinated CIP project and avoids the inefficiencies and potential conflicts associated with having multiple contractors operating within the same right-of-way at the same time.

While the roadway widening is primarily funded through the Transportation Uniform Mitigation Fee (TUMF) program, TUMF funding is limited to capacity-related improvements and does not include street lighting. As such, the Developer remains responsible for the installation of streetlights along the project frontage.

To ensure compatibility with the City's ongoing construction, the Developer shall coordinate with the City and its contractor to incorporate the necessary provisions into the CIP project to allow for the future installation of streetlights and related improvements without requiring disturbance of the newly constructed roadway. The Developer shall also coordinate with the City regarding frontage landscaping.

To ensure that intersections will operate at acceptable levels with the additional traffic created, traffic signals will be required at the intersection of Cawston Avenue and Esplanade Avenue, Cawston Avenue and Seventh Street, and Cawston Avenue and Cottonwood Avenue. However, the intersection at Cawston and Esplanade will be completed as part of the CIP project and therefore it is not a required condition of approval. Along with the installation of these traffic signals, additional signing and stripping improvements to accommodate vehicular travel lanes and pedestrian crossings will be required.

Planned Development Permit (PDP)
To support the ultimate development of the proposed subdivision, the applicant has submitted a Planned Development Permit (PDP). The purpose of the PDP is to promote the efficient use of land, ensure a high-quality residential environment, uphold strong environmental design standards, and provide enhanced amenities that contribute to the creation of a well-planned community. In addition to the proposed single-family homes, Chacon Farms also includes four active parks and amenities that will feature pickle ball courts, shade structures, picnic tables, BBQs, and multiple play structures. The project also includes a network of new street improvements as well as utilities, and drainage infrastructure to serve the development.

The PDP establishes the design and minimum development standards for the future buildout of Chacon Farms. The proposed residential units would include 4 to 5 bedrooms, 2 to 4 bathrooms, and optional loft spaces available within specific floor plans. The homes would range in size from approximately 1,758 to 3,025 square feet, providing a variety of housing options capable of meeting the needs of different household types and lifestyles. All homes would include two-car garages as well as driveways designed to accommodate an additional two vehicles, ensuring adequate on-site parking. To further reduce parking impacts within the neighborhood, the internal street system has been designed to allow on-street parking on one side, thereby providing convenient and accessible guest parking while maintaining clear travel lanes and emergency access.

COPY

The Preliminary Development Plan (PDP) provides comprehensive guidelines for architectural design, color schemes, and materials intended to establish a cohesive, rural-inspired character. For the purposes of this PDP, an agrarian architecture theme is achieved through simple building forms, varied one- and two-story massing, pitched rooflines, and the use of natural materials such as muted stucco and stone veneer, complemented by architectural details including siding, shutters, and covered entries typical of farmhouse-style development.

The guidelines address architectural styles, color palettes, exterior materials, and elevations treatments. The architectural styles include Spanish, Prairie, and Farmhouse for the future 419 dwelling units, accompanied by nine (9) color schemes. The incorporation of multiple styles and color options is intended to enhance visual interest while maintaining a unified aesthetic throughout the subdivision. In addition, the PDP proposes five (5) distinct floor plans, each offering five (5) elevation types. This range of design options ensures that homes will not appear repetitive and ensures identical or highly similar elevations being placed adjacent to or directly across from one another. The added variety and enhanced architectural features and variation of product types provided within the Chacon Farms development will ensure that the development is cohesive and unique while providing greater architectural interest throughout the development.

In addition to the 419 lots, the proposed PDP includes one basin/park located at the northwest corner of the community, a central park located at the center of the community, two smaller neighborhood parks located to the south, and paseos throughout the site totaling approximately 3.26-acres. All parks, roadways, and basins will be maintained by the HOA. The following is a complete list of amenities within the park areas:

A. Basin Park
- Shade Structure with Picnic Tables (six tables)
- Seating area with Picking Tables (five locations)
- Benches
- Turf / Open Space
- Pickleball Court

Lastly, the Planned Development includes landscape design guidelines and wall standards that provide additional details that enhance the project. Those details include enhanced entrances with accent trees, outdoor play equipment, stone veneer pilasters at corners, split face block walls with decorative caps that will be enhanced with vines and landscaping with an expansive list of Street Trees and shrubs to provide additional variety and interest.

Development Schedule and Phasing Plan

Construction activities for the Project would occur over four construction phases lasting approximately 5 years, with final engineering completed in 2026 and final closing in 2031. Construction would occur as follows: (1) final engineering; (2) grading and site preparation; (3) home construction; (4) final closing. Construction activities would be limited to the hours between 7:00 a.m. and 7:00 p.m. on weekdays and Saturdays, and between 9:00 a.m. and 6:00 p.m. on Sundays and holidays pursuant to the City's Municipal Code Chapter 8.40.090.

The proposed product types, enhanced architectural standards, and park provides for a better living environment with higher standards found in conventional developments.

Modified Designed Standards

To meet the project objectives that provide for this future development, the PDP proposes to modify several development standards of the Residential, Low Density (RL) zone. The table below identifies the RL Development Standards and the proposed Development Standards of the PDP. Items that are underlined are standards that would be modified.

Development Feature	RL Zone Development Code	Proposed	Proposed Modification
Density	2.1-7.0 DU/AC	5.53 DU/AC	No
Parcel Area (Net)	5,000 sq. ft.	3,717 sq. ft.	**Yes**
Parcel Width Interior	50 ft.	45 ft.	**Yes**
Parcel Width Corner	70 ft	25 ft.	**Yes**
Parcel Depth	100 ft.	60 ft.	**Yes**
Setback Front of Building	20 ft.	10 ft.	**Yes**
Setback to Front of Garage	N/A	20 ft.	N/A
Setback (Interior)	5 ft.	4 ft.	**Yes**

COPY

Setback Street Side	10 ft.	5 ft.	**Yes**
Setback Rear	20 ft.	10 ft.	**Yes**
Rear with Slope	20 ft.	10 ft.	**Yes**
Lot Coverage – Structure	55%	60%	**Yes**
Primary Structure Height	35 ft.	35 ft.	No

The proposed Planned Development Permit (PDP) includes modifications to certain development standards of the Residential, Low Density (RL) zone to facilitate a cohesive and efficient site design. These modifications primarily include reductions in minimum lot size, lot dimensions, and setbacks, along with a modest increase in allowable lot coverage. The resulting project achieves a density of 5.53 dwelling units per acre, which remains within the permitted range of the Low Density Residential (LDR) designation (2.1 to 7.0 dwelling units per acre).

The proposed modifications are consistent with the intent of the General Plan and reflect development patterns in the surrounding area, including nearby neighborhoods to the north and west that have been developed at similar densities and with comparable lot configurations. As such, the project does not introduce an intensity or scale that would be incompatible with adjacent uses and represents a logical continuation of existing residential development in the vicinity.

In addition to consistency with surrounding development, the PDP incorporates objective design standards and site planning features that ensure a high-quality residential environment. The project includes a typical plotting plan demonstrating that functional single-family homes can be constructed on the proposed lots in compliance with applicable building and fire code requirements, confirming that the modified standards result in practical and buildable lot configurations.

The PDP further enhances the quality of the development through a range of site design features and amenities, including:

- A dual park and basin feature that provides both recreational space and functional stormwater infrastructure;
- Play equipment and design elements that reflect the agricultural character of the surrounding area;
- A coordinated landscape palette that complements the architectural styles and enhances neighborhood identity;
- Decorative perimeter walls with stone veneer pilasters, enhanced with landscaping and vines;
- A tubular steel fence with split-face block pilasters at the water quality basin;
- An enhanced entry feature along Cawston Avenue with accent landscaping and 24-inch box trees;
- A paseo connection to Esplanade Avenue providing pedestrian access to and from the community;

COPY

- Architectural design standards that exceed minimum Development Code requirements, including five floor plans with multiple elevation types and varied materials such as siding, brick and stone veneer, clay tile elements, and enhanced window treatments.

Collectively, these features demonstrate that the requested modifications are balanced by a comprehensive and thoughtfully designed project. The flexibility provided through the Planned Development Permit results in a development that is both consistent with applicable land use policies and superior in overall design quality, consistent with the purpose and intent of the PDP process.

ENVIRONMENTAL ASSESSMENT:
The project has been reviewed in accordance with the California Environmental Quality Act ("CEQA") and the State CEQA guidelines. An Initial Study was prepared for the project to determine the potential environmental impacts of the project. The Initial Study concluded that with applied mitigation the Project would not result in a significant effect on the environment. The project includes mitigation measures related to Biological Resources, Cultural Resources, Geology and Soils, Hazards and Hazardous Materials, Noise, and Tribal Cultural Resources. Therefore, staff determined that a Mitigated Negative Declaration (MND) was the appropriate CEQA document in support of the Project.

The Initial Study and Mitigated Negative Declaration (IS/MND) was circulated for a 30-day public comment period via the publication of a Notice of Intent on October 28, 2025. In addition to the publication, the IS/MND was submitted to the State Clearing House for posting (SCH No. 2025101241). Three comments were received.

Department of Toxic Substances (DTSC)
The first comment letter was issued by the Department of Toxic Substances Control (DTSC), outlining DTSC's recommendations regarding potential contaminants of concern (COCs). As part of the MND a Phase 1 Environmental Site Assessment (ESA) was prepared, which did not identify recognized environmental conditions (RECs) requiring immediate subsurface investigation. Additional soil sampling was also conducted, and no pesticides or heavy metals were detected in the shallow soil samples.

Department of Conservation
The second letter was issued by the Department of Conservation, providing advisory comments regarding the project's potential conversion of Important Farmland. This concern was evaluated in the Agriculture and Forestry Resources as part of the City General Plan Environmental Impact Report (EIR). The agricultural resource impacts associated with converting Important Farmland within the Planning Area, including the infeasibility of preservation-based mitigation, were fully evaluated and disclosed in the General Plan 2040 EIR.

COPY

The proposed project does not introduce new agricultural impacts or increase the severity of those identified in the certified EIR. In addition, to evaluate site-specific agricultural viability, a California Agricultural Land Evaluation and Site Assessment (LESA) Model analysis was conducted. The LESA Model, developed by the California Department of Conservation (DOC), is an optional quantitative tool available to lead agencies under CEQA for determining the significance of farmland conversion. While the project converts existing agricultural land, these impacts were fully analyzed in the General Plan EIR and are not new or more severe than previously disclosed.

Talley Meadows Ranch

The third and final comment letter was submitted by Talley Meadows Ranch, outlining concerns about traffic safety and pedestrian hazards on Cawston Avenue along the project frontage. These concerns have been acknowledged; however, the comments do not identify deficiencies in the adequacy of the CEQA document. Issues related to the safety and functional design of the street frontage will be addressed through the Tentative Tract Map No. 39076 engineering review and approval process, which ensures that all frontage improvements and design details comply with the City's requirements and standards.

The mitigation measures required to reduce or mitigate the impacts of this Project on the environment are included in the Initial Study and will be made enforceable through the Mitigation Monitoring and Reporting Program ("MMRP") and the Conditions of Approval for the Project.

Notice of Public Hearing

The public hearing for this Project was originally noticed on or before January 17, 2026, for a January 27, 2026, hearing, including mailed notice to property owners within 300 feet of the project site. The January 27, 2026, hearing was subsequently adjourned, and all items were continued to February 24, 2026. On February 19, 2026, the applicant requested a continuance to the March 24, 2026, meeting to allow time to address outstanding items related to the conditions of approval.

Out of an abundance of caution, the Project was re-noticed on or before March 13, 20`26, for the March 24, 2026 hearing, including mailed notice to property owners within 300 feet of the project site. As of the preparation of this report, no additional correspondence or comments have been received.

COPY

CONCLUSION

The proposed General Plan Amendment and Change of Zone establish a land use framework that is internally consistent with the General Plan and supports the orderly development of the project site. As outlined in the Findings of Fact, the project furthers multiple General Plan goals and policies related to housing, land use compatibility, circulation, and community design, while contributing to the City's Regional Housing Needs Allocation (RHNA) and providing a range of housing opportunities.

The proposed Tentative Tract Map and Planned Development Permit implement this framework through a cohesive subdivision design, appropriate infrastructure and circulation improvements, and a comprehensive set of architectural standards and site enhancements. The requested modifications to development standards are consistent with the intent of the Planned Development Permit process and are balanced by high-quality design features, integrated open space, and neighborhood amenities that ensure compatibility with surrounding uses and the creation of a well-planned residential community. As further supported by the Findings, the site is physically suitable for the proposed development, and adequate public services and infrastructure are available or will be provided to serve the project.

Additionally, to ensure consistency with development standards and enhance the overall project design, the applicant will be required to submit a revised plot plan prior to City Council clearly illustrating all required setbacks as measured from the property lines, including a minimum setback of no less than twenty (20) feet from the property line to the garage. The applicant will also identify any rear elevations that face the public right-of-way and demonstrate how those elevations will be architecturally enhanced to maintain visual quality and compatibility with the surrounding area.

The environmental analysis prepared for the project determined that, with incorporation of mitigation measures, all potential impacts can be reduced to a less-than-significant level. Adoption of the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program will ensure that these measures are implemented.

Based on the foregoing and the detailed Findings of Fact attached, staff recommends that the Planning Commission adopt a resolution recommending that the City Council: (1) adopt the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program pursuant to CEQA; and (2) approve the General Plan Amendment, Change of Zone, Planned Development Permit, and Tentative Tract Map No. 39076, subject to the Conditions of Approval.

As the General Plan Amendment, Change of Zone, and Planned Development Permit require City Council approval, the Planning Commission's action on this item is a recommendation only. Final action on the Project will be taken by the City Council.

The Planning Commission's recommendation is subject to appeal in accordance with Chapter 17.715 (Appeals) of the Development Code.

STATE OF CALIFORNIA)
COUNTY OF RIVERSIDE)
CITY OF SAN JACINTO)

PC RESOLUTION NO. 26-01

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF SAN JACINTO RECOMMENDING THAT THE CITY COUNCIL ADOPT A MITIGATED NEGATIVE DECLARATION AND MITIGATION MONITORING AND REPORTING PROGRAM, AND APPROVE A GENERAL PLAN AMENDMENT, CHANGE OF ZONE, PLANNED DEVELOPMENT PERMIT, AND TENTATIVE TRACT MAP 39076 (PROJ23-0029)

WHEREAS, the applicant, Chacon Farms, submitted applications for a General Plan Amendment, Change of Zone, Planned Development Permit, and Tentative Tract Map 39076 to subdivide approximately 73.97 net acres into 419 single-family residential lots, along with lettered lots for internal roadways, a detention basin, parks, and landscape areas, located between 7th Street to the north, Esplanade Avenue to the south, and west of Cawston Avenue (Project); and

WHEREAS, the City, as Lead Agency, prepared an Initial Study in accordance with the California Environmental Quality Act (CEQA) and determined that, with the incorporation of mitigation measures, the Project will not have a significant effect on the environment, and a Mitigated Negative Declaration (MND) and Mitigation Monitoring and Reporting Program (MMRP) were prepared for the Project; and

WHEREAS, the Planning Commission has reviewed and considered the Initial Study, Mitigated Negative Declaration, and Mitigation Monitoring and Reporting Program, together with all comments received thereon, and finds that the MND reflects the independent judgment of the City; and

WHEREAS, on March 24, 2026, the Planning Commission conducted a duly noticed public hearing on the Project, at which time all interested persons were given the opportunity to be heard and the Project was fully considered; and

WHEREAS, the Planning Commission has considered the entire record of proceedings, including the staff report, technical studies, public testimony, and all other evidence presented.

NOW, THEREFORE, BE IT RESOLVED BY THE PLANNING COMMISSION OF THE CITY OF SAN JACINTO:

Section 1. Recitals. The foregoing recitals are true and correct and are incorporated herein by reference.

COPY

Attachment: PC Resolution 26-01 (Chacon Farms (PROJ23-0029))

Section 2. Environmental Determination. Based upon the whole of the record before it, including the Initial Study and all supporting information, the Planning Commission finds that:

A. The Mitigated Negative Declaration has been prepared in compliance with the California Environmental Quality Act (CEQA);

B. The Mitigated Negative Declaration reflects the independent judgment of the City;

C. There is no substantial evidence, in light of the whole record, that the Project, as mitigated, will have a significant effect on the environment; and

D. The mitigation measures identified in the Mitigated Negative Declaration are hereby adopted and shall be implemented through the Mitigation Monitoring and Reporting Program.

Section 3. Findings. Based upon the entire record, including all written and oral evidence presented, and the findings set forth in the staff report and incorporated herein by reference, the Planning Commission finds that:

A. The Project is consistent with the General Plan and all applicable provisions of the Municipal Code;

B. The Tentative Tract Map is consistent with the Subdivision Map Act and the City's Development Code, and the site is physically suitable for the type and density of development proposed;

C. The Project satisfies all applicable findings required for approval of the General Plan Amendment, Change of Zone, Planned Development Permit, and Tentative Tract Map; and

D. The Project will not be detrimental to the public interest, health, safety, convenience, or welfare of the City.

Section 4. Recommendation of Approval. Based upon the foregoing, the Planning Commission hereby recommends that the City Council:

A. Adopt the Mitigated Negative Declaration for the Project and adopt and implement the Mitigation Monitoring and Reporting Program;

B. Approve a General Plan Amendment to change the land use designation from Very Low Density Residential (VLDR) to Low Density Residential (LDR);

C. Approve a Change of Zone from Rural Residential (RR) to Residential Low Density (RL);

D. Approve a Planned Development Permit to allow modifications to the Residential Low Density (RL) development standards, subject to the Conditions of Approval attached hereto as Exhibit A and incorporated herein by reference;

COPY

E. Approve Tentative Tract Map No. 39076 to subdivide approximately 73.97 net acres into 419 single-family residential lots and associated lettered lots for roadways, drainage, parks, and landscape areas, subject to the Conditions of Approval attached hereto as Exhibit A and incorporated herein by reference; and,

F. Direct staff to file a Notice of Determination in accordance with the California Environmental Quality Act.

Section 5. Record of proceedings. The documents and materials that constitute the record of proceedings upon which this Resolution is based are located at the City of San Jacinto, 595 South San Jacinto Avenue, San Jacinto, California 92583. The custodian of the record is the Community Development Department. This information is provided pursuant to Public Resources Code Section 21081.6.

Section 6. Recommendation to city council. As the Project includes a General Plan Amendment, Change of Zone, and Planned Development Permit, final action on the Project rests with the City Council. The Planning Commission's action on this item constitutes a recommendation to the City Council.

PASSED, APPROVED, AND ADOPTED at a regular meeting of the Planning Commission on the 24th day of March 2026 by the following vote:

FINDINGS OF FACTS
Chacon Farms Residential Development

GENERAL PLAN AMENDMENT FINDINGS:

1. **The amendment is internally consistent with all other provisions of the General Plan and any applicable specific plan;**

   The proposed General Plan Amendment from VLDR (Very Low Density Residential) to LDR (Low Density Residential) will further the intent of the General Plan by providing a variety of new housing opportunities that will complement surrounding uses of primarily residential developments. Specifically the General Plan Amendment will continue to allow the development of residences on the project site with a density range of 2.1 to 7 dwelling units to the acre in lieu of the current density range of 0-2 dwelling units to the acre with the VLDR designation. With proposed General Plan Amendment, the proposed project will conform with the goals and policies of the General Plan, including the applicable goals and policies of the Land Use Element and Housing Element, as detailed below:

   Land Use Goal 1: A community with a land use plan that accommodates a mix of uses to meet current and future needs.
   Specifically implementing policy 1.3 & 1.6

   - The Project supports Policy LU-1.3 by increasing the City's housing supply within an established growth area and contributing toward the City's Regional Housing Needs Allocation (RHNA). The Project includes 419 single-family residential units within the allowable density range of the Low Density Residential designation, helping to meet current and future housing needs.

   - The Project is consistent with Policy LU-1.6 through the incorporation of multiple neighborhood parks, open space areas, and an interconnected system of pedestrian paseos. These features provide accessible recreational opportunities and functional gathering spaces for future residents.

   Land Use Goal 2: A City that manages and directs growth so that the community and its neighborhoods are protected and enhanced.
   Specifically implementing policy 2.1 & 2.2

   - The Project supports Policies LU-2.1 and LU-2.2 by promoting an orderly and coordinated pattern of development that is compatible with surrounding residential uses. The Project site is adjacent to existing and

COPY

Attachment: Findings of Facts (Chacon Farms (PROJ23-0029))

planned residential neighborhoods and proposes a density that is consistent with the Low Density Residential designation.

- The Project includes an interconnected circulation network designed to improve internal connectivity, provide efficient vehicular and pedestrian access, and enhance access to on-site open space and neighborhood amenities. The Project also provides connectivity to the Class I multi-use path along Esplanade Avenue, supporting multimodal access.

- The Project provides a balanced distribution of open space and recreational amenities throughout the site, ensuring that residents have convenient access to neighborhood parks and contributing to the overall quality and livability of the community.

The Project has been reviewed for consistency with applicable infrastructure and service requirements and will coordinate with appropriate service providers, including Eastern Municipal Water District, to ensure adequate utilities and public services are provided.

Based on the foregoing, the proposed General Plan Amendment is internally consistent with the goals, policies, and land use framework of the General Plan and will not create inconsistencies with other provisions of the Plan.

2. The proposed amendment will not be detrimental to the public interest, health, safety, convenience, or welfare of the City;

Public Interest

The proposed project is consistent with the General Plan and serves the public interest by providing a balanced mix of housing and amenities that meet community needs and enhance recreational and social opportunities. The project would contribute 419 residential units toward the Regional Housing Needs Allocation (RHNA), offering a variety of housing types to accommodate diverse ages, incomes, and household needs. The homes are designed with architectural styles that complement the area's rural character. Overall, the development promotes livability through walkability, community engagement, integrated open space, pedestrian safety, and support for an active lifestyle.

Health and Safety

The proposed project is consistent with the General Plan and promotes public health and safety by incorporating a planned layout that emphasizes pedestrian safety and encourages physical activity and well-being. Four community parks, connected by an integrated network of pathways, will provide residents with a range of social and recreational opportunities.

COPY

Convenience

The proposed project conforms with the provision of public convenience according to the General Plan. This development will create an additional 419 homes that are within a convenient distance to surrounding amenities and public infrastructure, including the following:

- *Transit*
  The Project Site is approximately 0.6 miles (a 12-minute walk), from the Riverside Transit Agency (RTA) Go Micro service zone. Go Micro is RTA's on-demand public transit service available within the Hemet-San Jacinto micro transit zone. Shared rides can be booked via the Go Micro app at user convenience, rather than relying on a predetermined bus schedule. Go Micro minibuses directly pick up and drop off passengers at desired locations, at desired times (provided both locations are within the micro transit zone and that the trip does not begin and end at route 44 bus stops).

- *Schools*
  The Project Site is located within the Hemet Unified School District and would likely be served by nearby schools, including Cawston Elementary School (1.3 miles), Rancho Viejo Middle School (0.9 miles), and Tahquitz High School (0.7 miles). The site may also be served by Megan Cope Elementary School (0.7 miles), which is within the San Jacinto Unified School District. In addition, Mt. San Jacinto College is approximately five miles from the Project Site and is directly accessible via RTA's on-demand transit service, Go Micro.

Welfare

The proposed project with the support of the General Plan Amendment and Zoning Map Amendment, will support and promote the general welfare of San Jacinto residents. The proposed project, specifically, will support and promote walkability, community engagement, integrated open space, pedestrian safety, and an active lifestyle. Integrated Community Parks connected by a network of paths will facilitate recreation and socialization.

3. **If an amendment to the Land Use Element, the affected site(s) is physically suitable in terms of design, location, shape, size, operating characteristics, and the provision of public and emergency vehicle (e.g., fire and medical) access and public services and utilities (e.g., fire protection, police protection, potable water, schools, solid waste collection and disposal, storm drainage, wastewater collection, treatment, and disposal, etc.), to ensure that the proposed or anticipated uses and/or development will not endanger, jeopardize, or otherwise constitute a hazard to the property or improvements in the vicinity in which the property is located; and**

COPY

Physical Suitability

The proposed project, with the support of the General Plan Amendment and Zoning Map Amendment, will not endanger, jeopardize, or otherwise constitute hazard to property in the vicinity in which the property is located and will be physically suitable in terms of design, location, shape, size, operating characteristics, and the provision of public emergency vehicle access and public services as follows:

- *Design*
  The Proposed Project is designed to be compatible with the surrounding San Jacinto community and consistent with adjacent residential uses. The development features an interconnected grid of streets that enhances walkability and provides convenient vehicle and pedestrian access to homes, community parks, and recreational amenities distributed throughout the site.

  Residential architecture will include farmhouse, Spanish, and prairie styles, using quality materials such as stucco, brick, and stone, along with a varied but cohesive color palette that complements the broader community and individual streetscapes. These design elements enhance the visual character of the Chacon Farms community.

  The project will not interfere with existing water or sewer easements, as confirmed by the site boundary survey, and will comply with applicable landscaping and setback requirements. The site's north–south orientation supports efficient solar design, with some east–west–oriented homes incorporated where feasible to allow for additional passive solar opportunities.

- *Location*
  The proposed development will complement and enhance surrounding land uses. Existing single-family residential neighborhoods are located to the north, northeast, and northwest across West 7th Street, as well as to the east across Cawston Avenue. To the west, the Esplanade Specific Plan includes approximately 130.7 acres of planned single-family residential development.

- *Shape and Size*
  The project site is generally rectangular in configuration and consists of three smaller rectangular parcels. The proposed project is designed to minimize sprawl and efficiently utilize the approximately 75.70 acres of site area. The site will accommodate 419 single-family homes with a minimum lot size of 3,717 square feet, along with designated open space for parks and a basin.

COPY

- *Operating Characteristics*
  The proposed projects operating characteristics will be consistent with those of surrounding single-family developments. The proposed project will operate as a place of housing, enhanced by various amenities within several community parks, to prospective residents.

- *Public Emergency Vehicle Access*
  The proposed project's inter-connected network of thoroughfares will contribute to emergency vehicle accessibility. The applicant will comply with any easement requirements for public emergency vehicle access. Further, the proposed public emergency vehicle access will be reviewed by City and County Departments including the City's engineering department and Riverside County Fire, to ensure efficiency and safety for future residents.

- *Public Service and Utilities*
  Adequate City infrastructure exists to support the Project. Additionally, the project has been reviewed by Police, Fire, Public Utilities and Engineering to ensure that the design accommodates public and emergency vehicles including solid waste haulers, City crews, and other service providers.

4. **The City may reduce, require, or permit the reduction of, the residential density for any parcel to, or allow development of any parcel at, a lower residential density, as defined in Government Code Section 65863, only if the following two additional findings are first made:**

   a. **The reduction is consistent with the adopted General Plan, including the Housing Element; and**

      The proposed Project does not involve a reduction in residential density. The proposed General Plan Amendment would change the land use designation from Very Low Density Residential (0 to 2 dwelling units per acre) to Low Density Residential (2.1 to 7 dwelling units per acre), thereby allowing for an increase in residential density on the Project site. Accordingly, this finding is not applicable. Notwithstanding, the Project is consistent with the General Plan and Housing Element.

   b. **The remaining sites identified in the Housing Element are adequate to accommodate the jurisdiction's share of the regional housing needs in compliance with Government Code Section 65584.**

      The proposed Project does not reduce residential density and

COPY

therefore does not trigger this finding. Notwithstanding, the Housing Element identifies adequate sites to accommodate the City's remaining Regional Housing Needs Allocation (RHNA), and the Project would increase the City's housing supply and contribute toward meeting its RHNA obligations.

COPY

CHANGE OF ZONE FINDINGS:

1. **Findings required for all Development Code and Zoning Map amendments.**

   a. **The proposed amendment is consistent with the General Plan and any applicable specific plan;**

   The proposed Change of Zone from Rural Residential (RR) to Residential Low Density (RL) is consistent with the General Plan with the adoption of the proposed General Plan Amendment. The RL zoning designation is the implementing zone for the Low Density Residential (LDR) General Plan land use designation and will ensure consistency between the General Plan and Zoning Map. The Project site is not located within a Specific Plan area; therefore, no Specific Plan applies.

   b. **The proposed amendment will not be detrimental to the public interest, health, safety, convenience, or welfare of the City.**

   The proposed Change of Zone will not be detrimental to the public interest, health, safety, convenience, or welfare of the City. The amendment will facilitate the development of a planned residential community that is consistent with the General Plan and Development Code. The Project incorporates an interconnected circulation system, neighborhood parks, and pedestrian amenities that promote walkability and community interaction.

   The Project has been reviewed by applicable City departments and service providers to ensure that adequate infrastructure and public services, including police, fire, utilities, and emergency access, are available to serve the site. As conditioned, the Project will not result in adverse impacts to the surrounding area and will support orderly and coordinated development.

2. **Additional findings for Zoning Map amendments**

   a. **The affected site(s) is physically suitable in terms of design, location, shape, size, operating characteristics, and the provision of public and emergency vehicle (e.g., fire and medical) access and public services and utilities (e.g., fire protection, police protection, potable water, schools, solid waste collection and disposal, storm drainage, wastewater collection, treatment, and disposal, etc.), to ensure that the requested zoning designation and the proposed or anticipated uses and/or development will not endanger, jeopardize, or otherwise constitute a hazard to the property or improvements in the vicinity in which the property is located.**

   The Project site is physically suitable for the proposed Residential Low

COPY

Density (RL) zoning designation in terms of design, location, shape, size, and operating characteristics. The site is of sufficient size and configuration to accommodate the proposed residential development, including internal circulation, open space, and required infrastructure.

The Project is located adjacent to existing and planned residential development and represents a logical extension of the surrounding land use pattern. The proposed street network is designed to provide adequate access for residents, service providers, and emergency response vehicles and will be subject to review and approval by the City's Engineering Department and Riverside County Fire Department.

Adequate public services and utilities are available, or will be provided, to serve the Project, including potable water, wastewater, storm drainage, solid waste services, and schools. The Project has been reviewed by relevant agencies and departments to ensure that the proposed zoning and anticipated development will not endanger or otherwise constitute a hazard to surrounding properties or improvements.

COPY

SUBDIVISION FINDINGS (TTM 39076):

1. **The proposed subdivision of land has been found to be consistent with the Development Code, General Plan, and the San Jacinto Municipal Code.**

   The proposed Tentative Tract Map (TTM 39076) is consistent with the San Jacinto Municipal Code and has been reviewed in accordance with the applicable provisions of Titles 16 and 17. The Project includes a Planned Development Permit to allow limited, controlled modifications to the development standards of the Residential Low Density (RL) zone, which are intended to facilitate a cohesive and well-designed residential community.

   Upon approval of the General Plan Amendment and Change of Zone, the Project will be consistent with the Low Density Residential (LDR) General Plan land use designation and the corresponding RL zoning designation. The proposed subdivision is consistent with the permitted density range and establishes a logical and orderly pattern of residential development.

   The Project implements applicable General Plan goals and policies, including:

   - Land Use Goal 2 and Policies LU-2.1 and LU-2.2, by promoting orderly and coordinated growth that is compatible with surrounding residential neighborhoods and supported by an interconnected circulation network and accessible open space; and

   - Land Use Goal 3 and Policies LU-3.1 and LU-3.2, by facilitating high-quality residential development that is compatible with adjacent land uses and incorporates design features that enhance neighborhood character and connectivity.

   Based on the foregoing, the proposed subdivision is consistent with the Development Code, General Plan, and Municipal Code.

2. **The tentative map does not propose to divide land which is subject to a contract entered into pursuant to the California Land Conservation Act of 1965, or the land is subject to a Land Conservation Act contract but the resulting parcels following division of the land will be of an adequate size to sustain their agricultural use**

   The project site is not subject to a contract pursuant to the California Land Conservation Act of 1965 as detailed in the analysis completed through the Mitigated Negative Declaration document. In addition, the projects title report did not have indication of a Williamson Act Contract.

COPY

3. **The site is physically suitable for the type and proposed density of development proposed by the tentative map.**

   The Project site is physically suitable for the proposed subdivision of 419 single-family residential lots. The proposed use is consistent with the Residential Low Density (RL) zoning designation and the Low Density Residential (LDR) General Plan land use designation, which permits residential development within the proposed density range.

   The site is of sufficient size and configuration to accommodate the proposed subdivision, including residential lots, internal circulation, and open space areas. The Project represents a logical expansion of existing and planned residential development in the surrounding area, including neighborhoods to the north, east, and west.

   The Project site has access to existing and planned infrastructure necessary to support the proposed development, including potable water, wastewater, natural gas, and electrical services, which are available within adjacent roadways. The site is also located in proximity to existing community amenities, including parks and schools, which support the residential character of the Project.

   Based on the foregoing, the site is physically suitable for the type and density of development proposed.

4. **The design of the subdivision and the proposed improvements, with conditions of approval, are either:**

   a. **Not likely to cause significant environmental damage or substantially and avoidably injure fish or wildlife or their habitat; or**

      An Initial Study was prepared for the Project in accordance with the California Environmental Quality Act (CEQA) to evaluate potential environmental impacts. The Initial Study determined that, with the incorporation of mitigation measures, the Project will not have a significant effect on the environment, including impacts to biological resources such as fish and wildlife and their habitat.

      All mitigation measures identified in the Initial Study have been incorporated into the Project and will be implemented through the Mitigation Monitoring and Reporting Program. Accordingly, the design of the subdivision and proposed improvements is not likely to cause significant environmental damage or substantially and avoidably injure fish or wildlife or their habitat.

COPY

b. **An environmental impact report under which a finding has been made pursuant to Public Resources Code Section 21081(a)(3) that specific economic, social, or other considerations make infeasible mitigation measures or project alternatives identified in the environmental impact report.**

The project's impacts were not significant enough to require the preparation of an environmental impact report. A Mitigated Negative Declaration was prepared for the Project to assess any significant environmental impacts, and it was determined that a Mitigated Negative Declaration is the appropriate level of environmental document. Therefore, findings pursuant to Public Resources Code Section 21081(a)(3) are not necessary.

5. **The design of the subdivision of land and the type of improvements are not likely to cause serious public health problems.**

The implementation of the proposed conditions will ensure that the Project will not be detrimental to the public interest, health, safety, convenience, or welfare of the City or the future residents of the development. As previously mentioned, a Mitigated Negative Declaration was prepared for the proposed subdivision, which analyzed items that can cause public health problems such as Air Quality, Hazardous Materials, and Utilities. It was determined through the environmental document that with incorporation of mitigation measures, the impacts to public health problems would be less than significant

6. **That design of the subdivision provides for future passive or natural heating or cooling opportunities in the subdivision to the extent feasible.**

The design of the subdivision will provide for future passive cooling opportunities with the implementation of building setbacks, lot coverage requirements, landscaping requirements, including required street trees, and open space areas. This can also include configuration to permit orientation of a structure to take advantage of shade and prevailing breezes. Furthermore, natural heating opportunities can be provided with orientation of a structure in an east-west alignment for southern exposure.

The proposed project is a subdivision and Planned Development Permit, subsequent development will be analyzed and conditioned through a Site Plan and Design Review. As part of the Site Plan and Design Review process, the Planning Department will ensure that natural heating and cooling opportunities are explored to the extent feasible and condition the project accordingly.

COPY

7. **The design of the subdivision and the type of improvements will not conflict with easements acquired by the public at large for access through or use of property within the proposed subdivision, or the design of the alternate easements which are substantially equivalent to those previously acquired by the public will be provided.**

   Per the title report provided by the project applicant, the site consists of two easements for a right-of-way over a strip of land 30 feet wide located outside the property line on Cawston Avenue. The second easement is granted to Easter Municipal Water District for sewage transmission and collection facilities. This easement is located outside the property lines along Cawston Avenue. These two easements are shown in the Tentative Tract Map and will not conflict with the development of the proposed Project.

8. **The subdivision is consistent with the City's parkland dedication requirements (per the Quimby Act), as applicable, in accordance with Chapter 16.75 (Parkland Dedication and Fees).**

   The proposed subdivision is consistent with the City's parkland dedication requirements pursuant to Chapter 16.75 of the San Jacinto Municipal Code. The Project provides approximately 3.26 acres of usable parkland within designated park lots, which contributes toward satisfying the City's parkland dedication requirement.

   Any remaining parkland obligation will be satisfied through the payment of in-lieu fees, in accordance with Chapter 16.75, as required by the Conditions of Approval.

   Based on the foregoing, the Project complies with the City's parkland dedication requirements..

Attachment: Findings of Facts (Chacon Farms (PROJ23-0029))

COPY

PLANNED DEVELOPMENT PERMIT FINDINGS:

1. **The Planned Development Permit will:**

   a. **Be allowed within the subject base zone;**

   The Project includes a Change of Zone to the Residential Low Density (RL) zone. The RL zone is intended to accommodate detached single-family residential development, along with accessory uses and other compatible uses, at a density range of 2.1 to 7.0 dwelling units per acre.

   The Planned Development Permit is an allowed entitlement within the RL zone and is intended to provide flexibility from standard development requirements in order to achieve superior site design and community planning. Accordingly, the Planned Development Permit is permitted within the proposed base zone..

   b. **Be consistent with the purpose, intent, goals, policies, actions, and land use designations of the General Plan and any applicable specific plan;**

   The Project site is proposed to be designated Low Density Residential (LDR) under the General Plan, which permits detached single-family residential development at a density of 2.1 to 7.0 dwelling units per acre. The Project proposes a density of 5.53 dwelling units per acre, which is within the allowable range and consistent with the intended use of the LDR designation. The Project site is not located within a Specific Plan area.

   The Project is consistent with the purpose and intent of the General Plan by facilitating a well-planned residential community that balances efficient land use with neighborhood compatibility and access to amenities. The Planned Development Permit allows for modifications to development standards that support a cohesive site design while maintaining consistency with the overall density and character envisioned by the General Plan.

   The Project implements applicable General Plan goals and policies, including:

   - Land Use Policy LU-1.6, by incorporating an integrated system of open space and recreational amenities, including multiple parks, paseos, and gathering areas that support community interaction and outdoor activity;
   - Land Use Policy LU-4.4, by promoting pedestrian-oriented design through internal walkways, paseo connections, and

COPY

Attachment: Findings of Facts (Chacon Farms (PROJ23-0029))

access to the Class I multi-use trail along Esplanade Avenue; and

- Land Use Policy LU-5.4, by providing well-designed, multi-functional open spaces, including neighborhood parks and a basin park, that serve a variety of recreational and community needs.

Based on the foregoing, the Planned Development Permit is consistent with the purpose, intent, goals, policies, and land use designations of the General Plan.

c. **Be generally in compliance with all of the applicable provisions of this Development Code relating to both on-site and off-site improvements that are necessary to accommodate flexibility in site planning and property development and to carry out the purpose, intent, and requirements of this Chapter and the subject base zone, including prescribed development standards and applicable design guidelines, except for those provisions modified in compliance with this Chapter.**

The Project is compliant with the Provisions of the Development Code relating to on-site and off-site improvements. The Project's off-site improvements will include a Class 1 Multi-Use along Esplanade Avenue as required per the Trails Master Plan. Additionally, the Project will be conditioned to dedicate and provide improvement along Esplanade Avenue, Cawston Avenue, and Seventh Street. On-site improvements will include 3.26-acres of open space amenities and connections to the proposed Class I Multi-Use Trail. The proposed modified development standards for the Project will accommodate flexibility in site planning and property development, while still upholding the intentions and goals of the Development Code by creating a cohesive neighborhood community. Therefore, the Project is found to be compliant with all the applicable provisions of the development code relating to both on-site and off-site improvements.

d. **Ensure compatibility of property uses within the zone and general neighborhood of the proposed development.**

The Project will include single-family residential uses and complementary recreational and open space areas. The combination of uses is generally considered compatible and will create a cohesive residential neighborhood. The development of the Class I Multi-Use Trail will continue the intent of creating an integrated trails network throughout the City and will serve as an amenity for residents nearby and within the development. The Project site is bound by residential uses.

COPY

The surrounding land uses designations include: Specific Plan to the west, Low Density Residential to the north, Very Low Density Residential to the east, and City of Hemet to the south. Development surrounding the Project Site is planned to be of similar character, land use, and density. Therefore, the proposed Project is found to be compatible the zone and with the general neighborhood of the proposed development.

2. **The proposed project will produce a comprehensive development of superior quality and excellence of design (e.g., appropriate variety of structure placement and orientation opportunities, appropriate mix of structure sizes, high quality architectural design, significantly increased amounts of landscaping and improved open space, improved solutions to the design and placement of parking and loading facilities, incorporation of a program of highly enhanced amenities [e.g., additional public art], LEED or other "green" related standards, etc.) than might otherwise occur from more typical development applications;**

The proposed Project includes 3.26-acres of common areas and recreational amenities. This includes play areas, turf / open space area, and picnic areas. The Project additionally proposes to construct a Class I Multi-Use Trail along Esplanade Avenue. This trail will include a meandering six (6) foot sidewalk, landscaped parkway located on both sides of the walkway, and proposed channel. This trail will connect to the internal pedestrian paths.

The architectural styles proposed will reflect styles farm style inspired. The Project, with its architectural styles, supporting landscape palette, open spaces, and monumentation, offers a development with excellence of design. The architectural styles include Spanish, Prairie, and Farmhouse for the future 419 dwelling units, accompanied by nine (9) color schemes. The incorporation of multiple styles and color options is intended to enhance visual interest while maintaining a unified aesthetic throughout the subdivision. In addition, the PDP proposes five (5) distinct floor plans, each offering three (3) elevation types. The design of the residential lots and variation in architecture creates a diverse community and avoids a monotonous appearance.

3. **Proper standards and conditions have been imposed to ensure the protection of the public health, safety, and welfare;**

The Project Site is currently and has historically been used for agricultural purposes. Due to this fact, the environmental analysis of the Project Site included a Phase I Environmental Safety Assessment (Phase I ESA) to analyze any hazards that could result from development of the site. The Phase I ESA found that due to the historical use of this property for agricultural purposes dating back from at least 1930's, it is possible agricultural chemicals

COPY

such as pesticides and fertilizers have likely been applied to crops grown on the Proposed Project Site. Through the adoption of the Mitigation and Monitoring Program within the Conditions of Approval for the Project, any hazards that could create a significant hazard to the public or the environment through the conversion of agricultural land to residential uses will be significantly reduced to create a safe, healthy environment. Additionally, plans for the proposed residential development will be required to be submitted and approved through Site Plan and Design Review process.

Additionally, the Zoning, Fire, and Building Codes will ensure that that the development of the project will meet applicable safety standards. Therefore, it is found that with the incorporation of the above mentioned Mitigation Measures, Conditions of Approval, and the requirements of the Zoning, Fire, and Building Codes will ensure the protection of the public health, safety and welfare.

4. **Proper on-site traffic circulation (e.g., pedestrian and vehicular) and control is designed into the development to ensure protection for fire suppression and police surveillance equal to or better than what would normally be created by compliance with the minimum setback and parcel width standards identified in Article 2 (Zones, Allowable Land Uses, and Zone Specific Standards);**

The proposed Planned Development Permit incorporates a comprehensive internal circulation system designed to accommodate both vehicular and pedestrian traffic while ensuring adequate access for emergency response and public safety services. The Project has been reviewed for compliance with applicable City standards and the requirements of the City Engineer, Riverside County Fire Department, and Sheriff's Department.

The internal street network is designed to provide efficient circulation and connectivity throughout the Project site. Roadway widths, including minimum 24-foot fire access lanes where applicable, and turning radii have been designed to accommodate emergency vehicles, service vehicles, and passenger traffic. The interconnected street system enhances accessibility for fire suppression and law enforcement response.

Pedestrian circulation is supported through sidewalks, paseos, and connections to on-site parks and adjacent improvements, including the Class I multi-use trail along Esplanade Avenue. These features promote safe and convenient pedestrian movement throughout the community.

Based on the foregoing, the Project provides proper on-site traffic circulation and control for both vehicular and pedestrian movement and ensures protection for fire suppression and police services equal to or better than that which would be achieved through strict compliance with standard

COPY

development requirements..

5. **The subject parcel is adequate in terms of size, shape, topography, and circumstances to accommodate the proposed development;**

   The proposed Project Site is generally flat and is shaped to accommodate a proper lot layout. Section 17.620.020 of the Development Code states that the minimum lot size for a Planned Development Permit is 2 acres. The proposed Project site greatly exceeds this requirement and is 73.06-net acres. The proposed Project will provide an efficient use of land that will meet the purpose and intent of the Low Density Residential (LDR) General Plan land use designation by modifying the development standards to accommodate a 2-7 dwelling unit per acre development as required by the 2024 General Plan. Therefore, the subject parcel is adequate in terms of size, shape, topography, and circumstances to accommodate the proposed development.

6. **Adequate public services and facilities exist, or will be provided, in compliance with the conditions of approval, to serve the proposed development and the approval of the proposed development will not result in a reduction of public services to properties in the vicinity to be a detriment to public health, safety, and general welfare;**

   Adequate public services and facilities exist, or will be provided, to serve the proposed development. The Project has been reviewed by applicable City departments and service providers, including Public Works, Public Utilities, Sheriff's Department, and Riverside County Fire Department, to ensure that the development can be adequately served.

   Utility services, including potable water, wastewater, electricity, natural gas, telecommunications, and solid waste services, are available within the vicinity of the Project site or will be extended to serve the development. Eastern Municipal Water District has indicated its willingness and ability to provide water and wastewater service to the Project.

   The Project will be conditioned to ensure that all required infrastructure improvements are constructed and that service connections and applicable fees are provided prior to occupancy. Emergency access and response capabilities have been incorporated into the Project design and will be subject to review and approval by the appropriate agencies.

   Based on the foregoing, adequate public services and facilities exist, or will be provided, to serve the Project, and the proposed development will not result in a reduction of service levels to surrounding properties.

COPY

7. **The proposed development, as conditioned, will not have a substantial adverse effect on surrounding property or their allowed use;**

   The proposed development will not have a substantial adverse effect on surrounding properties or their allowed uses. The Project is consistent with the General Plan and zoning designations of the surrounding area and represents a logical extension of existing and planned residential development.

   The Project has been designed to be compatible with adjacent uses through site planning, building placement, and the incorporation of landscaping, open space, and internal circulation. The transition from the Project site to surrounding properties is appropriate for the area, whether adjacent lands remain in agricultural use or develop in accordance with the General Plan.

   The Project is subject to Conditions of Approval and compliance with applicable Municipal Code requirements, including noise, lighting, and traffic standards, as well as the California Building Code and Fire Code. These requirements are intended to prevent nuisances and ensure that the development does not create adverse impacts on surrounding properties.

   Based on the foregoing, the proposed development, as conditioned, will not have a substantial adverse effect on surrounding property or their allowed use.

8. **If the development proposes to mix residential and commercial uses whether done in a vertical or horizontal manner, the residential use is designed in a manner that it is appropriately buffered from the commercial use and is provided sufficiently enhanced amenities to create a comfortable and healthy residential environment and to provide a positive quality of life for the residents. The enhanced amenities may include additional landscaping, additional private open space, private or separated entrances, etc;**

   The Project does not propose a mix of residential and commercial uses as the project does not include Commercial uses.

9. **The design, location, operating characteristics, and size of the proposed development will be compatible with the existing and future land uses in the vicinity, in terms of aesthetic values, character, scale, and view protection; and**

   This project will have the appropriate buffers such as exterior walls and perimeter landscaping to ensure that it will be compatible with any future land use whether it remains agricultural, develops with Residential, Commercial or a project that integrates both, in accordance with the General Plan.

COPY

10. **The applicant agrees in writing to comply with any and all of the conditions imposed by the review authority in the approval of the Planned Development Permit.**

    The Applicant has agreed with all of the conditions imposed by the review authority prior to the issuance of any permits or recordation of any documents.

Approval Date: Tentative
Effective Date: Tentative
Expiration Date: Tentative

PROJECT LOCATION: West site of Cawston Avenue extending between Seventh Street and Esplanade Avenue
San Jacinto, CA APN: 432-260-009, 432-260-026, 432-260-027

APPLICANT: **Ramona Dairy, LLC**
Richard Micheal
2451 Ramona Expressway
San Jacinto, CA 92582

ACCEPTED AND AGREED TO BY: _____
Applicant (signature) Date

PROJECT DESCRIPTION

A General Plan Amendment from Very Low Density Residential to Low Density Residential; a Change of Zone from Rural Residential to Residential Low Density; approval of a Planned Development Permit and Tentative Tract Map 39076 to subdivide three parcels into 419 single-family residential lots on approximately 73.97 gross acres, including on-site roadways, parks, a detention basin, and landscaping.

COPY

General Notes, Requirements, and Conditions of Approval General Plan Amendment, Change of Zone, Planned Development Permit, and Tentative Tract Map 39076

General Requirements & Information

A. To the extent permitted by law the applicant/licensee shall by accepting these conditions agree to defend (with legal counsel of City's selection), indemnify, and hold harmless the City and its elected and appointed officials, agents, attorneys, employees and officers, from any action, claim or proceeding brought by any party other than the applicant/licensee against the City or its elected and appointed officials, agents, employees and officers to attack, set aside, void, or annul a discretionary land use approval of the City, which action is brought within the applicable statute of limitations. The required indemnification shall include damages awarded against the City, if any, costs of suit, attorneys' fees and other costs and expenses incurred in connection with the action. The City shall promptly notify the applicant/licensee of any such claim, action, or proceeding and cooperate fully in the defense.

B. The residential subdivision shall comply with all required development standards of the Development Code and the Planned Development Permit (PDP). When a conflict between the Development Code and the PDP exists, the PDP standards will supersede the Development Code

C. An SB 330 Preliminary Application was submitted for this development and became effective on March 31, 2025 (the "Vesting Date"), which is the date the applicant submitted a complete application pursuant to Government Code Section 65941.1. **The City will utilize the development standards and fees in effect on March 31, 2025**.

D. The residential subdivision shall comply with the Subdivision Map Act (Government Code Section 66410 et seq.) and Title 16 (Subdivisions) of the Municipal Code.

E. The effective date of Tentative Tract Map 39076 is ten (10) days following the approval date. The approval will lapse if a final map has not recorded within three (3) years from the date upon which the approval was granted. Unless a time extension is approved by the City's applicable review authority, applications for time extensions must be received prior to the expiration date. The filing of a final map for phase 1 of the Tentative Tract Map shall extend the life of the remaining portion of the Tentative Tract Map consistent with Government Code section 66452.6. The Tentative Tract Map may be recorded in phases in a manner consistent with the phasing map.

Attachment: Conditions of Approval (Chacon Farms (PROJ23-0029))

General Notes, Requirements, and Conditions of Approval General Plan Amendment, Change of Zone, Planned Development Permit, and Tentative Tract Map 39076

F. The developer/applicant or successor in interest shall pay any outstanding planning application or processing fees within ten (10) days of City's request therefore and prior to permits being exercised. Failure to do so will be grounds for Code Enforcement actions, revocation, or further legal action.

G. The Project shall fully and continually comply with all applicable conditions of approval, State, Federal, and local laws in effect at the time the permit is approved and exercised, and which may become effective and applicable thereafter. Failure to do so will be grounds for Code Enforcement actions, revocation, or further legal action.

H. This permit shall run with the land associated to the project/permit and continues to be valid upon change of ownership. All applicable conditions of approval shall continue to apply with a change in property ownership.

I. All plans submitted to the City shall be in substantial conformance with the plans in this approval as conditioned. This condition applies to site plans, grading plans, landscape plans, building plans, elevations, and all other illustrations, text, or plans submitted to the City in connection with the Project.

J. The approved entitlement cannot be legally conducted on the subject property until all applicable conditions of approval have been met to the satisfaction of the Planning Department.

K. The applicant shall be subject to all applicable development fees. Such fees may include, but not be limited to Development Impact Fees, Park Fees, School Fees, Transportation Uniform Mitigation Fees, and Multiple Species Habitat Conservation Plan Fees.

L. Signs shall be permitted in accordance with Chapter 17.335 – Sign Regulations of the Development Code in effect on the Vesting Date. Any signs, including exterior-mounted, monument, and window signs, shall be subject to separate review and assessment. A separate sign application, including fees and additional sets of plans, will be necessary prior to sign permit issuance.

M. The City shall have the right to inspect the site and facilities to ensure compliance with the conditions of approval and to recover its actual costs related to such inspections from the property owner or tenant.

COPY

Attachment: Conditions of Approval (Chacon Farms (PROJ23-0029))

General Notes, Requirements, and Conditions of Approval General Plan Amendment, Change of Zone, Planned Development Permit, and Tentative Tract Map 39076

N. Site Plan and Design Review (SPDR) for construction of the dwelling units shall ensure that all lumber scraps, combustible materials, and other debris be picked up daily, or more often as required by the Building and Safety Division.

O. All existing and new utilities adjacent to and on the Project site shall be located underground as per City of San Jacinto Municipal Code Section 15.32.

P. In the event of a conflict between any conditions for this approval, the most restrictive regulations shall apply.

Q. The contractor shall comply with the following best practices during the construction phase of the development.

- The erection (including excavation), demolition, alteration or repair of any building shall occur between the **hours** of seven a.m. and seven p.m. on weekdays and Saturdays, and between 9:00 a.m. and 6:00 p.m. on Sundays and holidays, except when such work complies with the terms of a temporary use permit which may be issued by the community development director or his or her designee, upon a showing of sufficient need due to hot or inclement weather, or the use of an unusually long process material, or other circumstances of unusual and compelling nature.
- During the entire active construction period, equipment and trucks used for the project construction shall utilize the best available noise control techniques (e.g., improved mufflers, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds), wherever feasible.
- During the entire active construction period, stationary noise sources shall be located as far from sensitive receptors as possible, and they shall be incorporated to the extent feasible.
- Select haul routes that avoid the greatest amount of sensitive use areas. Avoid soil hauling through residential areas.
- Signs shall be posted at the job site entrance(s), within the on-site construction zones, and along queueing lanes (if any) to reinforce the prohibition of unnecessary engine idling. All other equipment shall be turned off if not in use for more than 5 minutes.

COPY

Attachment: Conditions of Approval (Chacon Farms (PROJ23-0029))

General Notes, Requirements, and Conditions of Approval
General Plan Amendment, Change of Zone, Planned Development Permit, and Tentative Tract Map 39076

- Equipment shall be maintained and operated such that loads are secured from rattling or banging.

R. A copy of all pages of these Conditions shall be included in the construction drawing packages for grading plans and building permits, including landscaping permits.

S. During the entire active construction period and to the extent feasible, the use of noise-producing signals, including horns, whistles, alarms, and bells, shall be for safety warning purposes only. The construction manager shall use smart back-up alarms, which automatically adjust the alarm level based on the background noise level, or switch off back-up alarms and replace them with human spotters in compliance with all safety requirements and laws.

T. A grading permit shall be obtained from the City of San Jacinto prior to the commencement of any grading outside of the City-maintained Road right-of-way.

U. The Project is required to comply with San Jacinto Development Code Section 17.300.080 which requires all exterior lighting to be shielded or modified and located so as to eliminate spillover illumination or glare beyond the property line or upward into the sky.

Engineering Department General Requirements & Information

V. With respect to the Conditions of Approval for the above referenced project, the City of San Jacinto requires that the developer/property owner provides the following street improvements and/or road dedications in accordance with the City of San Jacinto Municipal Code. It is understood that the site plan correctly shows all existing and proposed easements, traveled ways, rights-of-way, and drainage courses with appropriate Q's and their omission may require the site plan to be resubmitted for further consideration. These ordinances and the following conditions are essential parts and requirement occurring in ONE is as binding as though occurring in all. They are intended to be complimentary and to describe the conditions for a complete design of the improvements. Unless otherwise noted, all offsite improvements as conditioned shall be installed prior to issuance of any occupancy permits. All questions regarding the true meaning of the conditions shall be referred to the City Engineer's office. In the event of a conflict between any conditions stated below, those imposed by Planning Department and others, and requirements identified in the approved Traffic impact Analysis, the most stringent in the opinion of the City shall prevail.

W. The project grading shall be in a manner to perpetuate existing natural patterns. Any deviation from this, concentration or increase in runoff must have approval of adjacent property owners and City Engineer. The developer/property owner shall accept the offsite runoff and convey to acceptable outlet.

X. Prior to commencement of any construction or installation of fencing in public right-of-way, an encroachment permit shall be obtained from the City Engineer's office.

Y. The developer/property owner shall secure City's and appropriate agencies' clearances and approvals of the improvement plans.

Timing	Responsible Department	Prior to a Specific Date	Met?
30-days Prior to Grading	Planning	26) **Mitigation Measure BIO-1**: Burrowing Owl Pre-Construction Surveys. The Project Applicant shall retain a qualified Biologist to conduct a pre-construction survey for burrowing owl on the Proposed Project Site (and including adjacent areas within 500 feet to the extent possible) within 30 days prior to construction. Methods for the pre-construction surveys shall be conducted as a one-day focused survey following the Burrowing Owl Survey Instructions for the Western Riverside Multiple Species Habitat Conservation Plan (MSHCP 2006). Following the survey, the Biologist shall prepare a Memorandum/Letter Report describing the methods and results of the survey for submittal to the City. If burrowing owl are observed, the Report shall also make recommendations for avoidance and minimization measures depending on the timing of construction and the location of the active burrow with respect to planned activities. If burrowing owl are observed, the Project Applicant (or their designee) shall contact the City to discuss avoidance and minimization options. During the breeding season (i.e., March 1 to August 31), restrictions shall be placed on construction activities in the vicinity of any active burrow until the burrow is no longer active, as determined by a qualified Biologist. The protective buffer shall be 500 feet (or as otherwise approved by the City) around the active burrow. The protective buffer shall be flagged clearly in the field, mapped as an "Environmentally Sensitive Area," and the maps provided to the Project Applicant, their designee (e.g., Construction Supervisor), and the City. During the wintering season, an active burrow may be closed following CDFW-approved procedures with permission from the City. If the wintering burrow would not be directly impacted, a protective buffer of 160 feet (or as otherwise approved by the City) shall be placed around the burrow. The protective buffer shall be flagged clearly in the field, mapped as an "Environmentally Sensitive Area," and the maps	☐

		provided to the Project Applicant, their designee (e.g., Construction Supervisor), and the City. The Project Applicant shall not proceed with construction until the avoidance and minimization measures have been approved by the City and all appropriate protections are in place.	
Three days prior to Grading	Planning	27) **Mitigation Measure BIO-2**: Nesting Bird Survey. To the extent possible, vegetation removal will be conducted during the non-breeding season (September 12 to January 31) in order to minimize direct impacts on nesting birds and raptors. If construction activities would be initiated during the peak breeding season for nesting birds/raptors (February 1–June 30), a pre-construction survey will be conducted by a qualified Biologist within three days prior to the initiation of construction (including demolition of structures). The nesting bird/raptor survey area will include a buffer of 100 feet around the work area for nesting birds and a buffer of 500 feet around the work area for nesting raptors. This survey can be combined with the pre-construction burrowing owl survey described in MM BIO-1. If the Biologist does not find any active nests in or immediately adjacent to the impact area, construction activities can proceed. If the Biologist detects an active nest within or immediately adjacent to the construction area and determines that the nest may be impacted, or breeding activities substantially disrupted by increased activity around the nest, the Biologist will determine an appropriate protective buffer around the nest depending on the sensitivity of the species and the nature of the construction activity. The protective buffer shall be between 25 to 100 feet for nesting birds and 300 to 500 feet for nesting raptors. No work will be allowed within the protective buffer until nesting activity has ended, as determined by a qualified Biologist. Any protective buffers will be flagged clearly in the field, mapped as “Environmentally Sensitive Areas,” and the	☐

Prior to Issuance of Grading Permit	Planning	32) **Mitigation Measure BIO-4.** MSHCP Construction Minimization Measures. The Project Applicant and their designee (i.e., Construction Contractors) shall follow required MSHCP Construction Minimization Measures (Section 7.5.3 of the MSHCP). Applicable construction minimization measures are listed below. Plans for water pollution and erosion control will be prepared for all Discretionary Projects involving the movement of earth in excess of 50 cubic yards. The plans will describe sediment and hazardous materials control, dewatering or diversion structures, fueling and equipment management practices, use of plant material for erosion control. Plans will be reviewed and approved by the City prior to construction. Timing of construction activities will consider seasonal requirements for breeding birds and migratory non-resident species. Habitat clearing will be avoided during species active breeding season defined as March 1 to June 30. Sediment and erosion control measures will be implemented until such time soils are determined to be successfully stabilized.	☐
Prior to Issuance of Grading Permit	Planning	33) **Mitigation Measure CUL-1.** Archaeological Monitor. The Project proponent shall retain a Project Archaeologist prior to the initiation of ground-disturbing activities to monitor ground-disturbing activities occurring within native sediment (in situ material). In the event that archaeological resources are discovered at the Proposed Project Site, the handling of the discovered resources shall occur, as described below. All artifacts discovered shall be inventoried and analyzed by the Project Archaeologist. If any artifacts of Native American	☐

		origin are discovered, all activities in the immediate vicinity of the find (within a 50-foot radius) shall stop, and the Project Archaeologist shall notify the property owner and tribes identified by the NAHC as being affiliated with the area. The Project Archaeologist and Tribal Representative will analyze the Native American artifacts for identification as everyday life and/or religious or sacred items, cultural affiliation, temporal placement, and function, as deemed possible. The significance of Native American resources shall be evaluated in accordance with the provisions of CEQA and shall consider the religious beliefs, customs, and practices of the affiliated tribes. All items found in association with Native American human remains shall be considered grave goods or sacred in origin and subject to special handling. Non-Native American artifacts shall be inventoried, assessed, and analyzed for cultural affiliation, personal affiliation (prior ownership), function, and temporal placement. After analysis and reporting, these artifacts shall be subjected to curation or returned to the property owner, as deemed appropriate. Once grading activities have ceased or the Project Archaeologist, in consultation with the lead agency and Tribal Representative, determines that monitoring is no longer necessary, monitoring activities can be discontinued. A report of findings, including an itemized inventory of recovered artifacts, shall be prepared upon completion of the steps outlined above. A copy of the report shall also be filed with the EIC.

Prior to Issuance of Grading Permit	Planning	35) **Mitigation Measure GEO-1**. Paleontological Treatment Plan. In the event that potential paleontological resources are discovered during ground-disturbing activities, work will stop in that area and within 30 feet of the find until a qualified paleontologist can assess the significance of the find and, if necessary, develop appropriate treatment measures. Treatment measures may include monitoring by a qualified paleontologist during construction-related ground- disturbing activities. The monitor will retain the option to reduce monitoring if it is determined that the sediments were previously disturbed. Monitoring may also be reduced if potentially fossiliferous units are not present or, if present, are determined to have a low potential to contain fossil resources. The monitor will be equipped to salvage fossils and samples of sediments as they are unearthed and will be empowered to temporarily halt or divert equipment to allow removal of abundant or large specimens. Recovered specimens will be prepared to a point of identification and permanent preservation, including washing of sediments to recover small invertebrates and vertebrates. Specimens will be curated into a professional, accredited museum repository with permanent retrievable storage. A report of findings, with an appended itemized inventory of specimens, will be prepared and will signify completion of the mitigation.	☐

General Notes, Requirements, and Conditions of Approval
General Plan Amendment, Change of Zone, Planned Development Permit, and Tentative Tract Map 39076

Prior to Issuance of Building Permits of Phase 1	Planning	57) **Mitigation Measure HAZ-2.** Methane Testing. Prior to the issuance of building permits, methane testing shall be conducted by a licensed engineer, geologist, or registered environmental assessor, and as necessary, shall include measures to reduce concentrations of methane to an acceptable level.	☐
Prior to Issuance of Building Permits of Phase 1	Planning	58) The developer/applicant or successor in interest shall record a "Water Quality Management Plan and Urban Runoff BMP Transfer Access and Maintenance Agreement," to provide public notice of the requirement to implement the approved Final project-specific WQMP and the maintenance requirements associated with the WQMP. The developer/applicant or successor in interest shall ensure the following, pursuant to Section XII. I. of the 2010 NPDES Permit: Field verification that structural Site Design, Source Control, and Treatment Control BMPs are designed, constructed and functional in accordance with the approved Final Water Quality Management Plan (WQMP). City WQMP Inspector will be notified for required inspections during construction.	☐
Prior to Issuance of Building Permits of Phase 1	Planning	59) Submit a detailed landscape and irrigation plan for review and approval. The landscape plans shall be prepared by a licensed landscape architect in conformance with Chapter 17.325 – Water Efficient Landscape and Irrigation and Section 17.325.060 – Landscape and Irrigation Submittal Package Requirements of the Development Code and the City Landscape Design Guidelines for review and approval by the City Landscape Architect. Plans should be submitted at least 30 days prior to the expected date of permit issuance. The Landscape and Irrigation Submittal Package shall include: a. A completed application packet provided by the City; b. The Water Efficient Landscape Worksheet, including the MAWA	☐

		and ETWU; Note the ETo rate for San Jacinto is 56.8 per State guidelines. c. The soils management report; d. The landscape design plan; e. The irrigation design plan; f. The grading plan.	
Prior to Issuance of Building Permits of Phase 1	Planning	60) Submit a Fence and Wall Plan for review that shows the following: a. The developer will work with any adjacent property owners to remove existing walls/fencing (double walls are not permitted). b. The developer will show on the plans how they will connect to the existing wall located to the west. Proposed wall should be similar in color, material, pilaster size, and caps.	☐
Prior to Issuance of Building Permits of Phase 1	Building & Safety	61) The contract with demolition and construction contractors shall include the requirement that all materials that can be recycled shall be salvaged and recycled. This includes, but is not limited to, wood, metals, concrete, road base, and asphalt. The developer shall submit a recycling plan to the City for review and approval prior to the start of demolition/construction activities to accomplish this objective.	☐
Prior to Issuance of Building Permits of Phase 1	Riverside County Fire Department	62) Residential Fire Sprinklers: Residential fire sprinklers are required in all one and two-family dwellings per the California Residential Code (CRC). Plans must be submitted to the Office of the Fire Marshal for review and be approved prior to installation. Reference	☐

General Notes, Requirements, and Conditions of Approval
General Plan Amendment, Change of Zone, Planned Development Permit, and Tentative Tract Map 39076

Prior to Issuance of Building Permits of Phase 1	Riverside County Fire Department	63) Phased Construction Access and Water Supply: If construction is phased, an approved phasing plan shall be approved by the Fire Department. Each phase shall provide approved access and water supply for fire protection prior to any construction. Reference CFC as amended.	☐
Prior to Issuance of Building Permits of Phase 1	Riverside County Fire Department	64) Fire and Life Safety Requirements - Final fire and life safety conditions will be addressed when the Fire Department reviews any subsequent submittals. These conditions will be based on California Fire Code (CFC), California Building Code (CBC), and related codes/standards adopted and amended at the time of construction plan submittal.	☐
Prior to Issuance of Building Permits of Phase 1	Riverside County Fire Department	65) Fire Protection Water Supplies/Fire Flow - Minimum fire flow for the construction of all buildings is required per CFC Appendix B. Prior to building permit issuance for new construction, the applicant shall provide documentation to the Fire Department to show there exists a water system capable of delivering the required fire flow. Specific design features may increase or decrease the required fire flow. Reference CFC 507.3 as amended. **Will Serve Letters from the responsible water purveyor are required prior to a map recordation.**	☐

General Notes, Requirements, and Conditions of Approval
General Plan Amendment, Change of Zone, Planned Development Permit, and Tentative Tract Map 39076

Prior to Issuance of Building Permits of Phase 1	Riverside County Fire Department	66) Fire Protection Water Supplies/Hydrants – The minimum number of fire hydrants required, as well as the location and spacing of fire hydrants, shall comply with the CFC Appendix C. Fire hydrants shall be located no more than 600 feet from all portions of the exterior of the building along an approved route from a fire apparatus access road. Where new water mains are extended along streets and hydrants are not needed for protection of structures, standard fire hydrants shall be provided as spacing not to exceed 1000 feet along streets for transportation hazards. The size and number of outlets required for the approved fire hydrants are 4" x 2 ½". Final fire hydrant locations shall be determined during the fire water plan review. Reference CFC as amended.	☐
Prior to Issuance of Building Permits of Phase 1	Riverside County Fire Department	67) Tract Water Plans – If fire hydrants are required to be installed, applicant/developer shall furnish the water system fire hydrant plans to Fire Department for review and approval prior to building permit issuance. Plans shall be signed by a registered civil engineer, and shall confirm hydrant type, location, spacing, and minimum fire flow. Once plans are signed and approved by the local water authority, the originals shall be presented to the Fire Department for review and approval. Reference CFC as amended.	☐
Prior to Issuance of Building Permits of Phase 1	Riverside County Fire Department	68) Fire Department Access - Fire apparatus access roads shall be provided within 300 feet of all exterior portions of buildings, unless otherwise approved by the Fire Department. Fire apparatus access roads shall have an unobstructed width of no less than 24 feet. Dead-end fire apparatus access roads exceeding 150 feet shall provide an approved turn around. The minimum required turning radius of a fire apparatus access road is 38 feet outside radius and 14 feet inside radius. The construction of the fire apparatus access roads shall be all weather and capable of sustaining 75,000 lbs. Unless otherwise approved, the grade of a fire apparatus access road shall not exceed 16 percent and the cross slope shall not	☐

COPY

General Notes, Requirements, and Conditions of Approval
General Plan Amendment, Change of Zone, Planned Development Permit, and Tentative Tract Map 39076

		exceed 2.5 percent. The angles of approach and departure for fire apparatus access roads shall be a maximum of 6 percent grade change for 25 feet of approach/departure. Reference CFC as amended and Riverside County Fire Department Policies and Standards. Fire Lane marking: Identification and marking of fire lanes, including curb details and signage, shall comply with all Riverside County Fire Department Standards.	
Prior to Issuance of Building Permits of Phase 1	Riverside County Fire Department	69) Fire Department Access Turn Around - Dead-end fire apparatus access roads in excess of 150 feet in length shall be provided with a bulb turnaround at the terminus measuring a minimum of 38 feet outside radius and 14 feet inside radius. Parallel parking around the perimeter of the bulb is acceptable provided the bulb outside turning radius is increased by 8 feet. In-lieu of a bulb, a hammer-head type turnaround is acceptable where the top of the "T" dimension is 120 feet with the stem in the center. Additional turnaround designs may be acceptable as approved by the Fire Department. Reference CFC as amended and Riverside County Fire Department Policies and Standards.	☐

General Notes, Requirements, and Conditions of Approval
General Plan Amendment, Change of Zone, Planned Development Permit, and Tentative Tract Map 39076

Prior to Issuance of Building Permits of Phase 1	Riverside County Fire Department	70) Secondary Access - Additional fire apparatus access roads based on the potential for impairment by vehicle congestion, condition of terrain, climatic conditions, anticipated magnitude of a potential incident, or other factors that could limit access shall be required by the Fire Department. Secondary access fire apparatus access roads shall provide independent egress/access for the area, as approved by the Fire Department. Secondary access fire apparatus access roads shall be as remote as practical from the primary fire apparatus access road to reduce the possibility that both routes will be obstructed by a single emergency. Additional fire apparatus access roads based on the potential for impairment by vehicle congestion, condition of terrain, climatic conditions, anticipated magnitude of a potential incident, or other factors that could limit access may be required by the Fire Department. Reference CFC as amended and Riverside County Fire Department Policies and Standards.	☐
Prior to Issuance of Building Permits of Phase 1	Riverside County Fire Department	71) Traffic Calming Devices - Requests for installation of traffic calming designs/devices on fire apparatus access roads shall be submitted and approved by the Office of the Fire Marshal. Reference CFC as amended.	☐
Prior to Issuance of Building Permits of Phase 1	Engineering	72) The developer/property owner shall submit to Building and Safety a compaction certification from the Soils Engineer in compliance with the approved geotechnical/soils report and the pad elevation certification from the Civil Engineer in compliance with the approved Precise Grading Plan.

General Plan Amendment, Change of Zone, Planned Development Permit, and Tentative Tract Map 39076

Timing	Responsible Department	Prior to Acceptance of Public Improvements (Phase 1 and 2)	Met?
Prior to Acceptance of Public Improvements	Special Districts	73) Developer will ensure that funds are available for maintenance, in the event that improvements are completed, and ready for City takeover, PRIOR to levy collection. a. The first installment of collected assessments is paid to the City in January of each year. In the event that takeover is requested before the first installment is paid to the City, the Developer will either: i. Pay an advancement of funds for the months included from takeover to collection (amount to be set by cost estimate at annexation) OR ii. Continue to maintain improvements until City has acquired enough funds to sustain maintenance or until first assessment installment is received, whichever is first.	☐
Prior to Acceptance of Public Improvements	Special Districts	74) Upon acceptance and City take-over, developer will ensure that a minimum of one-year warranty is in place for landscape, irrigation, and basin integrity, inclusive pumps and mechanical equipment used for the maintenance of the improvements taken over.	☐
Prior to Acceptance of Public Improvements	Special Districts	75) Parks and associated facilities shall be inspected by a Certified Access Specialist through the Division of the State Architect ensuring compliance with applicable state and federal construction-related accessibility standards. A copy of the disability access inspection certificate and the CASp inspection report shall be provided to the City. Any accessibility barriers documented will need to be remedied prior to acceptance of the park by the City	☐

Timing	Responsible Department	Prior to the Issuance of a Certificate of Occupancy (Phase1)	Met?
Prior to the Issuance of a Certificate of Occupancy of Phase 1	Planning	78) The developer shall pay all required Development Impact Fees (DIF) for parkland acquisition, parkland development, and park facilities in effect on the Vesting Date prior to the issuance of a certificate of occupancy or final inspection.at the time of permit issuance for each home. Upon the City's acceptance of the completed parks, the developer will receive a refund of the applicable fees pursuant to Title 16 of the Municipal Code. The amount of the refund shall not exceed the actual cost of the parkland acquisition, parkland development, and park facilities, nor shall it exceed the amount of the fees initially paid. No cross-category credit or refund shall be provided. The developer must provide documentation to the City demonstrating that the refunds do not exceed the actual costs incurred.	☐
Prior to the Issuance of a Certificate of Occupancy of Phase 1	Building & Safety	79) The City has adopted Traffic Signal Mitigation Fees and the Transportation Uniform Mitigation Fee (TUMF) program. This Project shall be subject to payment of these fees prior certificate of occupancy unless exempted by the ordinance establishing the TUMF program. The fees shall be subject to the provisions of the enabling ordinance and based upon the fee schedule in effect upon the issuance of a certificate of occupancy or final inspection.	☐
Prior to the Issuance of a Certificate of Occupancy of Phase 1	Building & Safety	80) Specific addresses for each building shall be provided to make such number plainly visible from the public street, avenue, court, or alley upon which property fronts, and shall be contrasting color and background.	☐
Prior to the Issuance of a Certificate of Occupancy of Phase 1	Engineering	81) The following items need to be approved: a. Approved WDID No. b. Geotechnical Report (for reference) c. Storm Drain Improvement Plans	☐

Attachment: Conditions of Approval (Chacon Farms (PROJ23-0029))

Interior Streets shall be private with a full width of 52 feet to provide for 36 feet asphalt paving (using TI of 5.5 and PG 64-10), curb and gutter at 18 feet on both sides of centerline, an 8-foot parkway consisting of landscaping, a 6-sidewalk, and streetlights subject to photometric analysis per City of San Jacinto, County of Riverside and Caltrans standards. A 24-foot wide access shall be provided for Fire access at all times. Street parking shall be restricted to one side of the street.	
Prior to the Issuance of a Certificate of Occupancy of Phase 2	Engineering	111) Esplanade shall be improved to provide for a 73-foot wide halfwidth right-of-way, asphalt paving (using a TI of 9.5 and PG 70-10), 8-inch curb and gutter 38 feet north of centerline, a Class I: Multi-Use Path per the City of San Jacinto Trails Master Plan, and an 35-foot wide parkway consisting of landscaping, and streetlights subject to photometric analysis per City of San Jacinto, County of Riverside, and Caltrans standards. As part of the CIP program, the City is planning to widen Esplanade Avenue from Warren Road to Sanderson Avenue in 2026 and will include traffic signals at the intersections of Cawston Avenue and Sanderson Avenue, with two more lanes and a sidewalk. Streetlights will not be constructed as part of these improvements. The developer shall coordinate with the City on the installation of improvements. If the existing pavement is in good condition the developer/property owner may use grind and overlay technique as determined by the City Engineer.	☐

General Notes, Requirements, and Conditions of Approval
General Plan Amendment, Change of Zone, Planned Development Permit, and Tentative Tract Map 39076

Timing	Responsible Department	Prior to the Issuance of a Certificate of Occupancy (Phase 2)	Met?
Prior to the Issuance of a Certificate of Occupancy of Phase 2	Engineering	112) The developer shall provide water and sewer services to each lot in accordance with the requirements of the appropriate utility purveyor. This development is within the City of San Jacinto sewer service area, and the EMWD water service area. Water and sewer improvements shall be designed and installed per EMWD Standards.	☐
Prior to the Issuance of a Certificate of Occupancy of Phase 2	Engineering	113) Existing power poles with cables 66kV and under along the alley shall be removed and cables undergrounded. Poles with cables over 66kV shall be relocated as necessary, but other utilities on the pole must be undergrounded. Provide an undergrounding of utilities study by a utility consultant/electrical engineer analyzing and determining the extent of conformance.	☐
Prior to the Issuance of a Certificate of Occupancy of Phase 2	Engineering	114) The developer/property owner shall provide for utility trench surface repair as directed by the City Engineer if applicable.	☐
Prior to the Issuance of a Certificate of Occupancy of Phase 1	Engineering	115) A traffic signal shall be installed at the intersection of Cawston Avenue and Cottonwood Avenue. The intersection shall be improved to accommodate the required vehicular travel lanes and pedestrian crossings as recommended by the project's traffic engineer and as directed by the City Engineer.	☐

General Plan Amendment, Change of Zone, Planned Development Permit, and Tentative Tract Map 39076

Timing	Responsible Department	Prior to the Issuance of a Certificate of Occupancy (Phase 2)	Met?
Prior to the Issuance of a Certificate of Occupancy of Phase 2	Engineering	116) The following items need to be approved: a. approved WDID No. b. Geotechnical Report (for reference) c. Storm Drain Improvement Plans d. Hydrology and Hydraulic Analysis e. Final WQMP (for reference) including WDID No. The design shall comply with, RCFCD and City of San Jacinto most recent standards, criteria, and requirement and in effect at the time of construction and shall be coordinated with the approved plans of the adjacent developments.	☐

Timing	Responsible Department	Operational	Met?
Operational	Planning	117) The Project is required to comply with San Jacinto Development Code Section 17.300.080 which requires all exterior lighting to be shielded or modified and located so as to eliminate spillover illumination or glare beyond the property line or upward into the sky.	☐
Operational	Planning	118) All landscaped areas shall be maintained in a thriving condition free of weeds, trash, and debris.	☐

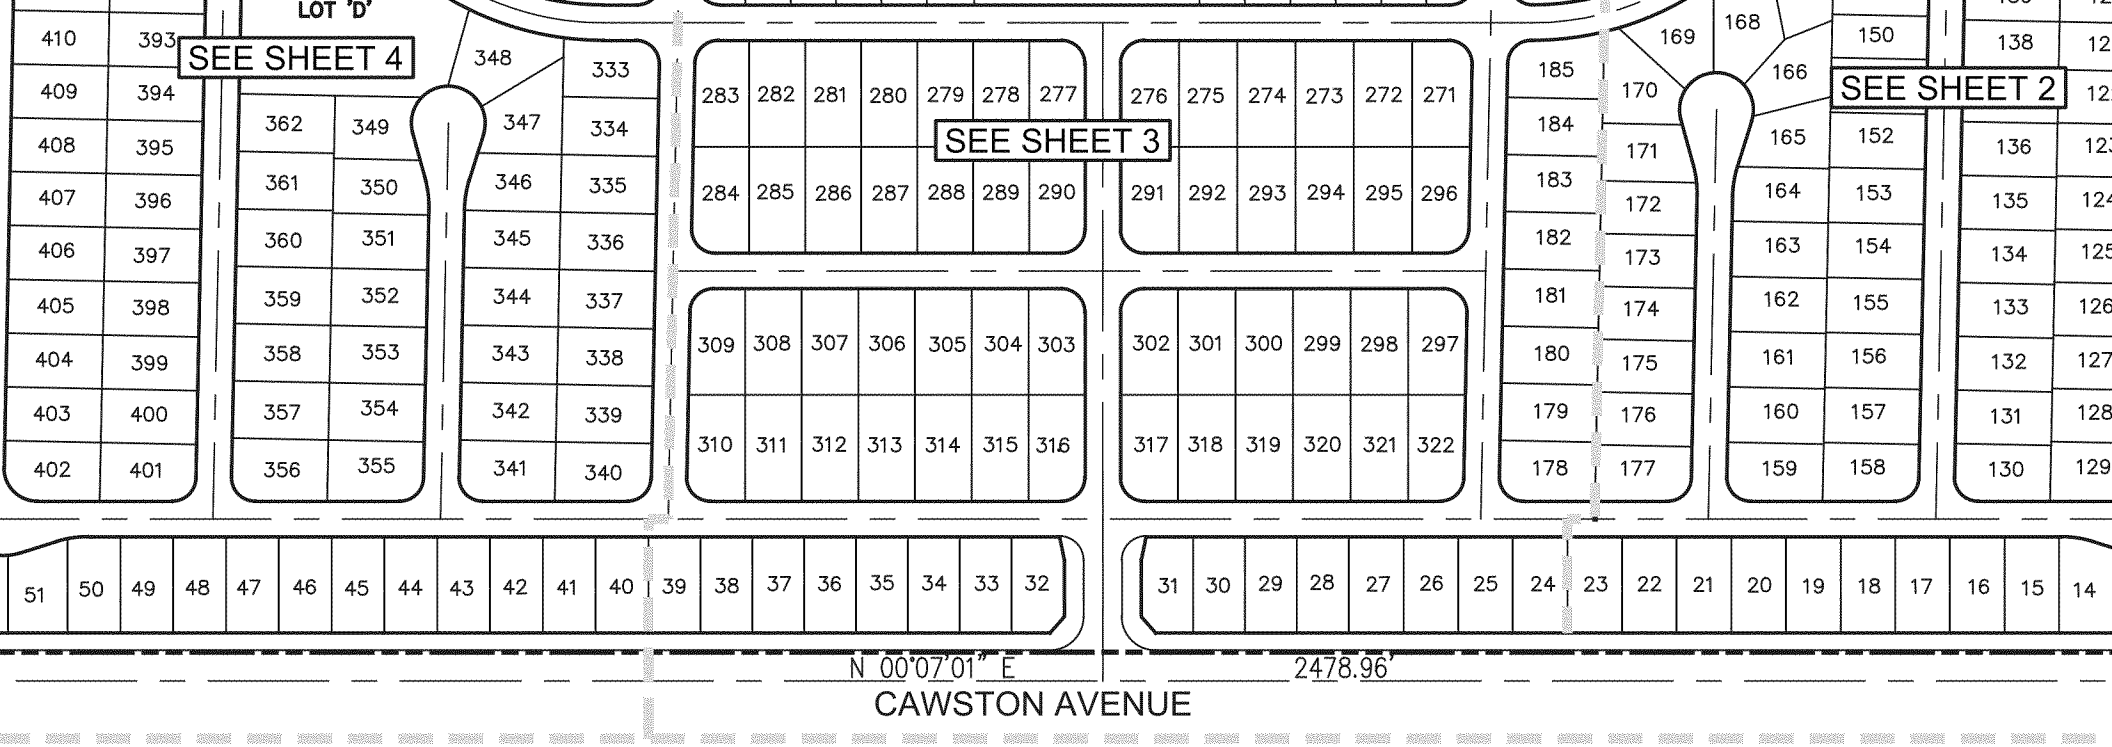
General Notes, Requirements, and Conditions of Approval
General Plan Amendment, Change of Zone, Planned Development Permit, and Tentative Tract Map 39076



Timing	Responsible Department	Operational	Met?
Ongoing	Planning	119) The erection (including excavation), demolition, alteration or repair of any building shall occur between the hours of seven a.m. and seven p.m. on weekdays and Saturdays, and between nine a.m. and six p.m. on Sundays and holidays, except when such work complies with the terms of a temporary use permit which may be issued by the community development director or his or her designee, upon a showing of sufficient need due to hot or inclement weather, or the use of an unusually long process material, or other circumstances of unusual and compelling nature. All construction equipment shall be muffled and/or surrounded by noise attenuating barriers.	☐
Ongoing	Planning	120) Mitigation Measure BIO-4. MSHCP Construction Minimization Measures. The Project Applicant and their designee (i.e., Construction Contractors) shall follow required MSHCP Construction Minimization Measures (Section 7.5.3 of the MSHCP). Applicable construction minimization measures are listed below. Plans for water pollution and erosion control will be prepared for all Discretionary Projects involving the movement of earth in excess of 50 cubic yards. The plans will describe sediment and hazardous materials control, dewatering or diversion structures, fueling and equipment management practices, use of plant material for erosion control. Plans will be reviewed and approved by the City prior to construction. Timing of construction activities will consider seasonal requirements for breeding birds and migratory non-resident species. Habitat	☐

OVERVIEW

1. **Project Title:** Chacon Farms, TTM 39076
2. **Project Location:** The Project site is in the City of San Jacinto, County of Riverside, California. The site is located off Cawston Ave and between W. 7th St. and W. Esplanade Ave.
3. **Project Sponsor's Name and Address**: Ramona Dairy, LLC, 2451 Ramona Expressway, San Jacinto, CA 92582
4. **Current Zoning & General Plan Designation**: RR (Rural Residential) & VLDR (Very Low Density Residential)
5. **Proposed Zoning & General Plan Designation:** Residential, Low Density (RL), pursuant to the Zoning Map (San Jacinto 2012). Low Density Residential (LDR) (2.0 to 7.0 Dwelling Units per Acre), pursuant to the General Plan Land Use Policy Map (San Jacinto 2022).
6. **Proposed Project:** Ramona Dairy, LLC ("Applicant") proposes to develop approximately 75.70 acres of vacant land with up to 419 detached single-family homes and associated infrastructure and amenities to serve the residential community ("Project"). The development would include the construction of homes, four expansive active parks and amenities that will feature, pickle ball, shade structures, picnic tables, BBQs, and multiple play structures. Four water quality/stormwater detention basins, internal streets and sidewalks, bike lanes, landscaping, signage, and utility improvements to serve the site. Offsite improvements include street and sidewalk connections along the frontage of W. 7th St., Cawston Ave., and W. Esplanade Ave.

PLANNED DEVELOPMENT PERMIT PROCEDURAL GUIDELINES

1. All development within the PDP shall comply with the requirements and standards set forth in this document. In some cases, this PDP provides direct references to the City of San Jacinto Development Code, and where this PDP is silent, the City of San Jacinto Development Code will provide additional guidance. Where a conflict exists between standards contained herein and those found in the City of San Jacinto Development Code, the standards in this document shall apply.

2. The Director shall require the posting of cash, a savings and loan certificate, or a performance bond issued by a corporate surety company, in an amount to be determined by the City Engineer, in compliance with Section 17.660.070 (Performance Guarantees), to cover the costs of the public improvements adjacent to the proposed development before the issuance of the Building Permit for the first phase of construction.

3. The Development Schedule is anticipated as follows:
    a. Final Engineering: Complete March 2026
    b. Grading Start: April 2026
    c. Home Construction Start: January 2027
    d. Final Closing: May 2031

4. All modifications to PDP must follow City of San Jacinto Develop Code, Section 17.620.070 – Planned Development Permit Amendment.

5. All development timing/scheduling shall be in tandem with Tentative Tract Map 39076 and shall not supersede Planning Commission Approvals.

    a. The development schedule for a Planned Development Permit shall indicate the approximate time period, after the Planned Development Permit becomes effective, when construction of the project can be expected to begin, the anticipated rate of development, and the anticipated completion date. If approved by the Commission, shall become a part of the Planned Development Permit and shall be adhered to by the owner of the property and the owner's successor(s)-in-interest.

    b. "NOTE: The Director shall require the posting of cash, a savings and loan certificate, or a performance bond issued by a corporate surety company, in an amount to be determined by the City Engineer, in compliance with Section 17.660.070 (Performance Guarantees), to cover the costs of the public improvements adjacent to the proposed development before the issuance of the Building Permit for the first phase of construction."

CHACON FARMS

c. The developer shall construct all amenities shown and landscape all open spaces within each phase as it is completed, and before occupancy of any structure located within each phase of the development."

6. Landscaping Open Space Timing:
   a. Lot A & Lot B shall be completed with Phase 1, please see Exhibit D Phasing Plan.
   b. Lot D shall be completed with Phase 3, please see Exhibit D Phasing Plan.
   c. Lot C shall be completed with Phase 4, please see Exhibit D Phasing Plan.

7. Landscape Guideline:
   a. a. "The landscape guidelines and proposed landscape plans provided herein are additional guiding principles to ensure compatibility within the development, with surrounding areas and Citywide guidelines. However, all landscaping must abide by the City of San Jacinto's Water Efficient Landscape and Irrigation Standards found in Chapter 17.325 at minimum, and wherever these guidelines are silent, the Citywide Landscape Guidelines will provide additional guidance. Proposed plant species cannot be listed on the California Invasive Plant Council (CAL-IPC) Invasive Species Inventory or the Multiple Species Habitat Conservation Plan (MSHCP) Invasive Plant List."

PROJECT ATTRIBUTES & JUSTIFICATION FOR DENSITY INCENTIVE AND PLANNED DEVELOPMENT PERMIT

The Project has been a collaborative effort with City staff to design a high-quality residential community with modified standards and density incentives to help address the regions need for attainable homes and the critical housing shortage in California. The project conforms to the City's General Plan and Zoning Designation, but requires slight modifications to Development Code Standards.

As part of the coordination local issues and constraints were improved:

- **Issue:** Pedestrian connectivity.
  Improvement: Installation of sidewalks connecting 7th St and Esplanade Ave.

- **Issue:** Increased park and open space above typical Development Code Standards
  Improvement: Provide spaces for event programing, including multiple parks, pickle ball, shade structures, BBQs, picnic tables, and open space.

Findings:

- **Finding:** Be consistent with the purpose, intent, goals, policies, actions, and land use designations of the General Plan and any applicable specific plan.
  - **Justification:** The proposed Master Planned Residential Community provides a total of 419 residential units with a variety of single-family options to accommodate buyers of diverse incomes. It provides a variety of housing styles, layouts, and other characteristics that may be suited to the growing population of San Jacinto. The Proposed Project's contribution to housing needs of the local workforce will cut commute times and improve air quality. Chacon Farms' addition of 419 residential units to San Jacinto's housing supply, will increase the City's housing capacity and will contribute to the accommodation of the City's unmet RHNA. Lots sizes will range from 4,500 square feet to 8,622 square feet.

- **Finding:** Ensure compatibility of property uses within the zone and general neighborhood of the proposed development.
- **Finding:** The design, location, operating characteristics, and size of the proposed development will be compatible with the existing and future land uses in the vicinity, in terms of aesthetic values, character, scale, and view protection; and
  - **Justification:** The Proposed Project Site is surrounded by existing residential and agricultural uses. Directly to the north, northeast, and northwest across West 7th Street and to the east across Cawston Avenue North, are existing Single-Family Residential uses. To the west, is the Esplanade Specific Plan which will include 56.7 acres of mixed-use development and 130.7 acres of single-family residential development to provide 686 single-family homes. Directly south, and across West Esplanade Avenue are agricultural uses which are located within the Jurisdiction

Attachment: Planned Development Permit (Chacon Farms (PROJ23-0029))

COPY

CHACON FARMS

of the City of Hemet. The Proposed Project will enhance the rural character, and active-lifestyle culture of the City of San Jacinto and bordering City of Hemet. Chacon Farms seeks to maintain its rural, agricultural legacy. A "farm feel" will be maintained through the use of farmhouse, craftsman and prairie architectural styles throughout the community. Architectural details will serve to reinforce the broader community design theme and work together within their broader context, thereby creating compatibility with neighboring properties and developments. Additionally, street and park names and other development details will be chosen in consistency with the Site's farm community heritage.

- **Finding:** The proposed project will produce a comprehensive development of superior quality and excellence of design (e.g., appropriate variety of structure placement and orientation opportunities, appropriate mix of structure sizes, high quality architectural design, significantly increased amounts of landscaping and improved open space, improved solutions to the design and placement of parking and loading facilities, incorporation of a program of highly enhanced amenities [e.g., additional public art], LEED or other "green" related standards, etc.) than might otherwise occur from more typical development applications;
    - **Justification:** Chacon Farms will create a unique sense of place through maintaining a "farm feel" that reinforces its agricultural legacy. Architecture of homes and other structures within residential areas and Community Parks will be consistent with the community's proposed agricultural theme. Architecture will be built in farmhouse, craftsman, and prairie styles, using quality materials such as stucco, brick, and stone, that convey a sense of permanence. A diverse set of colors will be incorporated, without deviating from the context of the broader community style or the context of each individual street. These design choices will enhance the visual attraction of the Chacon Farms community. Additionally, Community Parks featuring amenities that provide opportunity for recreation and interaction between residents will contribute to the active and social lifestyle that the proposed Community aims to promote.

- **Finding:** Proper standards and conditions have been imposed to ensure the protection of the public health, safety, and welfare;
    - **Justification:** The proposed Master Planned Residential Community substantially conforms with the General Plan and public health and public safety, as it will provide a planned layout that incorporates pedestrian safety and encourages physical activity and wellbeing. Four Community Parks, connected by a network of paths will provide numerous social and recreational opportunities for each resident.

- **Finding:** Proper on-site traffic circulation (e.g., pedestrian and vehicular) and control is designed into the development to ensure protection for fire suppression and police surveillance equal to or better than what would normally be created by compliance with the minimum setback and parcel width standards identified in Article 2 (Zones, Allowable

Attachment: Planned Development Permit (Chacon Farms (PROJ23-0029))

COPY

CHACON FARMS

Land Uses, and Zone Specific Standards);

- **Justification:** The Proposed Project's inter-connected network of thoroughfares contributes to a balanced and efficient pattern, as it will disperse traffic and provide easy access to a variety of open spaces and centers of activity within the neighborhood. Residents will have access to the Class I Multi-Use Path along Esplanade Avenue. These thoroughfares will also contribute to public services by increasing emergency response accessibility.

- **Finding:** The subject parcel is adequate in terms of size, shape, topography, and circumstances to accommodate the proposed development;
  - **Justification:** The Project Site consists of three parcels with approximately 75.70 acres of total lot area and is located west of Cawston Avenue North, northeast of Warren Road, north of West Esplanade Avenue, and south of West Seventh Street. The site is surrounded by a mixture of residential and agricultural uses. Regional access to the vicinity is provided by State Route (SR) 74, approximately 3.9 miles south of the Project Site and SR 79, approximately 5.5 miles northeast of the site.

- **Finding:** Adequate public services and facilities exist, or will be provided, in compliance with the conditions of approval, to serve the proposed development and the approval of the proposed development will not result in a reduction of public services to properties in the vicinity to be a detriment to public health, safety, and general welfare;
  - **Justification:** The Project Site is approximately 0.6 miles (a 12-minute walk), from the Riverside Transit Agency (RTA) Go Micro service zone. Go Micro is RTA's on-demand public transit service available within the Hemet-San Jacinto micro transit zone. Shared rides can be booked via the Go Micro app at user convenience, rather than relying on a predetermined bus schedule. Go Micro minibuses directly pick up and drop off passengers at desired locations, at desired times (provided both locations are within the micro transit zone and that the trip does not begin and end at route 44 bus stops). The Project Site is surrounded by W. 7th Street to the north, Cawston Avenue N. to the east, and W. Esplanade Avenue to the South. All surrounding streets will meet the City's standards based on the classifications shown in the Circulation Master Plan. Further, the Site is designed with an interconnected network of thoroughfares which helps to disperse traffic.

- **Finding:** The proposed development, as conditioned, will not have a substantial adverse effect on surrounding property or their allowed use;
  - **Justification:** The site location and design are consistent with the nearby residential uses. The project site is surrounded by existing single-family residential directly to the north, northeast, and northwest across West Seventh Street. The Chacon Farms development will add 419 Single Family Homes within the 75.70 acre site. The location of the site provides pedestrian proximity to community features and amenities such as Catalpa Park (0.3 miles), Tahquitz High School (0.7 miles), Megan Cope Elementary School (0.7 miles), Rancho Viejo Middle School (0.9 miles) and Cawston Elementary School (1.3 miles).

Attachment: Planned Development Permit (Chacon Farms (PROJ23-0029))

COPY

CHACON FARMS

Proposed Community Benefits and Attributes:

- Enhanced Open Space and Architecture Guidelines.
- Located nearby Tahquitz High School
- Strong compatibility with existing surrounding uses
- Meets or exceeds current solar energy and T-24 requirements
- 146,361.60 square feet of new parks for residents.
- New street improvements along Esplanade Avenue, Cawston Avenue, and 7th Street.
- New perimeter landscaping and street trees along Esplanade Avenue, Cawston Avenue, and 7th Street.
- New perimeter sidewalk and trails along Esplanade Avenue, Cawston Avenue, and 7th Street.

The Project has been a collaborative effort with City staff to design a high-quality residential community with modified standards and density incentives to help address the regions need for attainable homes and the critical housing shortage in California.

SITE PLANNING AND DESIGN

Quality residential subdivisions function as neighborhoods, encourage social interaction, promote healthful activities, and incorporate best practices in sustainable development planning. This section provides development standards for the planning and design of homes within the project to accomplish these goals and provide for a visually appealing, pedestrian friendly neighborhood environment.

1. Development Standards

Residential development within the Chacon Farms community shall comply with the development standards listed below:

Table 1

Lot Requirements	
Lot Area (minimum):	3,717 square feet
Lot Width (minimum):	45 feet
Lot Width Corner (minimum):	25 feet
Lot Depth (minimum):	60 feet
Lot Coverage – Structure (maximum):	60%
Lot Coverage – Impervious (maximum):	70%

Setbacks	
Front (minimum):	10 feet
Front Garage (minimum):	20 feet
Side Yard (minimum):	4 feet
Side Yard Corner (minimum):	5 feet
Rear (minimum):	10 feet
Rear with Slope (minimum):	10 feet

Buildings	
Height of Buildings (maximum):	35 feet
Size of Buildings (maximum):	4,500 square feet
Number of Stories (maximum):	Two Stories
Allowed Percentage of Units at Two Stories:	100%
FAR (maximum):	2:1

2. Plotting Guidelines

The Chacon Farms community provides for a range of home sizes, home styles and floor plans. Exhibit C Tentative Tract Map shows the overall design of the Chacon Farms community with

Attachment: Planned Development Permit (Chacon Farms (PROJ23-0029))

COPY

CHACON FARMS

the building envelopes plotted. The Chacon Farms community is comprised of a single neighborhood with a minimum lot size of 3,717 sf. See Exhibit E for Plotting Exhibit. Plotting will be finalized during the City's Design Review approval process, which includes plotting of each lot to ensure setback requirements are achieved.

Single family homes within Chacon Farms shall creatively use "architecture forward" designs, landscaping, and other innovative neighborhood design techniques to create a visually interesting street scene and identifiable neighborhood character. To encourage a diverse and visually interesting street scene, the neighborhood within the Chacon Farms community shall comply with the following guidelines:

1. A minimum of three (3) architectural elevations and three (3) floor plans are required for the community.
2. The same elevation style shall not be plotted next to itself or directly across the street.
3. All setbacks shall meet the minimum requirement listed in Table 1.

Attachment: Planned Development Permit (Chacon Farms (PROJ23-0029))

COPY

ARCHITECTURAL DESIGN GUIDELINES

These Architectural Design Guidelines convey the Chacon Farms community's architectural design theme. It is not the intent of these Guidelines to mandate that all the identified design components and elements described herein be incorporated into the actual building designs. Rather, these Guidelines serve as a "palette" of character-defining exterior elements that should be used in home design. It is expected that builders and their architects will prepare architectural building plans that substantially conform to these guidelines, while also applying creativity and innovation in response to housing design trends, homebuyer expectations, and other market conditions.

1. Design Principles

While these Architectural Design Guidelines do not expressly limit architectural styles, the styles employed in Chacon Farms should be complementary and compatible with the styles described in this document. The defining features of the selected architectural styles must be consistently implemented across the community to visually identify and differentiate each style. These Guidelines allow for both traditional/historical styles and contemporary interpretations of these styles, provided that the style's defining features can be visually identified, consistently applied, and differentiated from the character defining features of other styles implemented in the community.

The selection of architectural styles should be compatible with the massing of their floor plans; as such, a certain style should not be forced onto every floor plan if it is not compatible. By emphasizing the use of distinct and identifiable styles, these guidelines discourage monotony. Street scenes shall incorporate multiple architectural styles and should be divers as to form, massing, features, windows, front doors, materials, and colors.

2. Form and Massing

Building mass and scale are two primary design components that affect how a building is perceived. The created use of design articulation of the building's visible facades, variation of rooflines, balance of roof forms, and changes in vertical and horizontal plans reduces the perceived mass of a building.

3. Roofs

The roofline is a dominant visual element of a home. A roof's composition should allow for a clean interface with the building and the building façade. A roof's form and composition should reflect the appropriate roof pitch, characteristics, and materials that are consistent with and true to the selected architectural style and shall also not be overbearing nor give the appearance of being disjointed.

Attachment: Planned Development Permit (Chacon Farms (PROJ23-0029))

COPY
CHACON FARMS

I. Rooflines of adjacent homes shall vary to create a variety of silhouettes and ridge heights.
II. Roof pitches and colors shall vary from one house to the next, when appropriate for the architectural styles.
III. Roof materials and colors selected for an architectural style must reflect the elements that are typically used in that style.
IV. Roofing Materials shall be non-combustible.
V. Solar panels should be integrated into the roof design as an unobstructive element.

4. Garage Location and Design

To achieve attractive street scenes throughout the Chacon Farms community, particular attention must be given to the design and placement of garages.

I. Garage door style, color and design shall reflect the architectural character of the home and shall vary between adjacent homes, when appropriate. Acceptable garage door styles include, but are not limited to raised panel, recessed panel, flush panel in both roll-up and carriage swing door designs.
II. Window shall be incorporated into the garage door design. Garage door window styles shall correspond to the window forms of the house.
III. Architectural features, such as varied rooflines (including height and pitch) and second story setbacks, can be incorporated into the garage design to reduce building mass and scale and create a visually interesting street scene, when appropriate for the selected architectural style.
IV. Landscaping can be introduced to soften the visual impact of the garage door and accent the garage facade.

5. Windows and Doors

Window and door details are architectural components that carry a strong visual impact through their placement and design.

I. Front door details shall be consistent with the architectural style.
II. Feature window shapes shall be consistent with the architectural style.
III. Accent shutters are not required; however, when used, shutter size shall be proportional to the window and shall reflect the architectural style.
IV. Window trim details used on the front elevation shall be applied to the sides and rear of the house for continuity.
V. Windows and/or doors with silver or gold frames or reflective glass are prohibited.

6. Building Materials and Colors

A complementary mixture of colors, textures, and building materials is encouraged throughout the Chacon Farms community. Building material and color selection are integral components in

Attachment: Planned Development Permit (Chacon Farms (PROJ23-0029))

COPY

CHACON FARMS

the definition of a specific architectural style and provide a varied streetscape design. Material breaks, transitions and termination should produce complementary and clear definition of separation while maintaining a prescribed color and material palette. A variety of exterior accent materials should be used as an integral feature in home construction to convey the selected architectural styles.

I. Color schemes shall be simple, tasteful, and consistent with architectural styles.
II. A scheme of color values on all exterior elements shall be distinct from one house to the next, with deeper tones encouraged to promote variations. This avoids a monotonous appearance of multiple buildings of the same colors and tones.

7. Enhanced Elevations

Rear elevations facing the public right of way should be architecturally enhanced with balconies, verandas, patio covers, window boxes or similar features.

8. Site Lighting

Lighting standards throughout Chacon Farms shall be similar in style, color and materials, embracing a natural and minimal lighting approach.

All outdoor lighting shall incorporate, to the extent feasible and permissible under City standards, measures to aid in reducing light pollution. Such measure include: wattage reduction, directing lighting downward, shielding lights (or using “cut-off lights” that only illuminate the side or underside of a fixture, rather than shining skyward) and lowering the height of light poles to reduce the illumination radius.

All outdoor lighting fixtures shall be focused, directed, and arranged to minimize glare and illumination of public streets and adjoining property.

Mechanical Equipment

Mechanical equipment such as air conditioners, heaters, evaporative coolers, and other such devices shall not be mounted on any roof and must be located behind privacy walls or landscaping.

LANDSCAPE DESIGN GUIDELINES

These Landscape Design Guidelines articulate the various landscape design components of Chacon Farms thematic identity. The community's landscape theme draws from the rural, agricultural heritage of the San Jacinto area.

As demonstrated by Exhibit B, Conceptual Landscape Plan, the landscape concept is intended to create a sense of community identity that links together Chacon Farms' residential land uses. Furthermore, the recommended plant palette is designed to reinforce and emphasize the community's landscape theme at major focal points.

Although a great deal of specific design information is provided in these Landscape Design Guidelines, these Guidelines are not intended to establish a set of rigid landscaping requirements for the Chacon Farms community. Instead, these Guidelines provide landscape principals and standards to ensure that plant materials, streetscapes community wall and fences are compatible with the community's design theme. These Guidelines are intended to be a living document and, as such, are subject to modification over time to allow for creative and innovative responses to unanticipated conditions, such as changes in housing design trends or community desires.

A. Plant Palette

The plant palette for Chacon Farms complements and enhances the community's setting, while also reducing irrigation needs and conserving water resources. The plant palette includes colorful plant materials along with trees appropriate for the property's climatic conditions. The plant palette also emphasizes other design elements in the community, such as the recommend architectural styles, monumentation sign, walls and fences, etc. Many of the plant materials are water efficient species native to Southern California or naturalized to the arid Southern California climate.

The plant palette provides a list of the plant materials approved for use in the Chacon Farms' community. The plans listed in the plant palette provide a base palette for the community's landscape design. Other similar plant materials may be substituted provided the selected plant materials are water-efficient and complement the Chacon Farms community theme. Plant selection for specific areas of the community shall have similar watering requirements so that the irrigation systems can be designed to minimize water us and plant materials can thrive under optimal conditions.

B. Walls & Fences

The conceptual Wall and Fence Plan for the Chacon Farms community is illustrated on Exhibit B. As shown, a variety of walls and fences are provided throughout the community to minimize roadway noise, increase privacy within each residential lot, and increase safety along the existing streets. Community walls and fences are designed as an integral component and

Attachment: Planned Development Permit (Chacon Farms (PROJ23-0029))

COPY

CHACON FARMS

extension for the building designed and surrounding landscape. Gates should be complementary in style and color to its fence or wall.

Decorative Block Wall. Decorative block walls are located between roadways and residential lots to maximize privacy and provide noise attenuation. The decorative block wall shall be up to six feet (6') tall (from the resident's yard finish grade elevation). Corner returns shall be decorative block wall.

Privacy fences are provided in the rear and side yards of residential lots that do not have masonry walls. These privacy fences are vinyl. A minimum and maximum of six feet (6') tall.

B. Amenities

The community includes multiple new ways for residents to connect with the surrounding community include new sidewalks/trails along the perimeter streets and new pedestrian routes between Seventh Street, Cawston Avenue, and Esplanade.

The four HOA maintained parks include amenities such as pickleball court, shade structures, picnic tables, playgrounds, open space, walkways, benches, and BBQs.

1. Purpose and Scope

Richard Michael (Applicant) is proposing the Chacon Farms Project (Tentative Tract Map 39076) to subdivide 75.7 gross acres into 419 single family residential lots, four open space lots, and new roadways (Proposed Project). The Proposed Project Site is currently comprised of agricultural lands and is bounded by W. Seventh Street on the north, W. Esplanade Avenue on the south, Cawston Avenue North on the east, and a planned development on the west. The Proposed Project Site is identified as Assessor Parcel Numbers (APNs) 432-260-009, -026, and -027.

The Proposed Project is subject to approval of the following entitlements:

- Per San Jacinto Development Code ("SJDC") Section 17.720.020, a General Plan Amendment to revise the land use designation from VLDR (Very Low Density Residential) to LDR (Low Density Residential) for the Proposed Project Site located at 710 Cawston Avenue North (APNs 432-260-009, 432-260-026, and 432-260-027);
- Per SJDC Section 17.720.020, a Zoning Map Amendment (Zone Change) from the RR Zone (Rural Residential) to the LDR Zone (Residential – Low Density) for the Proposed Project Site;
- Per SJDC Section 17.620, a Planned Development Permit (PDP);
- Per SJDC Section 17.630.040 approval of Site Plan and Design Review;
- Per San Jacinto Municipal Code ("SJMC") Section 16.25 a Tentative Tract Map (TTM 39076) for the subdivision of the Proposed Project Site into 419 residential lots (for the development of 419 single family homes) and 4 lettered lots.

The Proposed Project is a project under the California Environmental Quality Act (Public Resources Code Section 21000 et seq.: "CEQA"). The primary purpose of CEQA is to inform the public and decision makers as to the potential impacts of a project and to allow an opportunity for public input to ensure informed decision-making. CEQA requires all state and local government agencies to consider the environmental effects of projects over which they have discretionary authority. CEQA also requires each public agency to mitigate or avoid any significant environmental impacts resulting from the implementation of projects subject to CEQA.

Pursuant to Section 15367 of the CEQA Guidelines, the City of San Jacinto (City) is the lead agency for the Proposed Project. The lead agency is the public agency that has the principal responsibility for conducting or approving a project. The City, as the lead agency for the Proposed Project, is responsible for preparing environmental documentation in accordance with CEQA to determine if approval of the discretionary actions requested and subsequent development of the Proposed Project would have a significant impact on the environment.

In accordance with the California Environmental Quality Act (CEQA) (Public Resources Code Section 21000-21178.1), this Initial Study has been prepared to analyze the Proposed Project to determine any potential significant impacts upon the environment that would result from construction and implementation of the Proposed Project. In accordance with California Code of Regulations, Section 15063, this Initial Study is a preliminary analysis prepared by the Lead Agency in consultation with other jurisdictional agencies, to determine whether a Negative Declaration, Mitigated Negative Declaration, or an Environmental Impact Report is required for the Proposed Project. The purpose of this Initial Study is to inform the decision-makers, affected agencies, and the public of potential environmental impacts associated with the implementation of the Proposed Project.

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

COPY

A Lead Agency may prepare a Mitigated Negative Declaration for a project that is subject to CEQA when an Initial Study has identified potentially significant effects on the environment, but (1) revisions in the project plans or proposals made by, or agreed to by, the Applicant before the proposed Negative Declaration and Initial Study are released for public review would avoid the effects or mitigate the effects to a point where clearly no significant effect on the environment would occur, and (2) there is no substantial evidence in light of the whole record before the public agency that the project, as revised, may have a significant effect on the environment (Public Resources Code Section 21064.5).

This Initial Study has been prepared for the Proposed Project, in conformance with Section 15070(b) of the CEQA Guidelines. This Initial Study analyzes potentially significant impacts associated with the Proposed Project and incorporates mitigation measures into the Proposed Project as necessary to eliminate the potentially significant effects of the Proposed Project or to reduce the effects to a level of less than significant.

1.1 Content and Format of the Initial Study

The Initial Study is organized as follows:

- **Section 1 – Purpose and Scope.** This section introduces the scope of the Proposed Project and the City's role in the project, as well as a brief summary of findings.
- **Section 2 – Project Summary and Environmental Determination.** This section summarizes the Proposed Project and actions to be undertaken by the City. This section also provides the determination of the environmental document to be approved by the City.
- **Section 3 – Project Description.** This section details the Proposed Project components and general environmental setting.
- **Section 4 – Environmental Impacts**. This section contains the Environmental Checklist Form, as suggested in Section 15063(d)(3) of the CEQA Guidelines, as amended, and includes a series of questions about the project for each of the listed environmental topics. The Form evaluates whether or not there would be significant environmental effects associated with the development of the project and provides mitigation measures, when required, to reduce impacts to a less than significant level. The form requires an analysis in 20 subject categories as well as Mandatory Findings of Significance.
- **Section 5 – List of Preparers.** This section identifies the names and affiliations of the individuals who contributed to the preparation of the environmental evaluation.
- **Section 6 – References.** This section identifies the references used in the preparation of this Initial Study.

1.2 Initial Study Summary of Findings

Based on the analysis in Section 4, there were no environmental factors that could potentially affect ("Potentially Significant") the environment. Mitigation measures were identified to reduce some impacts to Less Than Significant. Therefore, the determination, based on the Initial Study, is that a **Mitigated Negative Declaration** would be prepared.

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

COPY

1.3 Documents Incorporated by Reference

The following reports and/or studies are applicable to analysis of the development of the Project Site and are hereby incorporated by reference:

- *Envision San Jacinto, General Plan 2040* (City, November 15, 2022). (Available at https://www.sanjacintoca.gov/city_departments/community-development/general-plan
- *Public Review Draft, Environmental Impact Report for the San Jacinto General Plan Update (SCH: 2020120312),* July 2022, prepared by De Novo Planning Group (City, 2022a) Available at: https://sanjacinto.generalplan.org/documents-amp-maps
- *Administrative Draft Initial Study and Mitigated Negative Declaration, Chacon Farms Project, PROJ23-0029*, prepared by Psomas, April 2024. This document assessed the potential environmental impacts of a previous design for the Project, known as Vesting Tentative Tract Map 38787 that identified 210 single family residences and 430 townhomes on 75 gross acres/50.13 net acres, requiring a General Plan Amendment from Very Low Density to Medium Density and a Zone Change from Rural Residential to Residential-Medium Density. The Administrative Draft Initial Study was prepared for City of San Jacinto as a draft analysis and is on file with the City of San Jacinto Planning Division. Since the preparation of the Administrative Draft Initial Study in April 2024, the Project design was modified to the current Project, known as Tentative Tract Map 39076 that identifies 419 single family residences and four open space lots on approximately 75 gross acres, requiring a General Plan Amendment from Very Low Density Residential to Low Density Residential and a Zone Change from Rural Residential to Residential-Low Density. Most of the environmental analysis prepared for the original Project design is unchanged for the analysis of the current Project design; however, the modified Project required a re-evaluation of studies in the categories of hydrology, noise, and transportation. Because the air quality, energy, and greenhouse gas emissions were assessed on a more intensive project design and found to be less than significant, these studies were not revised; therefore, the data from the more intensive project design was utilized for the analysis of the current Proposed Project.
- *P22-079 – Revision to Esplanade Specific Plan and TTM32955:* A proposal to revise approved Tentative Tract Map 32955, phases 32955-2, -3,-4 within Planning Areas 1, 3, 5, 7 and 8 of the Esplanade Specific Plan for 852 single-family residential lots and one,+/-36.1-acre mixed use lot with capacity for 194 multi-family units. The project includes an amendment to approved SP 01-02 (the Esplanade Specific Plan) and revisions to several improvements to match and support revisions to the associated tract map. Environmental: Initial Study. These documents are available for review at the City of San Jacinto Planning and Building Division, 595 South San Jacinto Avenue, San Jacinto, CA 92583.

Existing: Very Low Density Residential (VLDR)
Proposed: Low Density Residential (LDR)

7. Zoning Designation:
Existing: Rural Residential (RR)
Proposed: Residential, Low Density (RL)

8. Description of Project:

Richard Michael (Applicant) is proposing the Chacon Farms Project (Tentative Tract Map 39076) to subdivide 75.7 gross acres into 419 single family residential lots, four open space lots, and new roadways within agricultural lands bounded by W. Seventh Street on the north, W. Esplanade Avenue on the south, Cawston Avenue North on the east, and a planned development on the west. The Proposed Project Site is identified as Assessor Parcel Numbers (APNs) 432-260-009, -026, and -027. The purpose of the Project is to obtain entitlements that would enable the subdivision of the property, which would ultimately provide additional housing options to serve the growing population of the City of San Jacinto. The Project requires a General Plan Amendment and Zone Change to increase allowed housing density.

9. Surrounding Land Uses:

Surrounding land uses are identified in **Table 1 – Surrounding Land Use**. The Project Site is currently occupied by Chacon Farms and Bruno Ranches agricultural operations. Two single-family residential uses occupied by caretakers are also located on the Proposed Project Site.

COPY

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

Table 1: Surrounding Land Use

Location	Land Use	Zoning
Project Site	Chacon Farms and Bruno Ranches agricultural operations	RR (Rural Residential)
North	West Seventh Street followed by a single-family residential development and Catalpa Park	RL (Residential, Low Density);
South	West Esplanade Avenue followed by GH Dairy Farm (1455 Cawston Avenue North) and Ridgely Farms (3901 West Esplanade Avenue), located in the City of Hemet city limits (which begins on the south of West Esplanade Avenue)	City of Hemet, A2 (Heavy Agriculture)
East	Cawston Avenue North followed by single-family residences and horse farms/ranches	RR (Rural Residential)
West	Vacant lands/under construction for planned development	Esplanade Specific Plan SP 01-02 (mixed use single family residential and commercial subdivision under construction)

Sources: Google Earth Imagery; City of San Jacinto Zoning Map; City of Hemet Zoning Map

10. Other Public Agencies Whose Approval is Required:

The following discretional approvals are required for the Project:

State Agencies:

- Santa Ana Regional Water Quality Control Board: approval of a National Pollutant Discharge Elimination System (NPDES) permit to ensure that construction site drainage velocities are equal to or less than the pre-construction conditions and downstream water quality is not worsened.

11. California Native American Consultation

On February 22, 2024, the City of San Jacinto notified via email the following tribal entities of the Project and requested a timeframe in which to request consultation in accordance with AB52 and SB18. The following summarizes the results of the AB52 consultation.

- Soboba Band of Luiseño Indians. Result: Mitigation measures requested to manage unanticipated tribal resources. Consultation concluded.
- Rincon Band of Luiseño Indians. Result: No potential tribal resources. Consultation concluded.
- Yuhaaviatam of San Manuel Nation. Result: the Project site was outside of Serrano ancestral territory. Consultation concluded.
- Agua Caliente Band of Cahuilla Indians (ACBCI). Result: Letter dated February 26, 2024 requested formal consultation and more information identified in the Cultural Resources Report. Letter received April 21, 2025 stating the Project site is outside of the boundaries of the ACBCI Reservation, but within the tribe's traditional use area. ACBCI deferred to Soboba for this Site. Consultation concluded.

Mitigation measures to ensure resources to tribal cultural resources are minimized have been incorporated, as appropriate, into the Initial Study.

COPY

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

2.2 Environmental Analysis and Determination

In accordance with the California Environmental Quality Act (CEQA) (Public Resources Code Section 21000-21178.1), this Initial Study has been prepared to analyze the Proposed Project to determine any potential significant impacts upon the environment that would result from construction and implementation of the Project. This Initial Study is based on an Environmental Checklist Form (Form), as suggested in Section 15063(d)(3) of the CEQA Guidelines, as amended, and includes a series of questions about the project for each of the listed environmental topics. The Form evaluates whether or not there would be significant environmental effects associated with the development of the project and provides mitigation measures, when required, to reduce impacts to a less than significant level.

In accordance with California Code of Regulations, Section 15063, this Initial Study is a preliminary analysis prepared by the Lead Agency in consultation with other jurisdictional agencies, to determine whether a Negative Declaration, Mitigated Negative Declaration, or an Environmental Impact Report is required for the Proposed Project. The purpose of this Initial Study is to inform the decision-makers, affected agencies, and the public of potential environmental impacts associated with the implementation of the Proposed Project.

2.2.1 Organization of Environmental Analysis

Section 4 provides a discussion of the potential environmental impacts of the Project. The evaluation of environmental impacts follows the questions provided in the Form provided in the CEQA Guidelines.

2.2.2 Evaluation of Environmental Impacts

A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to the project (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).

All answers must take account of the whole action involved, including off site as well as on site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.

Once the Lead Agency has determined that a particular physical impact may occur, the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation incorporated, or less than significant.

"Potentially Significant Impact" is appropriate if there is substantial evidence that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.

"Less Than Significant with Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less Than Significant Impact." Mitigation measures are identified and explain how they reduce the effect to a less than significant level (mitigation measures may be cross-referenced).

Earlier analyses may be used where, pursuant to the Program EIR or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. (CEQA Guidelines Section 15063[c][3][D]. In this case, a brief discussion should identify the following:

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

COPY

a) Earlier analyses used where they are available for review.

b) Which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards and whether such effects were addressed by mitigation measures based on the earlier analysis.

c) The mitigation measures that were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project for effects that are "Less than Significant with Mitigation Measures Incorporated.

References and citations have been incorporated into the checklist references to identify information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document, where appropriate, include a reference to the page or pages where the statement is substantiated.

Source listings and other sources used, or individuals contacted are cited in the discussion.

The explanation of each issue should identify:

a) The significance criteria or threshold, if any, used to evaluate each question

b) The mitigation measure identified, if any, to reduce the impact to less than significant.

2.2.3 Environmental Factors Potentially Affected

Based on the analysis in Section 4, the Proposed Project could potentially affect ("Potentially Significant") the environmental factor(s) checked below. The following pages present a more detailed checklist and discussion of each environmental factor and identifies where mitigation measures would be necessary to reduce all impacts to less than significant levels.

☐ Aesthetics	☐ Agriculture and Forestry Resources	☐ Air Quality
☒ Biological Resources	☒ Cultural Resources	☐ Energy
☒ Geology and Soils	☐ Greenhouse Gas Emissions	☒ Hazards and Hazardous Materials
☐ Hydrology and Water Quality	☐ Land Use and Planning	☐ Mineral Resources
☒ Noise	☐ Population and Housing	☐ Public Services
☐ Recreation	☐ Transportation	☒ Tribal Cultural Resources
☐ Utilities and Service Systems	☐ Wildfire	☒ Mandatory Findings of Significance

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

COPY

2.2.4 Determination

On the basis of this initial evaluation, the following finding is made:

	The Proposed Project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
X	Although the Proposed Project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the Project have been made by or agreed to by the Project proponent. A **MITIGATED NEGATIVE DECLARATION** will be prepared.
	The Proposed Project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
	The Proposed Project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
	Although the Proposed Project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the Proposed Project, nothing further is required.

3. Project Description

3.1 Project Setting

3.1.1 Site Location

The Proposed Project Site is located at 710 Cawston Avenue North in the City of San Jacinto, County of Riverside, between Seventh Street to the north and Esplanade Avenue to the south. The Proposed Project Site is also bordered by the City of Hemet to the south. The San Jacinto Mountains are located to the east and the Lakeview Mountains are located to the west of the Proposed Project Site. Refer to **Figure 1: *Reginal Vicinity*** and **Figure 2: *Site Location - Aerial View***. The Project includes three lots associated with Assessor's Parcel Numbers (APNs) 432-260-009, -026, and -027 and is comprised of 75.7 gross acres.

Local vehicular access to the Proposed Project Site is provided by existing driveways located on Seventh Street to the north and Cawston Avenue to the east, which are both classified as major roadways. Regional access is provided by State Route (SR) 74, approximately 3.9 miles south of the Proposed Project Site and SR-79, approximately 5.5 miles northeast of the site.

The Proposed Project Site is within the *Lakeview U.S. Geological Survey* (USGS) 7.5-minute topographical map in Sections 31, 32, Township 4 South, Range 1 West at an elevation of approximately 1,511 feet above mean sea level **(Figure 3: *Site Location - USGS).*** The topography of the site is relatively planar with a very gentle fall toward the east.

3.1.2 Existing Site Conditions

The Proposed Project Site is occupied by Chacon Farms and Bruno Ranches agricultural operations. Two single-family residential uses occupied by caretakers are also located on the Proposed Project Site. Onsite operations consist of the cultivation of alfalfa and routine facility maintenance. In addition to the residences and alfalfa crops, the Proposed Project Site is also improved with a capped irrigation well, cattle corrals, irrigation infrastructure, two septic systems, asphalt pavement beneath the storage barns, a grain storage vessel, concrete driveway, and unpaved roads that surround and bisect the Proposed Project Site. Additionally, a detention basin is located on the northwest portion of the Proposed Project Site.

3.1.3 Existing Utilities

Water

Water is provided to the Proposed Project Site by the Eastern Municipal Water District (EMWD), which provides potable water, recycled water, and wastewater services to an area of approximately 555 square miles in western Riverside County. Local supplies include recycled water, potable groundwater, and desalinated groundwater, and imported supplies from the Metropolitan Water District of Southern California (Metropolitan), which comprises about half of the water used in EMWD's service area, is provided by EMWD.

There are multiple domestic water mains in each of the streets surrounding the Proposed Project Site. Water mains range in size from 2 to 30 inches in Cawston Avenue North and West Esplanade Avenue. A 12-inch main runs the improved length of West Seventh Street. Fire hydrants are located along Cawston Avenue North and West Seventh Street. There is a 24-inch recycled water main running north to south in Cawston Avenue North.

Wastewater

The City Public Utilities Department owns and operates the sewage collection system. Sewage is treated by the San Jacinto Valley Regional Water Reclamation Facility, located at 770 N Sanderson Avenue, San Jacinto,

COPY

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

approximately 1 mile north of the Proposed Project Site. There is a 24-inch gravity sanitary sewer running north in Cawston Avenue North and then east on West Seventh Street. There is also a 20-inch EMWD sewage force main running along Proposed Project Site's eastern property line within a 14-foot easement.

Stormwater

The development of the Project site will result in an increased area of impervious surfaces, including roofs, asphalt, concrete, sidewalks, and driveways. The property's natural drainage pattern directs flow toward the northwest, and this orientation has been incorporated into the project's grading design. Each lot will drain through vegetated swales to the adjacent streets. Stormwater from the streets will be conveyed to onsite bioretention basins for preliminary treatment. Should the volume of stormwater exceed basin capacity, excess runoff will be managed by an onsite storm drain system, which will divert additional flow to a retention basin located at the northwest corner of the property.

The stormwater retention basin described above has been designed to address the incremental increase in runoff volume resulting from development for the 100-year, 24-hour storm event. Any runoff exceeding the mitigation volume will be conveyed to Seventh Street via a curb outlet structure. Subsequently, the stormwater will travel approximately 1,786 feet west through a force main line to an existing catch basin. The construction of the force main line will occur within the area designated for street improvements along Seventh Street, as established by Tract No. 32955 and addressed in the CEQA documentation approved for that project.

Power

San Jacinto Power provides electricity to the City and surrounding areas, including the Proposed Project Site. Existing overhead electric lines run along the east side of Cawston Avenue North with several guy poles on the Proposed Project Site buttressing service lines running east. Overhead transmission and distribution lines run east to west on the southern side of West Esplanade Avenue. Existing residences on the Proposed Project Site are served by an overhead line from Cawston Avenue North and a service pole near the residences. All other power is underground in West Seventh Street.

Telecommunications

Telecommunications providers within the site vicinity include Frontier, Verizon, and AT&T for telephone services and Charter and Crown-Castle for cable services. There are existing facilities in Cawston Avenue North adjacent to the site.

3.1.4 Planning Context

The Proposed Project Site has a General Plan land use designation of VLDR (Very Low Density Residential). The Proposed Project Site is currently zoned Rural Residential, which according to the San Jacinto Development Code Section 17.215.010, is applied to areas appropriate for detached single-family dwelling units with appropriate accessory structures and uses in a semirural setting. The Rural Residential zone may also allow mobile and modular homes, public facilities, and other uses that are compatible with rural single-family neighborhoods. Horses and other farm animals are also allowed in this zone in compliance with Section 17.430.050 (Animal Keeping). This zone allows a maximum density of 2.0 dwelling units per gross acre of land. The Rural Residential zone is consistent with the VLDR land use designation of the General Plan.

3.2 Project Characteristics

3.2.1 Site Plan

The Project involves subdividing 75.7 gross acres into 419 single family residential lots, four open space lots (Tentative Tract Map 39076), as shown on **Figure 4: *Site Plan Schematic, TTM 30926.*** The lots generally range

COPY

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

in size from 4,500 square feet (SF) to 6,500 SF as shown in **Appendix I: Planned Development Permit**. The community would be connected by an internal roadway network gaining access via Cawston Avenue, Seventh Street and Esplanade Avenue. Proposed on-site pedestrian trails and paths would provide access to the range of residential types within the community, as well as open spaces, parks, and a neighborhood park with a clubhouse and associated amenities, as described further below. Four lettered lots totaling 6.6 acres would be set aside for dual use as both landscaped stormwater control basins and picnic/greenspace areas connected with trails. The total Project area would equate to 75.7 acres.

3.2.2 Off-Site Improvements:

The Project involves improvements within the public right-of-way (ROW), such as street dedications and improvements, sidewalks and landscaping along West Seventh Street and Cawston Avenue, and sidewalks and landscaping along West Esplanade Avenue.

3.2.3 Access/Circulation

The internal vehicular circulation network would include the main road running north/south through the center of the site with ingress/egress on Seventh Street on the north and W Esplanade Avenue on the south. A local entry road is planned for Cawston Avenue that would connect to the main north/south roadway. The internal street system would primarily comprise local access roads, as shown on **Appendix I**.

3.2.4 Open Space and Parks

The Project would incorporate a variety of open space areas, including a private and public multi-use path linking key areas and providing pedestrian access throughout the Proposed Project Site. Four lots (Lot A, B, C, and D) totaling 6.61 acres are provided throughout the development that provide a combination of detention basins, biofiltration and park space.

3.2.5 Landscaping

The Project would include various landscape treatments as shown in **Appendix I** which delineates major landscape treatments and identifies planting types. **Figure 5: *Concept Landscaping Plan*** provides a compilation of the landscaping plan presented in **Appendix I**. Proposed landscaped types would include trees and shrubs as shown in the Preliminary Plant Palette, included as part of the Planned Development Permit in **Appendix I**. The Landscape Plan would comply with the San Jacinto Landscape Design Guidelines (San Jacinto 2005), which includes an approved plant list. The Landscape Design Guidelines aim to retain the community's rural agricultural roots, and water wise planting (i.e. drought tolerant, native, or low-water plants) is utilized whenever possible. The Project would remove 22 existing on-site trees with diameters of 9.5 inches or greater, five of which are street trees located within the Proposed Project Site's boundary, including one Tree of Heaven (*Ailanthus altissima*) , one Lemon Tree (*Citrus limon*), two Mondell Pines (*Pinus eldarica*), one Peach Tree (*Prunus persica*), four Peruvian Pepper Tree (*Schinus molle*), four California Fan Palms (*Washingtonia filifera*) and nine Mexican Fan Palms (*Washingtonia robusta*). Removal of the trees within the public street right-of-way would require authorization from the City Council, in accordance with San Jacinto Municipal Code (SJMC) Section 12.20.050 All other tree removals during Project construction would require replacement from the Applicant and approval by the City Parks and Recreation Commission.

3.2.6 Architectural Design and Elevations

The Architectural Design Guidelines in **Appendix I** conveys the Chacon Farms community's architectural design theme. It is not the intent of the Guidelines to mandate that all the identified design components and elements described be incorporated into the actual building designs. Rather, the Guidelines serve as a "palette" of character-defining exterior elements that should be used in home design. It is expected that builders and their architects would prepare architectural building plans that substantially conform to the

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

COPY

guidelines, while also applying creativity and innovation in response to housing design trends, homebuyer expectations, and other market conditions.

3.2.7 Sustainability Features

The Project would be constructed in compliance with the latest 2022 Title 24, Part 6 Energy Code and Title 24, Part 11 California Green Building Code requirements, which mandates the inclusion of various design features meant to reduce energy consumption and promote sustainable development. These features include but are not limited to the following:

- Solar photovoltaic systems equipped on all 419 dwelling units;
- Energy storage system ready for each residential unit;
- Electric vehicle (EV) capable and EV ready parking spaces to facilitate future installation and use of EV chargers;
- Low-flow fixtures (showerheads, toilets, kitchen/bathroom faucets);
- Low water use vegetation;
- Electric heat pumps;
- Energy efficient lighting such as light emitting diode (LED) lights;
- Lighting controls such as dimmers and motion/occupancy sensors; and
- High performance windows and doors (to limit air leakage, promote thermal efficiency, and reduce the transmission of solar heat).

3.2.8 Utilities

Water

Water would continue to be provided to the Proposed Project Site by EMWD via proposed looped network lateral connections to the existing water mains in Cawston Avenue North, West Esplanade Avenue, and West Seventh Street. The Project has been preliminarily sized to meet the minimum design water pressure of 50 pounds per square inch (psi) at each proposed service point of connection and a 20-psi residual pressure for fire flows.

During final design, the Fire Marshal would confirm that fire flow from the existing and new fire hydrants meet the demand for the Proposed Project. New fire hydrants would be installed throughout the Project and at the street intersections along the Project frontages of West Seventh Street, Cawston Avenue North, and West Esplanade Avenue, per EMWD standards.

Wastewater

The Project wastewater flows would be collected via a proposed sewer system and would be conveyed to EMWD's San Jacinto Valley Regional Water Reclamation Facility, located 1 mile north of the Project Site. The Project's proposed sewer collection system has been preliminarily sized to convey the sewer flow through a proposed 8-inch sewer main line via gravity from the southern to the northeast corner of the Proposed Project Site. A proposed lift station would move wastewater from the proposed 8-inch main line to a proposed 10-inch sewer main line to be constructed within Seventh Street. The proposed 10-inch sewer main line would then connect to an existing 24-inch gravity sanitary sewer running north in Cawston Avenue North and then east on West Seventh Street. The Project has been designed to be a self-contained system that does not anticipate any future sewer input from other sources.

Stormwater Controls

The Proposed Project Site will be developed with associated improvements, including improved streets and graded slopes. The runoff from the developed condition would be collected into an on-site storm drain

COPY

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

system, which includes two upstream bioretention water quality basins, and flows to a larger stormwater basin located in the northwest corner of the Proposed Project Site. The larger stormwater basin also includes a bioretention water quality basin as well. A submerged pump would be installed at the north side of the basin to send the treated stormwater into Cawston Avenue where water would be conveyed west and off-site and continue down Seventh Street via roadside swale or gutter flow and into the existing City stormwater system, as under existing conditions.

Construction of the Proposed Project would also require the contractor to prepare a Stormwater Pollution Prevention Plan (SWPPP) as the Project Site is more than 1 acre.

3.2.9 Construction Timing

Construction activities are anticipated to begin in January 2026 and end in January 2029, with phased openings occurring as completed as early as Spring 2029. Construction activity would occur for 8 hours per day, and 5 days per week (Monday through Friday), in accordance with the City's permitted hours of construction (SJMC Section 8.40.090 *Construction activity noise regulations*). Construction stages such as demolition, site preparation, grading/excavation, building construction, paving, and architectural coating would occur as the subdivision requires as identified on Table 2: Project Construction Phasing Summary.

Construction of the proposed Project would require common construction equipment types. No pile driving would be required.

Table 2: Project Construction Phasing Summary

Construction Phase	Timing
Demolition	November 2025 – December 2025
Interior grading and road improvements	January 2026 – January 2029
Grading for basins, housing pads	January 2026 to April 2026
Off-site improvements	April 2026 – August 2026
Housing pad improvements, housing construction	September 2026 – May 2029

*Note: Some phases may overlap, as determined necessary for construction sequencing.

3.2.10 Grading Quantities

Grading activities would include an estimated 27,000 cubic yards (cy) of cut, 193,600 cy of fill, and 166,600 cy of import.

3.2.11 Best Management Practices During Construction

The following best management practices are incorporated into the Project construction specifications to identity how the Project would conform to Federal, State, and Local regulations:

- Construction Water Quality Control. Construction projects that disturb 1 acre of land or more are required to obtain coverage under the NPDES General Permit for Construction Activities (General Construction Permit), which requires the applicant to file a notice of intent (NOI) to discharge stormwater and to prepare and implement a Stormwater Pollution Prevention Plan (SWPPP). The SWPPP includes an overview of the Best Management Practices (BMPs) that would be implemented to prevent soil erosion and discharge of other construction-related pollutants that could contaminate nearby water resources. The Project is more than 1 acre, therefore, the contractor is required to provide an SWPPP. The SWPPP will also address post-construction measures for water quality protection.

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

COPY

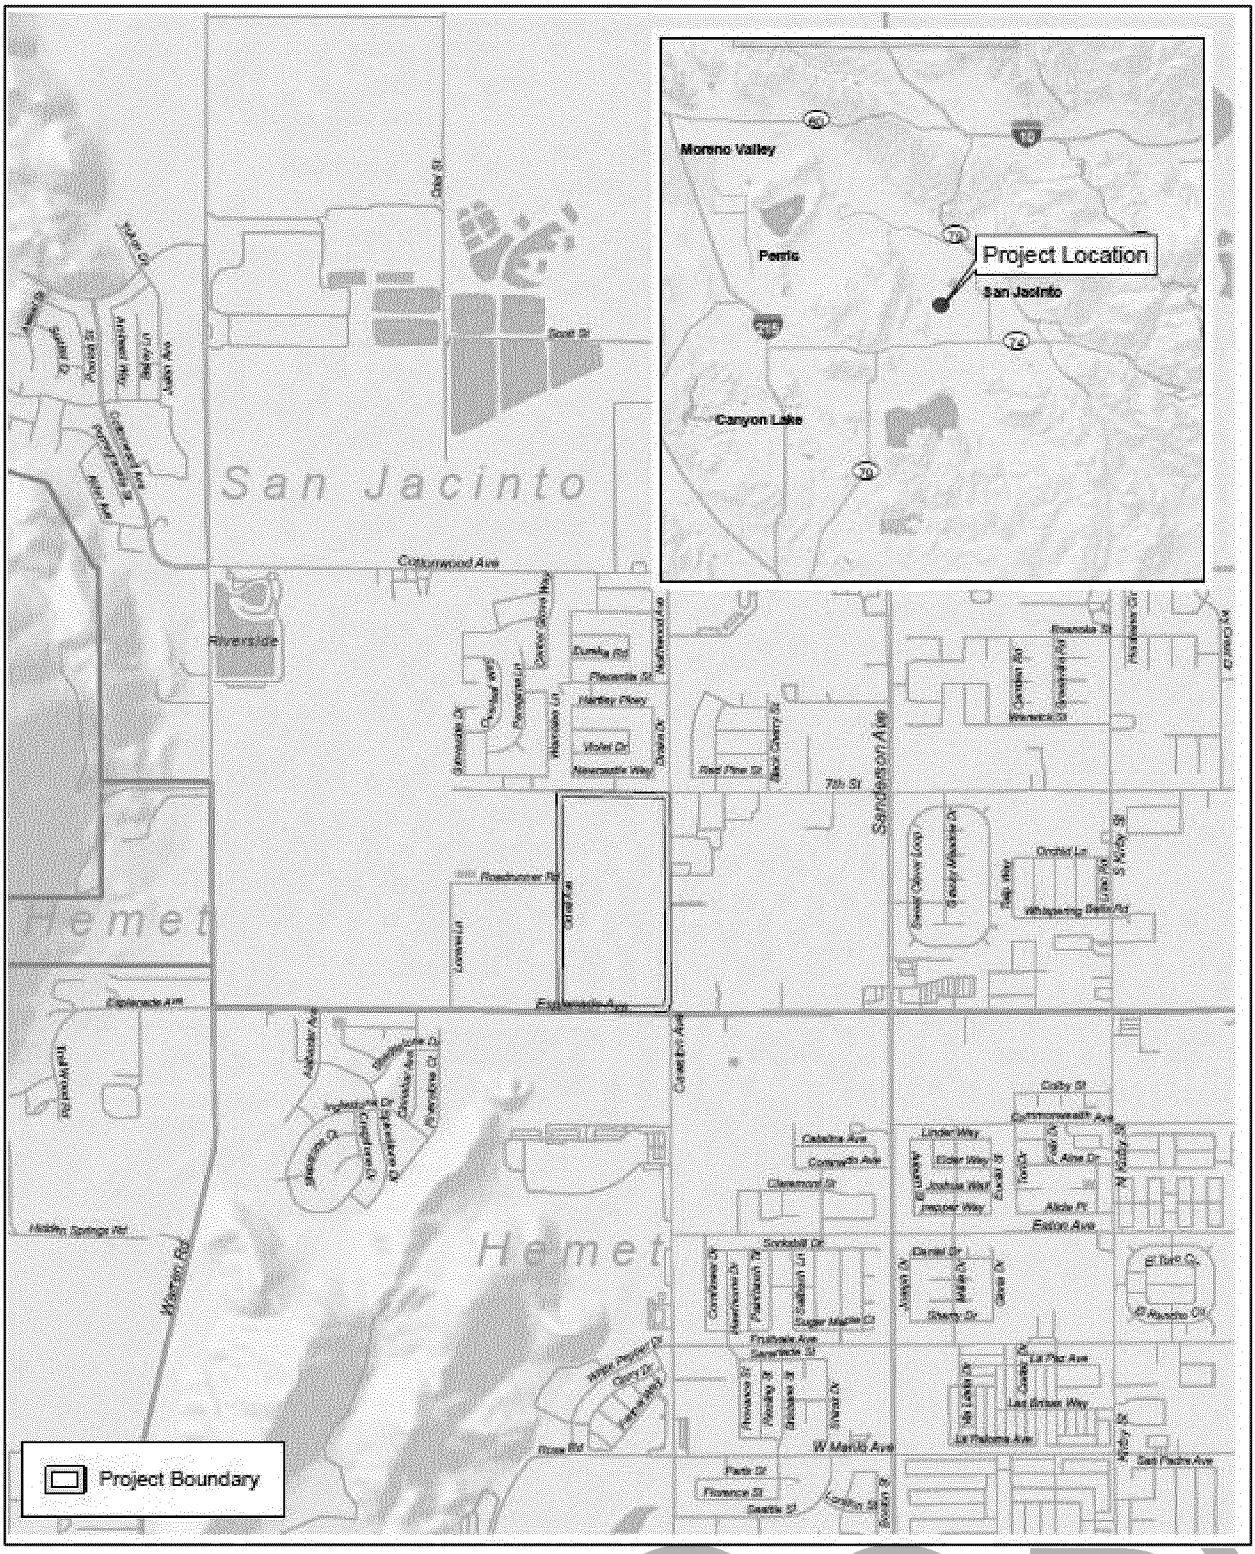
3.3 Project Characteristics - Operations

The Proposed Project would be fully operational in 2029 and would include 419 residential units for approximately 1,453 future residents within the Chacon Farms community, as discussed further in Section 4.14, Population and Housing. The proposed community aims to provide open space areas connected by a network of trails and paths between residences to provide social and recreational opportunities for future residents. A homeowners association would be formed to manage the subdivision facilities.

3.4 Project Approvals

The following approvals and permits are required from the City of San Jacinto as part of Case No. PROJ23-0029 to implement the Proposed Project:

- Per San Jacinto Development Code ("SJDC") Section 17.720.020, a General Plan Amendment to revise the land use designation from VLDR (Very Low Density Residential) to LDR (Low Density Residential) for the Proposed Project Site located at 710 Cawston Avenue North (APNs 432-260-009, 432-260-026, and 432-260-027);
- Per SJDC Section 17.720.020, a Zoning Map Amendment (Zone Change) from the RR Zone (Rural Residential) to the LDR Zone (Residential – Low Density) for the Proposed Project Site;
- Per SJDC Section 17.620, a Planned Development Permit (PDP);
- Per SJDC Section 17.630.040 approval of Site Plan and Design Review;
- Per San Jacinto Municipal Code ("SJMC") Section 16.25 a Tentative Tract Map (TTM 39076) for the subdivision of the Proposed Project Site into 419 residential lots (for the development of 419 single family homes) and 4 lettered lots.
- Per SJDC Section 17.600.090 Environmental Review and approval of the IS/MND;
- Per SJMC Section 12.20.050, removal of applicable trees within City right-of-way.



Other non-discretionary actions anticipated to be taken by the City at the staff level as part of the Proposed Project include:

- Review and approval of all off-site infrastructure plans, including street and utility improvements pursuant to the conditions of approval;
- Review all on-site plans, including grading and on-site utilities; and
- Per SJDC Section 17.600.100 approval of a Water Quality Management Plan ("WQMP").

4. Environmental Impacts

4.1 Aesthetics

4.1.1 Impact Analysis

CEQA Thresholds	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact or Does Not Apply
AESTHETICS: Except as provided in Public Resources Code Section 21099, would the project:				
a) Have a substantial adverse effect on a scenic vista?			X	
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?				X
c) In nonurbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from a publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?			X	
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?			X	

Discussion

a) Have a substantial adverse effect on a scenic vista?

Less Than Significant Impact. As stated in the San Jacinto General Plan Draft Environmental Impact Report, scenic vistas visible in the City include the Lakeview Mountains to the west, the San Jacinto Mountain foothills to the northeast, and the San Timoteo badlands to the northwest (San Jacinto 2022c). The Proposed Project Site is situated in a relatively low and flat area in the southwestern portion of the City.

Public vantage points of these scenic vistas are from Cawston Avenue and 7th Avenue. Cawson Avenue is on the east side of Project, site so views of the San Jacinto Mountains looking to the east will remain visible after development of the Project. However, views of the Lakeview Mountains looking to the west will be partially blocked by the Project post-development. The San Timoteo Badlands are not visible from Cawston Avenue or 7th Street because they are approximately 12 miles away, and views are already blocked by intervening topography and development.

From 7th Street, views of the Lakeview Mountains and San Jacinto Mountains would not be blocked by the Project because these views are visible to pedestrians and motorists traveling east and west along 7th Street, and the new structures will be located on the south side of the roadway.

Additionally, the proposed structures are limited to 40% lot coverage, a maximum height of 40 feet, and three stories tall, and would have setbacks between structures consistent with the design requirements of the SJMC. For these reasons, views of the Lakeview Mountains and Jacinto Mountains would still be visible from the internal public streets. The Project would also not significantly alter any

COPY

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

views from public parks or open space areas. Therefore, the Project would not result in a substantial adverse effect on a scenic vista, and impacts would be less than significant. No mitigation is required.

b) *Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?*

No Impact. Based on the California Department of Transportation (Caltrans) California State Scenic Highway System Map, there are no Officially Designated State scenic highways within the Project vicinity (Caltrans 2023). The closest Eligible highway is a portion of SR-74 from Interstate 5 at San Juan Capistrano to SR-111, located approximately 5 miles south of the Proposed Project Site at the nearest point[1]. Therefore, the Project Site does not exist within or near a State scenic highway. Due to distance, topographic changes, and intervening development, the Proposed Project Site is not visible from this segment of SR-74.

Additionally, none of the streets surrounding the Project Site are identified in the San Jacinto General Plan as being a local scenic roadway. The Project Site is fully disturbed with agricultural, limited residential uses, and a significant number of invasive tree species, and does not contain areas with native vegetation. The residential uses on the Project Site were found to not be historically significant (refer to Section 4.5.2 in this document).

Therefore, the proposed Project would not have an adverse effect on scenic resources (including, but not limited to, trees, rock outcroppings, and historic buildings within a State scenic highway) or a locally designated rural street or scenic corridor. There would be no impact, and no mitigation is required.

c) *In nonurbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?*

Less than Significant Impact. The Project vicinity is characterized by a mix of both non-urbanized and urbanized areas. Surrounding land uses include a mix of undeveloped, rural residential, low-density residential, and heavy agriculture uses. The Project has been designed to be consistent with the surrounding area and development. Single family homes within Chacon Farms shall creatively use "architecture forward" designs, landscaping, and other innovative neighborhood design techniques to create a visually interesting street scene and identifiable neighborhood character. As the Project has been designed to match the existing visual character within the Project vicinity context, the Project would not substantially degrade the existing visual character or quality of the site and its surroundings. Therefore, impacts would be less than significant, and no mitigation is required.

d) *Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?*

Less than Significant Impact. As stated above, the area surrounding the Project is developed with agricultural and limited residential uses that provide various levels of existing nighttime lighting. Operation of the Proposed Project would introduce new sources of residential and street lighting into the Proposed Project Site. However, the proposed lighting would be similar to the type and level of existing lighting provided in the Project vicinity and be designed to direct light downward within the Proposed Project Site to minimize spillover illumination and glare consistent with the City's Development Code Section 17.300.080 – Outdoor Light and Glare (San Jacinto 2022d). In addition, the exteriors of the proposed residential structures would be constructed of low-glare materials. No

1 (Caltrans "List of eligible and officially designated State Scenic Highways (XLS), https://dot.ca.gov/programs/design/lap-landscape-architecture-and-community-livability/lap-liv-i-scenic-highways, accessed February 9, 2025)

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

COPY

prefabricated metal buildings would be allowed, and metal would only be utilized minimally in accent features. Therefore, potential light and glare impacts would be less than significant, and no mitigation is required.

4.1.2 Mitigation Measures

No mitigation measures associated with impacts to Aesthetics apply to the Proposed Project.

4.1.3 Conclusion

There are less than significant potential impacts of the Proposed Project associated with Aesthetics, and no mitigation would be required.

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

COPY

4.2 Agriculture and Forestry Resources

4.2.1 Impact Analysis

CEQA Thresholds	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact or Does Not Apply
AGRICULTURE AND FORESTRY RESOURCES: In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:				
a) Convert Prime Farmland, Unique Farmland or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?			X	
b) Conflict with existing zoning for agricultural use or a Williamson Act contract?			X	
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?				X
d) Result in the loss of forest land or conversion of forest land to non-forest use?				X
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?			X	

Discussion

a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to nonagricultural use?

Less Than Significant Impact. Based on review of the California Important Farmland Finder Map, prepared by the California Department of Conservation, Farmland Mapping and Monitoring Program (FMMP), the Proposed Project Site is located on Prime Farmland and Farmland of Statewide Importance (FMMP 2023).

As stated in the General Plan Draft EIR, although there are existing agricultural activities within the City, the San Jacinto General Plan Land Use Map does not designate lands specifically for agricultural use. Areas identified as Prime Farmland or Farmland of Statewide Importance are mostly designated for a mix of residential and non-residential development. According to the General Plan, future development consistent with the General Plan along with changes in the economy are expected to

COPY

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

result in the conversion of many of these Prime Farmland or Farmland of Statewide Importance areas to urban uses. Because there are no exclusive agricultural land use designations included as part of the General Plan, the General Plan identifies that future development, such as the proposed Project, could convert existing agricultural resources and Prime Farmland, Unique Farmland, and Farmland of Statewide Importance to non-agricultural uses (City, 2022). Although the Project would convert areas of Prime Farmland and Farmland of Statewide Importance to non-agricultural uses, the City General Plan anticipated future development converting these uses. Therefore, impacts related to conversion of farmland would be less than significant, and no mitigation is required.

b) *Conflict with existing zoning for agricultural use, or a Williamson Act contract?*

Less Than Significant Impact. As stated above, the Proposed Project Site is located on Prime Farmland and Farmland of Statewide Importance. As stated in the City of San Jacinto General Plan Draft EIR, land use designations for these parcels allow for non-agricultural uses including mixed-use and residential. Additionally, lands within the surrounding area are identified for urban development. Because there are no exclusive agricultural land use designations included as part of the General Plan, the General Plan identified that future development, such as the Proposed Project, and changes in the economy could result in conversion of preserved agricultural properties to urban uses (City, 2022). There is no Williamson Act contract for the Proposed Project Parcels, according to the Applicant's due diligence surveys and title reports performed prior to purchase. Therefore, the Proposed Project would not conflict with existing agricultural use as the City anticipated development to convert agricultural land.

The Project would request a Zoning Map Amendment (Zone Change) per the SJDC Section 17.720.020 from RR Zone (Rural Residential) to the LDR Zone (Residential – Low Density) for the Proposed Project Site. The Project would not conflict with existing zoning for agricultural use. Therefore, impacts would be less than significant, and no mitigation is required.

c) *Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?*

No Impact. As stated in the General Plan Draft EIR, there are no forest lands within the City, nor are there suitable environmental conditions for forest land to be developed. Therefore, there are no forest lands on the Proposed Project Site and implementation of the Project would not result in the loss of forest land or convert forest land to non-forest use; no mitigation is required.

d) *Result in the loss of forest land or conversion of forest land to non-forest use?*

No Impact. As stated in the General Plan Draft EIR, there are no forest lands within the City, nor are there suitable environmental conditions for forest land to be developed. Therefore, there are no forest lands on the Proposed Project Site and implementation of the Proposed Project would not result in the loss of forest land or convert forest land to non-forest use; no mitigation is required.

e) *Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to nonagricultural use or the conversion of forest land to non-forest use?*

Less Than Significant Impact. As discussed previously, the Proposed Project site is located on Prime Farmland and Farmland of Statewide Importance. The construction and operation of the Project would be confined to the Project footprint and would not cause offsite conversion of farmland or forest land to non-agriculture uses or non-forest uses. And while the Proposed Project Site is occupied by agricultural operations ,the Proposed Project is consistent with the City's current land use and zoning for the Project Site. Additionally, General Plan Draft EIR addressed future development, such as the Proposed Project, would result in the conversion of preserved agricultural properties to urban uses

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

COPY

(San Jacinto 2022c). As the General Plan anticipated such change from Farmland to non-agricultural uses, impacts would be less than significant, and no mitigation is required.

4.2.2 Mitigation Measures

No mitigation measures associated with impacts to Agriculture and Forestry Resources apply to the Proposed Project.

4.2.3 Conclusion

There are less than significant potential impacts of the Proposed Project associated with Agriculture and Forestry Services, and no mitigation would be required.

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

4.3 Air Quality

Information and analysis in this section is derived from the documents incorporated by reference as identified in Section 1.3 of this document and the Air Quality and Greenhouse Report prepared included as **Appendix A-1 – *Chacon Farms, Air Quality, Greenhouse Gas, and Energy Impact Study,* MD Acoustics, April 28, 2025**. A Health Risk Assessment (HRA) was prepared to assess the potential health risks associated with construction of the Project within proximity to other nearby residential uses, and is included as **Appendix A-2 – *Health Risk Assessment for the Chacon Farms Project, City of San Jacinto*, MD Acoustics, April 28, 2025**.

4.3.1 Regulatory Setting

Federal Standards

The U.S. Environmental Protection Agency (EPA) is responsible for global, international, and interstate air pollution issues and policies. The EPA sets national vehicle and stationary source emission standards, oversees approval of all State Implementation Plans, provides research and guidance for air pollution programs, and sets National Air Quality Standards, also known as federal standards. There are six common air pollutants, called criteria pollutants, which were identified from the provisions of the Clean Air Act of 1970, including ozone, nitrogen dioxide, lead, particulate matter (PM10 and PM2.5), carbon monoxide, sulfur dioxide.

The federal standards were set to protect public health, including that of sensitive individuals; thus, the standards continue to change as more medical research is available regarding the health effects of the criteria pollutants. Primary federal standards are the levels of air quality necessary, with an adequate margin of safety, to protect public health.

A State Implementation Plan is a document prepared by each state describing existing air quality conditions and measures that will be followed to attain and maintain federal standards. The State Implementation Plan for the State of California is administered by the Air Resources Board (ARB), which has overall responsibility for statewide air quality maintenance and air pollution prevention. California's State Implementation Plan incorporates individual federal attainment plans for regional air districts—air district prepares their federal attainment plan, which sent to ARB to be approved and incorporated into the California State Implementation Plan. Federal attainment plans include the technical foundation for understanding air quality (e.g., emission inventories and air quality monitoring), control measures and strategies, and enforcement mechanisms.

Federal and state ambient air quality standards are summarized in **Table 3: *Ambient Air Quality Standards***.

Table 3: Ambient Air Quality Standards

Pollutant	Averaging Time	California Standards[1]		National Standards[2]		
		Concentrations[3]	Method[4]	Primary[3,5]	Secondary[3,6]	Method[7]
Ozone (O_3)	1-Hour	0.09 ppm	Ultraviolet Photometry	- -	Same as Primary Standard	Ultraviolet Photometry
	8-Hour	0.070 ppm		0.070 ppm (147 µg/m^3)		
Respirable Particulate Matter (PM10)[8]	24-Hour	50 µg/m^3	Gravimetric or Beta Attenuation	150 µ/m^3	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	20 µg/m^3		- -

Notes:

1. California standards for ozone, carbon monoxide (except 8-hour Lake Tahoe), sulfur dioxide (1 and 24 hour), nitrogen dioxide, and particulate matter (PM10, PM2.5, and visibility reducing particles), are values that are not to be exceeded. All others are not to be equaled or exceeded. California ambient air quality standards are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.
2. National standards (other than ozone, particulate matter, and those based on annual arithmetic mean) are not to be exceeded more than once a year. The ozone standard is attained when the fourth highest 8-hour concentration measured at each site in a year, averaged over three years, is equal to or less than the standard. For PM10, the 24 hour standard is attained when the expected number of days per calendar year with a 24-hour average concentration above 150 $\mu g/m^3$ is equal to or less than one. For PM2.5, the 24 hour standard is attained when 98 percent of the daily concentrations, averaged over three years, are equal to or less than the standard. Contact the U.S. EPA for further clarification and current national policies.
3. Concentration expressed first in units in which it was promulgated. Equivalent units given in parentheses are based upon a reference temperature of 25°C and a reference pressure of 760 torr. Most measurements of air quality are to be corrected to a reference temperature of 25°C and a reference pressure of 760 torr; ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.
4. Any equivalent measurement method which can be shown to the satisfaction of the ARB to give equivalent results at or near the level of the air quality standard may be used.
5. National Primary Standards: The levels of air quality necessary, with an adequate margin of safety to protect the public health.
6. National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.
7. Reference method as described by the U.S. EPA. An "equivalent method" of measurement may be used but must have a "consistent relationship to the reference method" and must be approved by the U.S. EPA.
8. On December 14, 2012, the national annual PM2.5 primary standard was lowered from 15 $\mu g/m^3$ to 12.0 $\mu g/m^3$. The existing national 24-hour PM2.5 standards (primary and secondary) were retained at 35 $\mu g/m^3$, as was the annual secondary standard of 15 $\mu g/m^3$. The existing 24-hour PM10 standards (primary and secondary) of 150 $\mu g/m^3$ also were retained. The form of the annual primary and secondary standards is the annual mean, averaged over 3 years.
9. To attain the 1-hour national standard, the 3-year average of the annual 98th percentile of the 1-hour daily maximum concentrations at each site must not exceed 100 ppb. Note that the national 1-hour standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the national 1-hour standard to the California standards the units can be converted from ppb to ppm. In this case, the national standard of 100 ppb is identical to 0.100 ppm.
10. On June 2, 2010, a new 1-hour SO2 standard was established and the existing 24-hour and annual primary standards were revoked. To attain the 1- hour national standard, the 3-year average of the annual 99th percentile of the 1-hour daily maximum concentrations at each site must not exceed 75 ppb. The 1971 SO2 national standards (24-hour and annual) remain in effect until one year after an area is designated for the 2010 standard, except that in areas designated nonattainment for the 1971 standards, the 1971 standards remain in effect until implementation plans to attain or maintain the 2010 standards are approved.
    Note that the 1-hour national standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the 1-hour national standard to the California standard the units can be converted to ppm. In this case, the national standard of 75 ppb is identical to 0.075 ppm.
11. The ARB has identified lead and vinyl chloride as 'toxic air contaminants' with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.
12. The national standard for lead was revised on October 15, 2008 to a rolling 3-month average. The 1978 lead standard (1.5 $\mu g/m^3$ as a quarterly average) remains in effect until one year after an area is designated for the 2008 standard, except that in areas designated nonattainment for the 1978 standard, the 1978 standard remains in effect until implementation plans to attain or maintain the 2008 standard are approved.
13. In 1989, the ARB converted both the general statewide 10-mile visibility standard and the Lake Tahoe 30-mile visibility standard to instrumental equivalents, which are "extinction of 0.23 per kilometer" and "extinction of 0.07 per kilometer" for the statewide and Lake Tahoe Air Basin standards, respectively.

Several pollutants listed are not addressed in this analysis. Analysis of lead is not included because the Project is not anticipated to emit lead. Visibility-reducing particles are not explicitly addressed in this analysis because particulate matter is addressed. The Project is not expected to generate or be exposed to vinyl chloride

COPY

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

because proposed Project uses do not utilize the chemical processes that create this pollutant and there are no such uses in the Project vicinity. The proposed Project is not expected to cause exposure to hydrogen sulfide because it would not generate hydrogen sulfide in any substantial quantity.

South Coast Air Quality Management District

The Proposed Project Site is located within the Southern California Air Basin (SoCAB) and is under the jurisdiction of the South Coast Air Quality Management District (SCAQMD). SCAQMD is responsible for controlling emissions primarily from stationary sources. SCAQMD maintains air quality monitoring stations throughout the basin. SCAQMD, in coordination with the Southern California Association of Governments, is also responsible for developing, updating, and implementing the Air Quality Management Plan (AQMP) for the basin. An AQMP is a plan prepared and implemented by an air pollution district for a county or region designated as nonattainment of the federal and/or California ambient air quality standards. The term nonattainment area is used to refer to an air basin where one or more ambient air quality standards are exceeded.

Every three (3) years the SCAQMD prepares a new AQMP, updating the previous plan and having a 20-year horizon.

On March 23, 2017, the California Air Resources Board (CARB) approved the 2016 AQMP. The 2016 AQMP is a regional blueprint for achieving the federal air quality standards and healthful air. The 2016 AQMP includes both stationary and mobile source strategies to ensure that rapidly approaching attainment deadlines are met, that public health is protected to the maximum extent feasible, and that the region is not faced with burdensome sanctions if the Plan is not approved or if the National Ambient Air Quality Standards (NAAQS) are not met on time. As with every AQMP, a comprehensive analysis of emissions, meteorology, atmospheric chemistry, regional growth projections, and the impact of existing control measures is updated with the latest data and methods. The most significant air quality challenge in the Basin is to reduce nitrogen oxide (NOx) emissions sufficiently to meet the upcoming ozone standard deadlines. The primary goal of this AQMP is to meet clean air standards and protect public health, including ensuring benefits to environmental justice and disadvantaged communities. Now that the plan has been approved by CARB, it has been forwarded to the EPA for its review. If approved by EPA, the plan becomes federally enforceable.

SCAQMD adopted the 2022 AQMP on December 2, 2022, to address the attainment of the 2015 8-hour ozone standard (70 parts per billion [ppb]) for South Coast Air Basin and Coachella Valley. To meet this standard, the AQMP determined NOx emissions must be reduced by 67 percent more than is required by adopted rules and regulations by 2037. The control strategy for the 2022 AQMP includes aggressive new regulations and the development of incentive programs to support early deployment of advanced technologies. The two key areas for incentive programs are (1) promoting widespread deployment of available zero-emission (ZE) and low NOx technologies and (2) developing new ZE and ultra-low NOx technologies for use in cases where the technology is not currently available. SCAQMD will prioritize distribution of incentive funding in environmental justice areas and seek opportunities to focus benefits on the most disadvantaged communities. Cost-effectiveness and affordability will be further considered during the rulemaking or incentive program development process.

The AQMP for the basin establishes a program of rules and regulations administered by SCAQMD to obtain attainment of the state and federal standards. Some of the rules and regulations that apply to this Project include, but are not limited to, the following:

- SCAQMD Rule 402 - prohibits a person from discharging from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

COPY

safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property.

- SCAQMD Rule 403 - governs emissions of fugitive dust during construction and operation activities. Compliance with this rule is achieved through application of standard Best Management Practices, such as application of water or chemical stabilizers to disturbed soils, covering haul vehicles, restricting vehicle speeds on unpaved roads to 15 miles per hour, sweeping loose dirt from paved site access roadways, cessation of construction activity when winds exceed 25 mph, and establishing a permanent ground cover on finished sites.
- SCAQMD Rule 1113 - governs the sale, use, and manufacturing of architectural coating and limits the VOC content in paints and paint solvents. This rule regulates the VOC content of paints available during construction. Therefore, all paints and solvents used during construction and operation of project must comply with Rule 1113.
- Idling Diesel Vehicle Trucks - Idling for more than 5 minutes in any one location is prohibited within California borders.
- Rule 2702 - establishes a voluntary air quality investment program from which SCAQMD can collect funds from parties that desire certified greenhouse gas (GHG) emission reductions, pool those funds, and use them to purchase or fund GHG emission reduction projects within two years, unless extended by the Governing Board.

Local Climate and Meteorology

Dominant airflows provide the driving mechanism for transport and dispersion of air pollution. The mountains surrounding the region form natural horizontal barriers to the dispersion of air contaminants. Air pollution created in the coastal areas and around the Los Angeles area is transported inland until it reaches the mountains where the combination of mountains and inversion layers generally prevent further dispersion. This poor ventilation results in a gradual degradation of air quality from the coastal areas to inland areas. Air stagnation may occur during the early evening and early morning periods of transition between day and nighttime flows. The region also experiences periods of hot, dry winds from the desert, known as Santa Ana winds. If the Santa Ana winds are strong, they can surpass the sea breeze, which blows from the ocean to the land, and carry the suspended dust and pollutants out to the ocean. If the winds are weak, they are opposed by the sea breeze and cause stagnation, resulting in high pollution events.

The annual average temperature varies little throughout much of the basin, ranging from the low to middle 60s, measured in degrees Fahrenheit (°F). With more pronounced oceanic influence, coastal areas show less variability in annual minimum and maximum temperatures than inland areas where the Proposed Project Site is located. The majority of the annual rainfall in the basin occurs between November and April. Summer rainfall is minimal and is generally limited to scattered thunderstorms in the coastal regions and slightly heavier showers in the eastern portion of the basin along the coastal side of the mountains. Year-to-year patterns in rainfall are unpredictable because of fluctuations in the weather.

Temperature inversions limit the vertical depth through which pollution can be mixed. Among the most common temperature inversions in the basin are radiation inversions, which form on clear winter nights when cold air off mountains sink to the valley floor while the air aloft over the valley remains warm. These inversions, in conjunction with calm winds, trap pollutants near the source. Other types of temperature inversions that affect the basin include marine, subsidence, and high-pressure inversions.

COPY

Local Air Quality

The SCAQMD is divided into 38 air-monitoring areas with a designated ambient air monitoring station representative of each area. The Proposed Project Site is located in the City of San Jacinto in the Hemet/San Jacinto Valley Source Receptor Area (SRA 28). The nearest air monitoring station to the Proposed Project Site is the Banning Airport Station. The Banning Airport Station is located approximately 13 miles northeast of the Proposed Project Site, at 200 South Hathaway Street, Banning. However, this location does not provide all ambient weather data. Therefore, additional data was pulled from the SCAQMD historical data for the Hemet/San Jacinto Area for both sulfur dioxide and carbon monoxide to provide the existing levels. **Table 4: *Local Area Air Quality Levels from the Banning Monitoring Stations*** presents the monitored pollutant levels within the vicinity. However, it should be noted that due to the air monitoring station distance from the Proposed Project Site, recorded air pollution levels at the air monitoring station reflect with varying degrees of accuracy, local air quality conditions at the Proposed Project Site. The monitoring data presented shows that ozone and particulate matter (PM10) are the air pollutants of primary concern in the Project area, which are detailed further in Table 4.

Table 4: Local Air Quality Levels from the Banning Monitoring Stations

Pollutant (Standard)[2]	Year		
	2020	2021	2022
Ozone:			
Maximum 1-Hour Concentration (ppm)	0.150	0.139	0.116
Days > CAAQS (0.09 ppm)	29	41	30
Maximum 8-Hour Concentration (ppm)	0.115	0.116	0.100
Days > NAAQS (0.07 ppm)	68	80	56
Days > CAAQS (0.070 ppm)	71	82	59
Carbon Monoxide:			
Maximum 1-Hour Concentration (ppm)	*	*	*
Days > NAAQS (20 ppm)	*	*	*
Maximum 8-Hour Concentration (ppm)	*	*	*
Days > NAAQS (9 ppm)	*	*	*
Nitrogen Dioxide:			
Maximum 1-Hour Concentration (ppm)	0.051	0.057	0.052
Days > NAAQS (0.25 ppm)	0	0	0
Sulfur Dioxide:			
Maximum 1-Hour Concentration (ppm)	*	*	*
Days > CAAQS (0.25 ppm)	*	*	*
Inhalable Particulates (PM10):			
Maximum 24-Hour Concentration (ug/m3)	69.3	48.6	52.4
Days > NAAQS (150 ug/m3)	0	0	0
Days > CAAQS (50 ug/m3)	1	0	0
Annual Average (ug/m3)	21.2	21.2	22.5
Annual > NAAQS (50 ug/m3)	No	No	No
Annual > CAAQS (20 ug/m3)	**Yes**	**Yes**	**Yes**
Ultra-Fine Particulates (PM2.5):			
Maximum 24-Hour Concentration (ug/m3)	46.7	40.9	37.9
Days > NAAQS (35 ug/m3)	-	-	-
Annual Average (ug/m3)	10.5	11.7	9.4
Annual > NAAQS (15 ug/m3)	No	No	No
Annual > CAAQS (12 ug/m3)	No	No	No

2 CAAQS = California Ambient Air Quality Standard; NAAQS = National Ambient Air Quality Standard; ppm = parts per million
3 No data available.

Attainment Status

The EPA and the ARB designate air basins where ambient air quality standards are exceeded as "nonattainment" areas. If standards are met, the area is designated as an "attainment" area. If there is inadequate or inconclusive data to make a definitive attainment designation, they are considered "unclassified." National nonattainment areas are further designated as marginal, moderate, serious, severe, or extreme as a function of deviation from standards. Each standard has a different definition, or 'form' of what constitutes attainment, based on specific air quality statistics. For example, the Federal 8-hour CO standard is not to be exceeded more than once per year; therefore, an area is in attainment of the CO standard if no more than one 8-hour ambient air monitoring values exceeds the threshold per year. In contrast, the federal annual PM2.5 standard is met if the three-year average of the annual average PM2.5 concentration is less than or equal to the standard. **Table 5: *South Coast Air Basin Attainment Status***, lists the attainment status for the criteria pollutants in the basin.

Table 5: South Coast Air Basin Attainment Status

Pollutant	Averaging Time	National Standards[1]	Attainment Date[2]	California Standards[3]
1979 1-Hour Ozone[4]	1-Hour (0.12 ppm)	Nonattainment (Extreme)	11/15/2010 (Not attained[4])	Extreme Nonattainment
1997 8-Hour Ozone[5]	8-Hour (0.08 ppm)	Nonattainment (Extreme)	6/15/2024	Nonattainment
2008 8-Hour Ozone	8-Hour (0.075 ppm)	Nonattainment (Extreme)	12/31/2032	
2015 8-Hour Ozone	8-Hour (0.070 ppm)	Designations Pending	~2037	
CO	1-Hour (35 ppm) 8-Hour (9 ppm)	Attainment (Maintenance)	6/11/2007 (Attained)	Maintenance
NO_2 [6]	1-Hour (100 ppb) Annual (0.053 ppm)	Attainment (Maintenance)	9/22/1998 (Attained)	Attainment
SO_2[7]	1-Hour (75 ppb)	Designations Pending	Pending	Attainment
	24-Hour (0.14 ppm) Annual (0.03 ppm)	Unclassifiable/ Attainment	3/19/1979 (Attained)	
PM10	24-Hour (150 µg/m^3)	Nonattainment (Serious)[8]	12/31/2006 (Redesignation request submitted)[8]	Nonattainment
PM2.5	24-Hour (35 µg/m^3)	Nonattainment	12/31/2006 (Redesignation request submitted)[8]	Unclassified
Lead	3-Months Rolling (0.15 µg/m^3)	Nonattainment (Partial)[9]	12/31/2015	Nonattainment (Partial)[9]

Notes:

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

Pollutant	Averaging Time	National Standards[1]	Attainment Date[2]	California Standards[3]

1 Obtained from Draft 2012 AQMP, SCAQMD, 2012. EPA often only declares Nonattainment areas; everywhere else is listed as Unclassified/Attainment or Unclassifiable.

2 A design value below the NAAQS for data through the full year or smog season prior to the attainment date is typically required for attainment demonstration.

3 Obtained from http://www.arb.ca.gov/desig/adm/adm.htm.

4 1-hour O3 standard (0.13 ppm) was revoked, effective June 15, 2005; however, the Basin has not attained this standard based on 2008-2010 data has some continuing obligations under the former standard.

5 1997 8-hour O3 standard (0.08 ppm) was reduced (0.075 ppm), effective May 27, 2008; the 1997 O3 standard and most related implementation rules remain in place until the 1997 standard is revoked by U.S. EPA.

6 New NO2 1-hour standard, effective August 2, 2010; attainment designations June, 2013; annual NO2 standard retained.

7 The 1971 annual and 24-hour SO2 standards were revoked, effective August 23, 2010; however, these 1971 standards will remain in effect until one year after U.S. EPA promulgates area designations for the 2010 SO2 1-hour standard. Area designations expected in 2012, with SSAB designated Unclassifiable/Attainment.

8 Annual PM10 standard was revoked, effective December 18, 2006; redesignation request to Attainment of the 24-hour PM10 standard is pending with U.S. EPA

9 Partial Nonattainment designation - Los Angeles County portion of Basin only.

Sensitive Receptors

Sensitive receptors are considered land uses or other types of population groups that are more sensitive to air pollution than others due to their exposure. Sensitive population groups include children, the elderly, the acutely and chronically ill, and those with cardio-respiratory diseases. For CEQA purposes, a sensitive receptor for air quality would be a location where a sensitive individual could remain for 24 hours or longer, such as residencies, hospitals, and schools (etc.). The closest existing sensitive receptors (to the site area) for purposes of air quality are existing single-family residences located approximately 100 feet to the north.

Significance Criteria

Appendix G of the CEQA Guidelines states that the significance criteria established by the applicable air quality management district may be relied upon to make significance determinations. The SCAQMD has established significance thresholds to assess the regional and localized impacts of Project-related air pollutant emissions, as shown below.

Regional Thresholds for Construction Emissions

The following CEQA significance thresholds for construction emissions are established for the Basin by the SCAQMD:

- 75 pounds per day (lbs/day) of VOC
- 100 lbs/day of NOx
- 550 lbs/day of CO
- 150 lbs/day of PM10
- 55 lbs/day of PM2.5
- 150 lbs/day of SO_2

Local Microscale Concentration Standards

The significance of localized project impacts under CEQA depends on whether ambient CO levels in the vicinity of the Project are above or below State and federal CO standards. If ambient levels are below the standards, a project is considered to have a significant impact if project emissions result in an exceedance of

COPY

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

one or more of these standards. If ambient levels already exceed a State or federal standard, project emissions are considered significant if they increase 1-hour CO concentrations by 1.0 parts per million (ppm) or more or 8-hour CO concentrations by 0.45 ppm or more. The following are applicable local emission concentration standards for CO:

- California State 1-hour CO standard of 20.0 ppm
- California State 8-hour CO standard of 9.0 ppm

Localized Significance Thresholds

Project-related construction air emissions may have the potential to exceed the State and Federal air quality standards in the Project vicinity, even though these pollutant emissions may not be significant enough to create a regional impact to the South Coast Air Basin. In order to assess local air quality impacts the SCAQMD has developed Localized Significant Thresholds (LSTs) to assess the Project-related air emissions in the Project vicinity. The SCAQMD has also provided Final Localized Significant Threshold Methodology (LST Methodology), June 2003, which details the methodology to analyze local air emission impacts. The LST Methodology found that the primary emissions of concern are NO_2, CO, PM10, and PM2.5.

The emission thresholds were calculated based on the Hemet/San Jacinto Valley Source Receptor Area and a disturbance of 4 acres per day at a distance of 25 meters (82 feet), for construction and 5 acres a day for screening of localized operational emissions

4.3.2 Impact Analysis

CEQA Thresholds	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact or Does Not Apply
AIR QUALITY: Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Have a substantial adverse effect on a scenic vista?				X
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?			X	
c) In nonurbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from a publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?			X	
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?			X	

Discussion

a) Conflict with or obstruct implementation of the applicable air quality plan?

No Impact. The SCAQMD CEQA Handbook states that "new or amended General Plan Elements (including land use zoning and density amendments), Specific Plans, and significant projects must be analyzed for consistency with the AQMP." Strict consistency with all aspects of the plan is usually not

COPY

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

required. A proposed project should be considered to be consistent with the AQMP if it furthers one or more policies and does not obstruct other policies. The current regional plan applicable to the Project is the SCAQMD's 2022 AQMP, discussed in further detail above.

The SCAQMD CEQA Handbook identifies two key indicators of consistency:

1. Whether the project will result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations, or delay timely attainment of air quality standards or the interim emission reductions specified in the AQMP.

2. Whether the project will exceed the assumptions in the AQMP in 2016 or increments based on the year of project buildout and phase.

Both of these criteria are evaluated below.

Criterion 1 - Increase in the Frequency or Severity of Violations – Based on the air quality modeling analysis discussed further below and in **Appendix A-1**, short-term construction impacts would not result in significant impacts based on the SCAQMD regional and local thresholds of significance. Additionally, as discussed further below and in **Appendix A-1**, long-term operations impacts would not result in significant impacts based on the SCAQMD regional thresholds of significance. Therefore, the Proposed Project is not projected to contribute to the exceedance of any air pollutant concentration standards and is found to be consistent with the AQMP for the first criterion.

Criterion 2 - Exceed Assumptions in the AQMP – Consistency with the AQMP assumptions is determined by performing an analysis of the proposed Project with the assumptions in the AQMP. The emphasis of this criterion is to ensure that the analyses conducted for the proposed Project are based on the same forecasts as the AQMP. The 2024-2050 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS), prepared by SCAG and adopted on April 4, 2024, includes chapters on: the challenges in a changing region, creating a plan for our future, and the road to greater mobility and sustainable growth. These chapters currently respond directly to federal and state requirements placed on SCAG. Local governments are required to use these as the basis of their plans for purposes of consistency with applicable regional plans under CEQA. For the Proposed Project, the City of San Jacinto Land Use Plans define the assumptions that are represented in the AQMP.

The City of San Jacinto General Plan identifies the land use designation of the site as Very Low Density Residential. The Proposed Project is a residential development. The Proposed Project includes the application for a General Plan Amendment to revise the land use designation from VLDR (Very Low Density Residential) to LDR (Low Density Residential) and a Zoning Map Amendment (Zone Change) from the RR Zone (Rural Residential) to the LDR Zone (Residential – Low Density). Therefore, as the Proposed Project seeks to maintain the residential land uses, instead of changing them to commercial or industrial, the Proposed Project would not result in an inconsistency with the land use designation in the City's General Plan and is not anticipated to exceed the AQMP assumptions for the Proposed Project Site. As such, the Project is found to be consistent with the AQMP for the second criterion.

b) *Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?*

Less Than Significant Impact. A project may have a significant impact where project-related emissions would exceed federal, State, or regional standards or thresholds, or where project-related emissions would substantially contribute to an existing or projected air quality violation. The SCAQMD has

COPY

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

developed construction and operations thresholds, as described above, to determine whether projects would potentially result in contributing toward a violation of ambient air quality standards.

Construction Emissions – Regional

Typical emission rates from construction activities were obtained from the California Emissions Estimator Model (CalEEMod) Version 2022.1.1.22 CalEEMod is a computer model published by the SCAQMD for estimating air pollutant emissions. The CalEEMod program uses the EMFAC2017 (EMission Factor) computer program to calculate the emission rates specific for the southwestern portion of Riverside County for construction-related employee vehicle trips and the OFFROAD2011 computer program to calculate emission rates for heavy truck operations. EMFAC2017 and OFFROAD2011 are computer programs generated by CARB that calculates composite emission rates for vehicles. Emission rates are reported by the program in grams per trip and grams per mile or grams per running hour. Using CalEEMod, the peak daily air pollutant emissions were calculated and presented below. These emissions represent the highest level of emissions for each of the construction phases in terms of air pollutant emissions.

Table 6: Regional Significance – Construction Emissions (pounds/day) identified the emissions for proposed Project (**Appendix A-1**). In addition, SCAQMD Rule 402 and 403 were incorporated into the model, and are not considered mitigation measures as the Project is, by default, required to incorporate these rules during construction

Table 6: Regional Significance – Construction Emissions (pounds/day)

Activity	Pollutant Emissions (pounds/day)

Exceeds Thresholds	No	No	No	No	No	No

Notes:
1 Source: CalEEMod Version 2022.1.1.22
2 On-site emissions from equipment operated on-site that is not operated on public roads.
3 Off-site emissions from equipment operated on public roads.
4 Construction, architectural coatings and paving phases may overlap.

As shown in Table 6, the construction emissions for the Proposed Project would not exceed the SCAQMD's daily emission thresholds at the regional level, and therefore would be considered less than significant.

Construction Emissions – Localized Significance Thresholds

In addition to the mass daily emissions thresholds established by the SCAQMD, short-term local impacts to nearby sensitive receptors from on-site emissions of NO2, CO, PM10, and PM2.5 are examined based on SCAQMD LST methodology.

The SCAQMD has published a "Fact Sheet for Applying CalEEMod to Localized Significance Thresholds." CalEEMod calculates construction emissions based on the number of equipment hours and the maximum daily disturbance activity possible for each piece of equipment. In order to compare CalEEMod reported emissions against the localized significance threshold lookup tables, the CEQA document should contain in its project design features or its mitigation measures the following parameters:

1. The off-road equipment list (including type of equipment, horsepower, and hours of operation) assumed for the day of construction activity with maximum emissions.
2. The maximum number of acres disturbed on the peak day.
3. Any emission control devices added onto off-road equipment.
4. Specific dust suppression techniques used on the day of construction activity with maximum emissions.

The construction equipment showing the equipment associated with the maximum area of disturbance was assumed to be 4 acres per day for the previously proposed project (**Table 7: Construction Equipment Assumptions**), and no changes in equipment are anticipated for the currently proposed Project.

Table 7: Construction Equipment Assumptions

COPY

The local air quality emissions from construction were analyzed using the SCAQMD's Mass Rate Localized Significance Threshold Look-up Tables and the methodology described in the Localized Significance Threshold Methodology, prepared by SCAQMD, revised July 2008. The Look-up Tables were developed by the SCAQMD in order to readily determine if the daily emissions of CO, NOx, PM10, and PM2.5 from the Proposed Project could result in a significant impact to the local air quality. The emission thresholds were based on the Hemet/San Jacinto Valley source receptor area and a disturbance of 4 acres per day at a distance of 25 meters (82 feet). The closest receptors are located 30 meters to the north of the site. The 4-acre threshold is interpolated from the 2- and 5-acre thresholds.

As shown in **Table 8: Localized Significance – Construction**, none of the analyzed criteria pollutants for the Proposed Project would exceed the local emissions thresholds at the nearest sensitive receptors. Therefore, a less than significant local air quality impact would occur from construction of the Proposed Project. No mitigation is required.

Table 8: Localized Significance – Construction

Phase	On-Site Pollutant Emissions (pounds/day)[1]			
	NOx	CO	PM10	PM2.5
Demolition	22.20	19.90	1.52	0.93
Site Preparation	31.60	30.20	9.04	5.20
Grading	29.70	28.30	4.87	2.57
Building Construction	10.40	13.00	0.43	0.40
Paving	6.94	9.95	0.30	0.27
Architectural Coating	1.13	0.00	0.02	0.02
Total of overlapping phases	18.47	22.95	0.75	0.69
SCAQMD Threshold for 25 meters (82 feet) or less[2]	325.3	1,676.7	11.0	6.7
Exceeds Threshold?	No	No	No	No

Notes:

1 Source: Calculated from CalEEMod and SCAQMD's Mass Rate Look-up Tables for 4 acres in Hemet/San Jacinto Valley Source Receptor Area (SRA 28). Project will disturb a maximum of 4.0 acres per day (see Table 7).

2 The nearest sensitive receptor is located 30 meters north; therefore, the 25-meter threshold has been used.

Long-Term Operational Emissions

Operational or long-term emissions occur would over the life of the Project. Mobile, area, and energy sources generate operational emissions. Area source emissions arise from consumer product usage, heaters that consume natural gas, gasoline-powered landscape equipment, and architectural coatings (painting). Mobile source emissions from motor vehicles are the largest single long-term source of air pollutants from the operation of the Project. The operational emissions were estimated using the latest version of CalEEMod, as shown in **Appendix A-1**.

Mobile Sources: Mobile sources include emissions from the additional vehicle miles generated from the proposed Project. The vehicle trips associated with the proposed Project are based upon the trip generation rates given in the ITE trip generation manual. The traffic analysis shows a trip generation rate of approximately 3,952 trips per day (**Appendix H**).

COPY

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

The program then applies the emission factors for each trip which is provided by the EMFAC2017 model to determine the vehicular traffic pollutant emissions. The CalEEMod default trip lengths were used in this analysis, as shown in **Appendix A-1**.

Area Sources: Area sources include emissions from consumer products, landscape equipment and architectural coatings. Landscape maintenance includes fuel combustion emissions from equipment such as lawn mowers, rototillers, shredders/grinders, blowers, trimmers, chain saws, and hedge trimmers, as well as air compressors, generators, and pumps. As specifics were not known about the landscaping equipment fleet, CalEEMod defaults were used to estimate emissions from landscaping equipment, as shown in **Appendix A-1**.

Per SCAQMD Rule 1113 as amended on June 3, 2011, the architectural coatings that would be applied after January 1, 2014 will be limited to an average of 50 grams per liter or less and the CalEEMod model default was utilized as the new model takes this rule into account.

Energy Usage: CalEEMod defaults were utilized to determine the approximate energy usage, as shown in **Appendix A-1**. The Project will be 100 percent electric. Solar photovoltaic panels have been included in the analysis per Title 24 requirements (Part 6 – Section 110.10).

The potential air quality impacts of created by the Proposed Project's long-term operations were calculated, and the highest emissions from either summer or winter are summarized in **Table 9: Regional Significance – Unmitigated Operational Emissions**.

Table 9: Regional Significance – Unmitigated Operational Emissions

Activity	Pollutant Emissions (pounds/day)[1]					
	VOC	NOx	CO	SO2	PM10	PM2.5
Area Sources[2]	21.00	0.23	23.80	0.00	0.01	0.01
Energy Usage[3]	0.00	0.00	0.00	0.00	0.00	0.00
Mobile Sources[4]	14.40	13.10	116.00	0.30	27.60	7.17
Total Emissions	35.40	13.33	139.80	0.30	27.61	7.18
SCAQMD Thresholds	55	55	550	150	150	55
Exceeds Threshold?	No	No	No	No	No	No

Notes:
1 Source: CalEEMod Version 2022.1.1.22
2 Area sources consist of emissions from consumer products, architectural coatings, and landscaping equipment.
3 Energy usage consists of emissions from on-site natural gas usage.
4 Mobile sources consist of emissions from vehicles and road dust.

As shown on Table 9, the Proposed Project does not exceed the SCAQMD daily emission threshold. Therefore, regional operational emissions would be less than significant. No mitigation is required.

Operational Localized Significance Thresholds

Table 10: Localized Significance – Unmitigated Operational Emissions, shows the calculated emissions for the proposed operational activities compared with appropriate LSTs. The LST analysis only includes on-site sources; however, the CalEEMod software outputs do not separate on-site and off-site emissions for mobile sources. For a worst-case scenario assessment, the emissions shown in Table 10 include all on-site Project-related stationary sources and 10 percent of the Project-related new mobile sources. This percentage is an estimate of the amount of Project- related new vehicle traffic that will occur on-site.

COPY

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

Table 10: Localized Significance – Unmitigated Operational Emissions

On-Site Emission Source	On-Site Pollutant Emissions (pounds/day)[1]			
	NOx	CO	PM10	PM2.5
Area Sources[2]	0.23	23.80	0.01	0.01
Energy Usage[3]	0.00	0.00	0.00	0.00
On-Site Vehicle Emissions[4]	0.44	3.87	0.92	0.24
Total Emissions	0.67	27.67	0.93	0.25
SCAQMD Threshold for 25 meters (82 feet) or less[2]	371	1,965	4	2
Exceeds Threshold?	No	No	No	No

Notes:
1 Source: Calculated from CalEEMod and SCAQMD's Mass Rate Look-up Tables for 5 acres in Hemet/San Jacinto Valley Source Receptor Area (SRA 28). Project will be approximately 76.3 acres.
2 Area sources consist of emissions from consumer products, architectural coatings, and landscaping equipment.
3 Energy usage consists of emissions from generation of electricity and on-site natural gas usage.
4 On-site vehicular emissions based on 1/10 of the gross vehicular emissions and road dust.
5 The nearest sensitive receptor is located 30 meters north; therefore, the 25-meter threshold has been used.

Table 10 indicates that the local operational emissions would not exceed the LST thresholds at the nearest sensitive receptors, located adjacent to the Project, the currently Proposed Project would not result in significant Localized Operational emissions. No mitigation is required.

Cumulative Regional Air Quality Impacts

Cumulative projects include local development as well as general growth within the project area. However, as with most development, the greatest source of emissions is from mobile sources, which travel well out of the local area. Therefore, from an air quality standpoint, the cumulative analysis would extend beyond any local projects and when wind patterns are considered, would cover an even larger area. Accordingly, the cumulative analysis for the Project's air quality must be generic by nature.

The Project area is out of attainment for both ozone and PM10 particulate matter. Construction and operation of cumulative projects will further degrade the local air quality, as well as the air quality of the South Coast Air Basin. The greatest cumulative impact on the quality of regional air cell will be the incremental addition of pollutants mainly from increased traffic from residential, commercial, and industrial development and the use of heavy equipment and trucks associated with the construction of these projects. Air quality will be temporarily degraded during construction activities that occur separately or simultaneously. However, in accordance with the SCAQMD methodology, projects that do not exceed the SCAQMD criteria or can be mitigated to less than criteria levels are not significant and do not add to the overall cumulative impact. The Project would not exceed any of the thresholds of significance and therefore is considered less than significant.

c) *Expose sensitive receptors to substantial pollutant concentrations?*

Less Than Significant Impact. A significant impact may occur when a project would generate pollutant concentrations to a degree that would significantly affect sensitive receptors, which include populations that are more susceptible to the effects of air pollution than the population at large. Exposure of sensitive receptors is addressed for the following situations: CO hotspots; criteria pollutants and toxic air contaminants (TACs, specifically diesel particulate matter [DPM]) from on-site construction; exposure to off-site TAC emissions; and asbestos and lead-based paint during demolition. Operational, long-term TACs may be generated by some industrial land uses; commercial land uses

COPY

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

(e.g., gas stations and dry cleaners); and diesel trucks on freeways. Residential land uses do not generate substantial quantities of TACs and are therefore not addressed in this section of this document.

Carbon Monoxide Hotspot Emissions

CO is the pollutant of major concern along roadways because the most notable source of CO is motor vehicles. For this reason, CO concentrations are usually indicative of the local air quality generated by a roadway network and are used as an indicator of potential local air quality impacts. Local air quality impacts can be assessed by comparing future without and with project CO levels to the State and Federal CO standards which were presented above.

To determine if the proposed Project could cause emission levels in excess of the CO standards discussed above, a sensitivity analysis is typically conducted to determine the potential for CO "hot spots" at a number of intersections in the general project vicinity. Because of reduced speeds and vehicle queuing, "hot spots" potentially can occur at high traffic volume intersections with a Level of Service E or worse.

Micro-scale air quality emissions have traditionally been analyzed in environmental documents where the air basin was a non-attainment area for CO. However, the SCAQMD has demonstrated in the CO attainment redesignation request to EPA that there are no "hot spots" anywhere in the air basin, even at intersections with much higher volumes, much worse congestion, and much higher background CO levels than anywhere in Riverside County. If the worst-case intersections in the air basin have no "hot spot" potential, any local impacts will be below thresholds.

The traffic analysis (**Appendix H**) showed that the Project would generate 3,952 trips per day. The 1992 Federal Attainment Plan for Carbon Monoxide (1992 CO Plan) showed that an intersection which has a daily traffic volume of approximately 100,000 vehicles per day would not violate the CO standard. The volume of traffic at Project buildout would be well below 100,000 vehicles and below the necessary volume to even get close to causing a violation of the CO standard. Therefore, no CO "hot spot" modeling was performed, and no significant long-term air quality impact is anticipated to local air quality with the on-going use of the Proposed Project.

Exposure to On-Site Construction Toxic Air Contaminant Emissions

The greatest potential for toxic air contaminant emissions would be related to diesel particulate emissions associated with heavy equipment operations during construction of the Proposed Project. The Office of Environmental Health Hazard Assessment (OEHHA) has issued the Air Toxic Hot Spots Program Risk Assessment Guidelines and Guidance Manual for the Preparation of Health Risk Assessments, February 2015 to provide a description of the algorithms, recommended exposure variates, cancer and noncancer health values, and the air modeling protocols needed to perform a HRA under the Air Toxics Hot Spots Information and Assessment Act of 1987. Hazard identification includes identifying all substances that are evaluated for cancer risk and/or non-cancer acute, 8-hour, and chronic health impacts. In addition, identifying any multi-pathway substances that present a cancer risk or chronic non- cancer hazard via non-inhalation routes of exposure.

An HRA was prepared for the Proposed Project (**Appendix A-2**). According to the HRA, construction activities would result in short-term Project-generated emissions of DPM from the exhaust of off-road, heavy-duty diesel equipment used for site preparation (e.g., demolition, excavation, and grading); paving; building construction; and other miscellaneous activities. CARB identified DPM as a TAC in 1998. The dose to which receptors are exposed is the primary factor used to determine health risk. Dose is a function of the concentration of a substance or substances in the environment and the duration of

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

COPY

exposure to the substance. Thus, the risks estimated for a maximally exposed individual are higher if a fixed exposure occurs over a longer time period. According to the OEHHA, HRAs—which determine the exposure of sensitive receptors to TAC emissions—should be based on a 30-year exposure period; however, such assessments should be limited to the period/duration of activities associated with the Project (**Appendix A-2**).

The Project would result in the development of residential uses which do not involve substantial levels of TACs due to the nature of the development. However, construction activities will result in emissions of DPM which is carcinogenic. The HRA report in **Appendix A-2** estimated the cancer risk to construction for 10 receptor locations near the Project Site (Table 3, **Appendix A-2**). The report identifies that the cancer risks from construction activities are estimated to range from a low of 0.21 per million at West Esplanade Ave to a high of 0.86 per million along West Seventh Street. All estimates are below the SCAQMD's significance threshold of 10 in a million. As such, Project-related construction emissions of TACs would not expose sensitive receptors to substantial emissions of TACs (**Appendix A-2**). The impact would be less than significant, and no mitigation is required.

Exposure to Off-Site Construction Toxic Air Contaminant Emissions

As stated in the HRA, the CARB Air Quality and Land Use Handbook: A Community Health Perspective provides guidance concerning land use compatibility with TAC sources (CARB 2005). While not a law or adopted policy, the handbook offers advisory recommendations for siting sensitive receptors near uses associated with TACs (such as freeways and high-traffic roads, commercial distribution centers, rail yards, ports, refineries, dry cleaners, gasoline stations, and industrial facilities) to help keep children and other sensitive populations out of harm's way. (**Appendix A-2**).

Projects of concern for mobile sources of TACs are typically those located within 500 feet of the following types of facilities that emit significant quantities of DPM: urban roads with more than 100,000 vehicles per day; freeways or roads with a high heavy truck concentration; and/or near rail yards, ports, and/or distribution centers. The Proposed Project Site is more than 500 feet from any freeway or major urban road. With respect to proximity to emissions from railroad sources, CARB recommends avoiding siting new sensitive land uses within 1,000 feet of a major service and maintenance rail yard (CARB 2005); the Proposed Project Site is not located within 1,000 feet of this type of facility. CARB recommends not placing sensitive receptors within the same building as a dry cleaner and avoiding siting residences within 300 feet of a large gas station or within 500 feet of dry-cleaning operations with 2 machines using perchloroethylene. There are no gas stations within 300 feet or dry cleaners within 500 feet of the Proposed Project Site. As such, the health risks associated with locating sensitive receptors proximate to a dry cleaner would be less than significant since there are no dry cleaners located within 500 feet of the site. It is important to note the CARB recommendation was published in 2005; however, subsequent to CARB's recommendation in 2007, the CARB established a phase-out of perchloroethylene usage at dry cleaners by 2023.

The HRA for the Project has also provided the relative health risk of the Project area as well as other locations in the general area and the air basin. The overall cancer risk at the Proposed Project Site of 254 per million health risk is generally lower than other areas identified within the HRA and substantially less than the basin-wide average of 455 in a million health risk. As such, no off-site sensitive uses would be exposed to significant levels TACs. Impacts would be less than significant, and no mitigation is required (**Appendix A-2**).

COPY

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Less Than Significant Impact. The SCAQMD recommends that odor impacts be addressed in a qualitative manner. Such an analysis shall determine whether the Project would result in excessive nuisance odors, as defined under the California Code of Regulations and Section 41700 of the California Health and Safety Code, and thus would constitute a public nuisance related to air quality.

Potential sources that may emit odors during construction activities include the application of materials such as asphalt pavement. The objectionable odors that may be produced during the construction process are short-term in nature and the odor emissions are expected to cease upon the drying or hardening of the odor producing materials. Diesel exhaust and VOCs would be emitted during construction of the Project, which are objectionable to some; however, emissions would disperse rapidly from the Proposed Project Site and therefore should not reach an objectionable level at the nearest sensitive receptors. Due to the short-term nature and limited amounts of odor producing materials being utilized, no significant impact related to odors would occur during construction of the Proposed Project.

Potential sources that may emit odors during the on-going operations of the proposed Project would include odor emissions from trash storage areas and vehicle emissions. Due to the distance of the nearest receptors from the Proposed Project Site and through compliance with SCAQMD's Rule 402, no significant impact related to odors would occur during the on-going operations of the proposed Project and no mitigation is required.

4.3.3 Mitigation Measures

No mitigation measures associated with impacts to Air Quality apply to the Proposed Project.

4.3.4 Conclusion

There are less than significant potential impacts of the Proposed Project associated with Air Quality, and no mitigation would be required.

4.4 Biological Resources

Information and analysis in this section is derived from the documents incorporated by reference as identified in Section 1.3 of this document and biological surveys completed to determine potential impacts to biological services associated with the development of the Proposed Project, included as **Appendix B-1** – ***Habitat Assessment for Chacon Farms Property,* Psomas, March 5, 2024**, and **Appendix B-2 – *Tree Inventory Report for the Chacon Farms Property, City of San Jacinto, California,* Psomas, April 28, 2023.**

4.4.1 Regulatory Setting

Given the local environment, regulations governing biological resources for this Project include the following:

Migratory Bird Treaty Act

The federal Migratory Bird Treaty Act (MBTA) of 1918 (16 U.S.C 703-711) provides protection for nesting birds that are both residents and migrants whether they are considered sensitive by resource agencies. The MBTA makes it unlawful to take, possess, buy, sell, purchase, or barter any migratory bird listed under 50 CFR 10, including feathers or other parts, nests, eggs, or products, except as allowed by implementing regulations (50 CFR 21). The direct injury or death of a migratory bird, due to construction activities or other construction-related disturbance that causes nest abandonment, nestling abandonment, or forced fledging would be considered a take under federal law. The USFWS, in coordination with the California Department of Fish and Wildlife (CDFW) administers the MBTA. CDFW's authoritative nexus to MBTA is provided in California Fish and Game Code (FGC) Sections 3503.5 which protects all birds of prey and their nests and FGC Section 3800 which protects all non-game birds that occur naturally in the State.

Endangered Species Act - Federal

The purpose of the United States Endangered Species Act that was established in 1973 provides protections for fish, wildlife, and plants that are listed as threatened or endangered; provides for adding species to and removing them from the list of threatened and endangered species, and for preparing and implementing plans for their recovery; provides for interagency cooperation to avoid take of listed species and for issuing permits for otherwise prohibited activities; provides for cooperation with States, including authorization of financial assistance; and implements the provisions of the Convention on International Trade in Endangered Species of Wild Flora and Fauna. The US Fish and Wildlife administers the federal Endangered Species Act.

California Endangered Species Act

The California Endangered Species Act (CESA) is a California environmental law that conserves and protects plant and animal species at risk of extinction. Originally enacted in 1970, CESA was repealed and replaced by an updated version in 1984 and amended in 1997. Plant and animal species may be designated threatened or endangered under CESA after a formal listing process by the California Fish and Game Commission. Approximately 250 species are currently listed under CESA. A CESA-listed species, or any part or product of the plant or animal, may not be imported into the state, exported out of the state, "taken" (i.e., killed), possessed, purchased, or sold without proper authorization. Implementation of CESA has reduced and avoided impacts to California's most imperiled plants and animals, has protected hundreds of thousands of acres of vital habitat, and has led to a greater scientific understanding of California's incredible biodiversity.

The California Department of Fish and Wildlife (CDFW) works with agencies, organizations, and other interested persons to study, protect, and preserve CESA-listed species and their habitats. CDFW also conducts scientific reviews of species petitioned for listing under CESA, administers regulatory permitting programs to authorize take of listed species, maintains an extensive database of listed species occurrences, and conducts periodic reviews of listed species to determine if the conditions that led to original listing are still present.

COPY

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

4.4.2 Environmental Setting

The Proposed Project Site consists of agricultural areas with developed and disturbed areas around the edges. Existing vegetation observed on the Proposed Project Site include field croplands and valley and foothill grassland; disturbed and developed landcovers are also present, as shown in **Appendix B-1** (refer to *Exhibit 4, Vegetation Types and Other Areas*).

Additionally, there is a detention basin located in the northwest corner of the Proposed Project Site. The detention basin undergoes routine maintenance and appears to have been plowed multiple times in the past based on historical aerials. The main source of water for this basin is irrigation from the adjacent agricultural fields; no natural inlet or outlet was observed in the field. It does not connect to a natural drainage, and no riparian vegetation is present.

4.4.3 Impact Analysis

CEQA Thresholds	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact or Does Not Apply
BIOLOGICAL RESOURCES: Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?		X		
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?				X
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means				X
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?		X		
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?			X	
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?		X

Discussion

a) Have a substantial adverse effect, either directly or through habitat modification, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

Less Than Significant Impact With Mitigation Incorporated.

No candidate, sensitive, or special status species are expected to occur on the Proposed Project Site due to lack of suitable habitat and/or because they were absent during focused surveys. The Proposed Project Site is not located within any designated critical habitat for federally or State-listed Threatened or Endangered species.

According to the Western Riverside County Regional Conservation Authority Multiple Species Habitat Conservation Plan (MSHCP) Information Mapping Application (2023), the Proposed Project Site was required to be assessed for Narrow Endemic plant species, burrowing owl (*Athene cunicularia*), Riparian/Riverine habitat (i.e., riparian bird species), and vernal pool branchiopods (i.e., fairy shrimp).

Narrow Endemic Plants

Per Section 6.1.3 of the MSHCP, habitat was assessed for the following Narrow Endemic plant species: Munz's onion (*Allium munzii*), San Diego ambrosia (*Ambrosia pumila*), many-stemmed dudleya (*Dudleya multicaulis*), spreading navarretia (*Navarretia fossalis*), Californica Orcutt grass (*Orcuttia californica*), and Wright's trichocoronis (*Trichocoronis wrightii*). Of these Narrow Endemic plant species, San Diego ambrosia, spreading navarretia, California Orcutt grass, and Wright's trichocoronis had limited potential to occur based on the presence of marginally suitable habitat (i.e., the on-site basin and/or margins of the agricultural field). Munz's onion and many- stemmed dudleya would not be expected to occur based on lack of suitable habitat. Additionally, the Proposed Project Site was determined to have potential for Salt Spring checkerbloom (*Sidalcea neomexicana*), which is a California Rare Plant Rank [CRPR] 2B.2[2] species and is not covered by the MSHCP. Focused surveys were conducted for Narrow Endemic and other special status plant species; no Narrow Endemic or special status plant species were observed. Therefore, there would be no impact on these species, and no mitigation would be required.

Burrowing Owl

On October 10, 2024, the California Fish and Game Commission (CFGC) accepted the petition to designate the western burrowing owl as a candidate species for protection under the California Endangered Species Act (CESA). The species will have full CESA protections until the California Department of Fish and Wildlife (CDFW) decides whether listing is warranted, which will likely occur in late 2025 or early 2026. The MSHCP identifies the burrowing owl as a covered species and requires surveys to determine habitat and presence prior to approving projects. The City of San Jacinto is signatory to the MSHCP.

Per Section 6.3.2 of the MSHCP, the Proposed Project Site was assessed for the presence of burrowing owl habitat. The habitat assessment determined that suitable habitat for the burrowing owl was present on the Proposed Project Site and adjacent areas (e.g., field croplands and disturbed areas); therefore, focused surveys were required. Potentially suitable burrows were observed; however, no burrowing owls, or other evidence of owl presence (e.g., cast pellets, white-wash, feathers, or prey

2 CRPR 2B.2: Plants rare, threatened, or endangered in California but common elsewhere; 20–80 percent of occurrences threatened.

COPY

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

remains) were observed during the focused surveys. Therefore, there would be no impact on this species, and no compensatory mitigation would be required.

Because site conditions change over time and burrowing owls move seasonally, a burrowing owl could be on the Proposed Project Site in the future. All projects located within the Additional Survey Area for burrowing owl are required to conduct a pre-construction survey for burrowing owl within 30 days prior to construction to ensure the Project would not impact any active burrows. Therefore, the Project would implement **Mitigation Measure BIO-1**, which would require a pre-construction survey for burrowing owls.

Riparian Bird Species

Per Section 6.1.2 of the MSHCP, the Proposed Project Site must be assessed for the presence of Riparian/Riverine habitat; no Riparian/Riverine habitat was present on the Proposed Project Site. Therefore, there would be no impact on riparian bird species covered by this section of the MSHCP, and no mitigation would be required.

Vernal Pool Branchiopods (Fairy Shrimp)

Per Section 6.1.2 of the MSHCP, the Proposed Project Site must be assessed for the presence of vernal pools and associated vernal pool branchiopods. The detention basin at the northwest corner of the Proposed Project Site was observed to support ponding; the source of the water appears to be irrigation from the adjacent agricultural fields. Historic aerials were examined on Google Earth between 1996 to 2021 to examine the extent of ponding over time. The artificial basin appears to have been intermittently ponded beginning in 2009. During dry periods, the area appears to have been plowed and blends in with the surrounding agricultural field. As stated in the MSHCP, stock ponds, ephemeral pools, and other features that are artificially created are not considered vernal pools meeting the requirements of Section 6.1.2 (refer to Fair Shrimp Report in **Appendix B-1**). However, they may still provide habitat for vernal pool invertebrate species that are protected by the MSHCP.

One wet season focused survey and one dry season focused survey were conducted for Riverside fairy shrimp (*Streptocephalus woottoni*) and vernal pool fairy shrimp (*Branchinecta lynchi*) in 2022–2023; neither of these species was observed during the wet season fairy shrimp surveys. Dry season sampling was conducted in August 2023; *Branchinecta* cysts were observed but the lab results were inconclusive. Of the cysts observed, only one cyst hatched; it was identified as versatile fairy shrimp (*Branchinecta lindali*), a common species of fairy shrimp. The *Brancinecta* cysts collected during dry season sampling were then sent to Washington State University for a genetic analysis; results of the genetic analysis confirmed the genetic material was from versatile fairy shrimp (i.e., the common species). No Riverside fairy shrimp or vernal pool fairy shrimp were observed during focused surveys; therefore, there would be no impact on these species.

Crotch's Bumble Bee

Crotch's bumble bee (*Bombus crotchii*) was proposed as a Candidate to be State listed as Endangered in 2019; this species is not a Covered Species in the MSHCP. Crotch bumble bee is a ground nester and often makes its nest in abandoned mammal burrows; it can be found in most native habitat types, although it prefers grassland and scrub habitats. The Proposed Project Site has been utilized as an agricultural area that lacks vegetation, and the Proposed Project Site has been regularly tilled (detrimental to ground-nesting bees) and may have been exposed to pesticides. While the edges of the agricultural fields may be considered marginally suitable, this species is not expected to occur because the surrounding land uses are agricultural or residential; there are no adjacent areas of grassland or scrub habitats.

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

COPY

Mountain Lion

The mountain lion (*Puma concolor*) is currently a Candidate to be State listed as Threatened as an Evolutionary Significant Unit (ESU). Regardless of the outcome of the proposed listing, this species is already a MSHCP Covered Species. The mountain lion occurs throughout most of California except for the Mojave and Colorado Deserts and the croplands of the Central Valley. Mountain lions occur in a variety of habitats, especially brushy habitats and riparian areas with interspersed irregular terrain, rocky outcrops, and tree/brush edges. Mountain lions use caves, natural cavities, and thickets for cover. A major threat to this species is fragmentation of habitat by spread of human developments and associated roads. Mountain lion is not expected to occur on the Proposed Project Site due to lack of suitable habitat. Additionally, the Proposed Project Site is also not within an area designated as a MSHCP linkage for wildlife movement.

Stephens' Kangaroo Rat

In response to the listing of Stephens' kangaroo rat (*Dipodomys stephensi*), the Riverside County Habitat Conservation Agency developed a Stephens' Kangaroo Rat Habitat Conservation Plan (SKR HCP). The City of San Jacinto is not a participant in the SKR HCP; however, the MSHCP provides take authorization for projects outside the SKR HCP but within the MSHCP boundaries. Stephens' kangaroo rat is not expected to occur on the Proposed Project Site due to lack of suitable habitat.

b) *Have a substantial adverse effect on any riparian habitat or sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?*

No Impact. There is no riparian habitat or sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service present on the Project Site (**Appendix B-1**). There would be no impact, and no mitigation is required.

c) *Have a substantial adverse effect on state or federally protected wetlands (including but not limited to marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?*

No Impact. There are no jurisdictional features on the Proposed Project Site. The detention basin present in the northwest corner of the Proposed Project Site was artificially created in uplands that were previously used for croplands. This area is irrigated, as evidenced by rills in the banks adjacent to the active agricultural field. This type of waterbody is excluded from being classified as a Waters of the U.S. under the jurisdiction of U.S. Army Corps of Engineers (USACE) because it is isolated. Artificial wetlands less than one acre in size are not considered Waters of the State under the authority of the Regional Water Quality Control Board (RWQCB). Based on historic aerial imagery and topographic maps, this area does not appear to have been part of a historic drainage; therefore, it would not be under the regulatory authority of the CDFW. As such, no drainages or other waters that would be under the jurisdiction of the USACE, RWQCB, or CDFW occur on the Proposed Project Site.

As mentioned above, the detention basin at the northwest corner of the Proposed Project Site was observed to support ponding; the source of the water appears to be irrigation from the adjacent agricultural fields. Historic aerials were examined on Google Earth between 1996 to 2021 to examine the extent of ponding over time. The detention basin appears to have been intermittently ponded beginning in 2009. During dry periods, the area appears to have been plowed and blends in with the surrounding agricultural field. As stated in the MSHCP, stock ponds, ephemeral pools, and other features that are artificially created are not considered vernal pools meeting the requirements of

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

COPY

Section 6.1.2 (**Appendix B-1**). Therefore, no impact would occur related to wetlands, and no mitigation would be required.

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Less Than Significant Impact With Mitigation Incorporated. The Proposed Project Site is surrounded by existing development, with suburban development to the north and east, a dairy farm to the south, and construction an additional residential development to the west. Additionally, the Proposed Project Site is not located within a "Core" or "Linkage" area designated by the MSHCP. Wildlife could move locally through the Proposed Project Site and adjacent residential, agricultural, and dairy land. The Proposed Project Site is expected to be used for local movement by urban-tolerant species such as coyote (*Canis latrans*), which could also use the Proposed Project Site after Project implementation. Therefore, there would be no impact on wildlife movement.

Birds have potential to nest throughout the Proposed Project Site in vegetation, on bare ground, and on structures. The MBTA protects the taking of migratory birds and their nests and eggs. Bird species protected under the provisions of the MBTA are identified by the List of Migratory Birds (Code of Federal Regulations, Title 50, Section 10.13). Section 3503 of the California Fish and Game Code makes it unlawful to take, possess, or destroy any bird's nest or any bird's eggs. Section 3513 of the California Fish and Game Code prohibits the take and possession of any migratory nongame bird, as designated in the MBTA. Any impact on an active bird nest would be considered a violation of the MBTA. Section 7.5.3 of the MSHCP requires implementation of Construction Minimization Measures, which include conducting vegetation clearing outside the peak nesting season (i.e., March 1 to June 30) to the extent practicable in order to avoid impacts on nesting birds. Implementation of **Mitigation Measure BIO-2** would require a pre-construction nesting bird/raptor survey and protection for any nests observed.

Existing trees located in the northeastern corner of the Proposed Project Site and adjacent to the Proposed Project Site also have potential to be used for nesting by raptors. Trees within the Proposed Project Site include Peruvian pepper tree (*Schinus mole*), Mexican fan palm (*Washingtonia robusta*), and California fan palm (*Washingtonia filifera*) (refer to **Appendix B-2**). If construction occurs during the raptor nesting season (i.e., February 1 to June 30), the loss of an active nest of any raptor species, including common raptor species, would be considered a violation of Sections 3503, 3503.5, and 3513 of the California Fish and Game Code. As discussed above, Section 7.5.3 of the MSHCP requires implementation of Construction Minimization Measures, which include conducting vegetation clearing outside the peak nesting season to the extent practicable in order to avoid impacts on nesting birds (including raptors); however, raptors nest slightly earlier than other nesting birds (i.e., February 1 to June 30). Implementation of **Mitigation Measure BIO-2** would require a pre-construction nesting bird/raptor survey and protection for any nests observed. Therefore, impacts related to migratory corridors or native nursery sites would be less than significant with mitigation measures incorporated.

e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Less Than Significant. The City of San Jacinto Municipal Code prohibits removal of trees from public streets or parkways, and authorization must be obtained from the City Council (Section 12.20). There is no restriction on the removal of trees located on private property; however, tentative tract maps must show the location of all trees having a diameter of 9.5 inches or greater. A total of 22 trees occur on the Proposed Project Site, as shown in the Tree Inventory Report (**Appendix B-2**) including one tree of heaven (*Ailanthus altissima*), one lemon tree (*Citrus limon*), two Mondell pine (*Pinus eldarica*), one peach tree (*Prunus persica*), four Peruvian pepper trees, four California fan palms, and nine Mexican

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

COPY

fan palms. Removal of these trees does not conflict with the tree ordinance; they have been incorporated into Project plans. Therefore, there would be no impact, and no mitigation would be required.

f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

Less Than Significant Impact With Mitigation Incorporated. The Proposed Project Site is located in the MSHCP area, specifically, within the San Jacinto Valley Area Plan. The City of San Jacinto is a signatory to the MSHCP; therefore, the Project would be subject to the provisions of the MSHCP. The Proposed Project Site is not located within an MSHCP Criteria Cell; the nearest Criteria Cell is approximately 0.25 miles southwest of the Proposed Project Site. Therefore, the Project would not conflict with assembly of the MSHCP Reserve.

Habitat assessments and focused surveys were conducted in accordance with MSHCP requirements. Focused surveys were negative for all the species that required additional surveys. As required by the MSHCP, a pre-construction survey for burrowing owl will be conducted (Mitigation Measure BIO-1). Also as required by the MSHCP, a per-acre mitigation fee will be required by the City of San Jacinto based on unit density (i.e., 5.5 dwelling units per acre), **Mitigation Measure BIO-3**. Lastly, the Project must be constructed following the standard MSHCP Construction Minimization Measures (MSHCP Section 7.5.3), **Mitigation Measure BIO-4**. With implementation of Mitigation Measures BIO-1, BIO-3, and BIO-4, the Project would not conflict with the MSHCP.

The City of San Jacinto is not a participant in the SKR HCP; however, the MSHCP provides take authorization for projects outside the SKR HCP but within the MSHCP boundaries. The Project does not occur within a SKR HCP Reserve area; therefore, the Project does not conflict with the SKR HCP. As such, impacts would be less than significant with mitigation incorporated.

4.4.4 Mitigation Measures

BIO-1 The Project Applicant shall retain a qualified Biologist to conduct a pre-construction survey for burrowing owl on the Proposed Project Site (and including adjacent areas within 500 feet to the extent possible) within 30 days prior to construction. Methods for the pre-construction surveys shall be conducted as a one-day focused survey following the Burrowing Owl Survey Instructions for the Western Riverside Multiple Species Habitat Conservation Plan (MSHCP 2006). Following the survey, the Biologist shall prepare a Memorandum/Letter Report describing the methods and results of the survey for submittal to the City. If burrowing owl are observed, the Report shall also make recommendations for avoidance and minimization measures depending on the timing of construction and the location of the active burrow with respect to planned activities.

If burrowing owl are observed, the Project Applicant (or their designee) shall contact the City to discuss avoidance and minimization options. During the breeding season (i.e., March 1 to August 31), restrictions shall be placed on construction activities in the vicinity of any active burrow until the burrow is no longer active, as determined by a qualified Biologist. The protective buffer shall be 500 feet (or as otherwise approved by the City) around the active burrow. The protective buffer shall be flagged clearly in the field, mapped as an "Environmentally Sensitive Area," and the maps provided to the Project Applicant, their designee (e.g., Construction Supervisor), and the City. During the wintering season, an active burrow may be closed following CDFW-approved procedures with permission from the City. If the wintering burrow would not be directly impacted, a protective buffer of 160 feet (or as otherwise approved by the City) shall be placed around the burrow. The

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

COPY

protective buffer shall be flagged clearly in the field, mapped as an "Environmentally Sensitive Area," and the maps provided to the Project Applicant, their designee (e.g., Construction Supervisor), and the City. The Project Applicant shall not proceed with construction until the avoidance and minimization measures have been approved by the City and all appropriate protections are in place.

BIO-2 To the extent possible, vegetation removal will be conducted during the non-breeding season (September 12 to January 31)[3] in order to minimize direct impacts on nesting birds and raptors. If construction activities would be initiated during the peak breeding season for nesting birds/raptors (February 1–June 30), a pre-construction survey will be conducted by a qualified Biologist within three days prior to the initiation of construction (including demolition of structures). The nesting bird/raptor survey area will include a buffer of 100 feet around the work area for nesting birds and a buffer of 500 feet around the work area for nesting raptors. This survey can be combined with the pre-construction burrowing owl survey described in MM BIO-1. If the Biologist does not find any active nests in or immediately adjacent to the impact area, construction activities can proceed.

If the Biologist detects an active nest within or immediately adjacent to the construction area and determines that the nest may be impacted, or breeding activities substantially disrupted by increased activity around the nest, the Biologist will determine an appropriate protective buffer around the nest depending on the sensitivity of the species and the nature of the construction activity. The protective buffer shall be between 25 to 100 feet for nesting birds and 300 to 500 feet for nesting raptors. No work will be allowed within the protective buffer until nesting activity has ended, as determined by a qualified Biologist. Any protective buffers will be flagged clearly in the field, mapped as "Environmentally Sensitive Areas," and the maps provided to the Project Applicant, their designee (e.g., Construction Supervisor), and the City. Construction can proceed within the protective buffer when the qualified Biologist has determined that the nest is no longer active (i.e., fledglings have left the nest, or the nest has failed).

BIO-3 Prior to the issuance of a grading permit, the Project Applicant shall pay the MSHCP mitigation fee as directed by the City of San Jacinto based on the most current rates.

BIO-4 The Project Applicant and their designee (i.e., Construction Contractors) shall follow required MSHCP Construction Minimization Measures (Section 7.5.3 of the MSHCP). Applicable construction minimization measures are listed below.

- Plans for water pollution and erosion control will be prepared for all Discretionary Projects involving the movement of earth in excess of 50 cubic yards. The plans will describe sediment and hazardous materials control, dewatering or diversion structures, fueling and equipment management practices, use of plant material for erosion control. Plans will be reviewed and approved by the City prior to construction.
- Timing of construction activities will consider seasonal requirements for breeding birds and migratory non-resident species. Habitat clearing will be avoided during species active breeding season defined as March 1 to June 30.
- Sediment and erosion control measures will be implemented until such time soils are determined to be successfully stabilized.

3 These dates are outside the collective dates for the raptor nesting season (February 1 to June 30, peak nesting bird season (March 1 to June 3), and burrowing owl breeding season (March 1 to August 31).

COPY

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

- Silt fencing or other sediment trapping materials will be installed at the downstream end of construction activities to minimize the transport of sediments off-site.
- The limits of disturbance, including the upstream, downstream, and lateral extents, will be clearly defined and marked in the field. Monitoring personnel will review the limits of disturbance prior to initiation of construction activities.
- Exotic species removed during construction will be properly handled to prevent sprouting or regrowth.
- Training of construction personnel will be provided.
- Ongoing monitoring and reporting will occur for the duration of the construction activity to ensure implementation of best management practices.
- When work is conducted during the fire season (as identified by the Riverside County Fire Department) adjacent to coastal sage scrub or chaparral vegetation, appropriate fire-fighting equipment (e.g., extinguishers, shovels, water tankers) shall be available on the site during all phases of project construction to help minimize the chance of human-caused wildfires. Shields, protective mats, and/or other fire preventative methods shall be used during grinding, welding, and other spark-inducing activities. Personnel trained in fire hazards, preventative actions, and responses to fires shall advise contractors regarding fire risk from all construction-related activities.
- Active construction areas shall be watered regularly to control dust and minimize impacts to adjacent vegetation.
- All equipment maintenance, staging, and dispensing of fuel, oil, coolant, or any other toxic substances shall occur only in designated areas within the proposed grading limits of the Proposed Project Site. These designated areas shall be clearly marked and located in such a manner as to contain run-off.
- Waste, dirt, rubble, or trash shall not be deposited in the Conservation Area or on native habitat.

4.4.5 Conclusion

Implementation of **Mitigation Measures BIO-1, BIO-2, BIO-3,** and **BIO-4** would reduce potential impacts of the Proposed Project associated with Biological Resources to less than significant.

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

COPY

4.5 Cultural Resources

Information and analysis in this section is derived from the documents incorporated by reference as identified in Section 1.3 of this document and the Phase I Archaeological and Paleontological Resources Inventory, prepared by Psomas, dated October 2023, and included as **Appendix C**, which includes an Eastern Information Center (EIC) cultural resources literature and records search, a Native American Heritage Commission (NAHC) Sacred Lands Files (SLF) database search, Western Science Center (WSC) Paleontological Record Search, and pedestrian field survey. A Historic Built Environment Assessment, prepared by South Environmental, is included in **Appendix C**.

4.5.1 Environmental Setting

The study in **Appendix C** included a records search through the EIC, intensive-level pedestrian field survey and paleontological resources overview. The EIC record search identified 14 prior cultural resources studies within 0.8 km (one-half mile) of the Proposed Project Site were completed between 1990 and 2014 and are identified on **Table 11: *Prior Cultural Studies Within ½-mile of the Project Site***. Two of the cultural resource studies (RI-06821 and RI-08160) traversed the Proposed Project Site. The 14 studies consisted of archaeological field studies and literature reviews (**Appendix C**).

Previously Recorded Cultural Resources

The EIC records searches also identified five previously recorded cultural resources within 0.8 km (1/2-mile) of the Proposed Project Site and are identified on **Table 12: Previously Recorded Cultural Resources Within ½ Mile of the Project Site** (**Appendix C**). The previously recorded resources include historic buildings and structures. No precontact cultural resources (before the arrival of Europeans) were identified by the EIC. None of the five historic buildings and structures are located within the Proposed Project Site.

Native American Heritage Commission Sacred Lands File Search

On September 19, 2022, Psomas requested that the NAHC conduct a search of its SLF database to determine if cultural resources important to Native Americans have been recorded in the Proposed Project Site or in the immediate vicinity. The results of the NAHC SLF search were received on November 22, 2022, and were negative; however, it should be noted that the records maintained by the NAHC, and the CHRIS are not exhaustive and a negative response to these searches does not preclude the existence of a tribal cultural resource. Furthermore, a tribe may be the only source of information regarding the existence of a tribal cultural resource. The review included a list of tribes affiliated with the Proposed Project Site. If these tribal governments have requested to be listed on the City's Assembly Bill (AB) 52 contact list the tribal governments will be contacted by the City and offered an opportunity to consult on the Project to comply with the requirements of AB 52. The SLF search results summary letter from the NAHC is provided in the Phase I Archaeological and Paleontological Resources Inventory (**Appendix C**).

Field Survey

Psomas cultural resource specialist Heather Garnett, RPA, surveyed the Proposed Project Site on February 9, 2023. The cultural resources field survey did not identify archaeological resources; however, it should be noted ground visibility was obscured by dense vegetation and recent flooding from rain. Additionally, the structures located on at the northern end of the Proposed Project Site date to 1940s. A separate historic built environment assessment of the structures and report has been prepared by South Environmental, included in the Phase I Archaeological and Paleontological Resources Inventory (**Appendix C**).

4.5.2 Impact Analysis

CEQA Thresholds	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact or Does Not Apply
CULTURAL RESOURCES: Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource as defined in 15064.5?			X	
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to 15064.5?		X		
c) Disturb any human remains, including those interred outside of formal cemeteries?		X		

COPY

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

Discussion

a) Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?

Less Than Significant Impact. Public Resources Code Section 15064.5(a) defines historical resources, which includes: A resource listed in, or determined to be eligible by the State Historical Resources Commission, for listing in the California Register of Historical Resources (Pub. Res. Code Section 5024.1, Title 14 CCR, Section 14 CCR, Section 4850 et seq.). The EIC record search results identified five cultural resources located within a half-mile of the Proposed Project Site. These resources consist of five historic-era buildings and associated structures that establish historic-era land use within the generalized area. None of the five cultural resources are within the Proposed Project Site; therefore, the proposed Project will not impact these cultural resources. One built environment resource over 45 years old was identified within the Proposed Project Site: a residential farm located at 710 Cawston Avenue North comprising several buildings and structures. The Proposed Project Site was recorded and evaluated for historical significance on the appropriate set of DPR Forms in consideration of CRHR and City designation criteria and integrity requirements. The Proposed Project Site was found not eligible under all State and local designation criteria due to a lack of significant historical associations, a lack of architectural merit, and compromised integrity. No historical resources were identified within the Proposed Project Site as a result of this analysis. Therefore, with respect to a historical resource pursuant to Section 15064.5, the proposed Project would not impact a historical resource under CEQA. No mitigation is required.

b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?

Less Than Significant Impact With Mitigation Incorporated. A significant impact would occur if grading or excavation activities associated with the Project were to disturb archaeological resources that presently exist within the Proposed Project Site. The EIC record search results identified five cultural resources located within one-half-mile of the Proposed Project Site. These resources consist of five historic-era buildings and associated structures that establish historic-era land use within the generalized area. None of the five cultural resources are archaeological resources. However, there is the possibility that undiscovered intact archaeological resources may be present below the surface in native (alluvial) sediments. These potential effects would be mitigated to a less than significant level with the implementation of **Mitigation Measure CUL-1**, which recommends archaeological monitoring when excavations are required in native sediment.

c) Disturb any human remains, including those interred outside of formal cemeteries?

Less than Significant Impact With Mitigation Incorporated. A significant adverse effect could occur if grading or excavation activities associated with the Project were to disturb previously interred human remains. The Proposed Project Site is located within a developed area that has been subject to earth-moving activities in the past, and no known burial sites are located on or adjacent to the Proposed Project Site. In the unlikely event of an unanticipated discovery of human remains in the Proposed Project Site during construction, the California Health and Safety Code and the California Public Resources Code require that any activity in the area of a potential find be halted and the Orange County Coroner be notified, as described in **Mitigation Measure CUL-2**. Implementation of CUL-2 would ensure impacts related to this threshold are less than significant, and no mitigation is required

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

COPY

4.5.3 Mitigation Measures

CUL-1 The Project proponent shall retain a Project Archaeologist prior to the initiation of ground-disturbing activities to monitor ground-disturbing activities occurring within native sediment (in situ material).

In the event that archaeological resources are discovered at the Proposed Project Site, the handling of the discovered resources shall occur, as described below. All artifacts discovered shall be inventoried and analyzed by the Project Archaeologist. If any artifacts of Native American origin are discovered, all activities in the immediate vicinity of the find (within a 50-foot radius) shall stop, and the Project Archaeologist shall notify the property owner and tribes identified by the NAHC as being affiliated with the area. The Project Archaeologist and Tribal Representative will analyze the Native American artifacts for identification as everyday life and/or religious or sacred items, cultural affiliation, temporal placement, and function, as deemed possible. The significance of Native American resources shall be evaluated in accordance with the provisions of CEQA and shall consider the religious beliefs, customs, and practices of the affiliated tribes. All items found in association with Native American human remains shall be considered grave goods or sacred in origin and subject to special handling.

Non-Native American artifacts shall be inventoried, assessed, and analyzed for cultural affiliation, personal affiliation (prior ownership), function, and temporal placement. After analysis and reporting, these artifacts shall be subjected to curation or returned to the property owner, as deemed appropriate.

Once grading activities have ceased or the Project Archaeologist, in consultation with the lead agency and Tribal Representative, determines that monitoring is no longer necessary, monitoring activities can be discontinued. A report of findings, including an itemized inventory of recovered artifacts, shall be prepared upon completion of the steps outlined above. A copy of the report shall also be filed with the EIC.

CUL-2 All discovered human remains shall be treated with respect and dignity. California State law (California Health & Safety Code Section 7050.5) and federal law and regulations ([*Archaeological Resources Protection Act 16 United States Code* (USC) 470 & 43 Code of Federal Regulations (CFR) 7], [*Native American Graves Protection & Repatriation Act* 25 USC 3001 & 43 CFR 10] and [Public Lands, Interior 43 CFR 8365.1–7]) require a defined protocol if human remains are discovered in the State of California regardless of whether the remains are modern or archaeological in origin.

If human remains, grave goods, ceremonial items, and/or sacred items are encountered, work will immediately halt within the immediate area and any nearby area reasonably suspected to overlie adjacent remains, and a 100-foot ESA boundary will be established to protect the find from impact, and the Soboba Band of Luiseno Indians and the City of San Jacinto Planning Division shall be immediately notified.

In accordance with Section 7050.5 of the California Health and Safety Code and CEQA Guidelines Section 15064.5(e), if human remains are found, the Riverside County Coroner's office shall be notified by the permittee within 24 hours of the discovery. County Coroner's determination regarding the origin of the remains and any required notification is described in Section 7050.5 of the California Health and Safety Code and CEQA Guidelines Section 15064.5(e). No further excavation or disturbance of the potential human remains, or any area reasonably suspected to overlie additional remains, shall occur until a determination

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

COPY

has been made, any notifications have been sent and received, and the Riverside County Coroner's Office has cleared the site.

4.5.4 Conclusion

Implementation of Mitigation Measure **CUL-1** and **CUL-2,** would reduce potential impacts of the Proposed Project associated with Cultural Resources to less than significant.

4.6 Energy

Information and analysis in this section is derived from the documents incorporated by reference as identified in Section 1.3 of this document and from the Air Quality, Greenhouse Gas, and Energy Impact Study prepared by MD Acoustics and dated April 28, 2025, and included as **Appendix A-1**.

Information from the CalEEMod 2022.1.1.22 Daily and Annual Outputs contained in **Appendix A-1** was utilized for this analysis, and the CalEEMod outputs detail Project related construction equipment, transportation energy demands, and facility energy demands.

4.6.1 Regulatory Setting

The discussion below provides a summary of key standards relative to this Project. A more detailed list of standards is provided in **Appendix A-1.**

Building Energy Efficiency Standards

California Code of Regulations (CCR) Title 24, Part 6. CCR Title 24, Part 6, which is California's Energy Efficiency Standards for Residential and Nonresidential Buildings (Title 24) was first established in 1978 in response to a legislative mandate to reduce California's energy consumption. The standards are updated periodically to allow consideration and possible incorporation of new energy efficiency technologies and methods.

The Energy Commission adopted 2008 Standards on April 23, 2008 and Building Standards Commission approved them for publication on September 11, 2008. These updates became effective on August 1, 2009. 2013 and 2016 standards have been approved and became effective July 1, 2014 and January 1, 2016, respectively.

California Code of Regulations (CCR) Title 24, Part 11, commonly referred to as the CALGreen Code, states that all buildings for which an application for a building permit is submitted on or after January 1, 2023 must follow the 2022 standards. Energy efficient buildings require less electricity; therefore, increased energy efficiency reduces fossil fuel consumption and decreases greenhouse gas emissions.

The CALGreen Code includes mandatory measures for non-residential development related to site development; energy efficiency; water efficiency and conservation; material conservation and resource efficiency; and environmental quality. Specifically, the code requires the following measures that are applicable to energy use:

- New buildings with tenant spaces that have 10 or more tenant-occupants to provide secure bicycle parking for 5 percent of the tenant-occupant vehicular parking spaces with a minimum of one bicycle parking facility.
- New buildings that require 10 or more parking spaces to provide a specific number of spaces to facilitate the future installation of electric vehicle supply equipment. The raceways are required to be installed at the time of construction.

Senate Bill 100

Senate Bill 100 (SB 100) was signed into law September 2018 and increased the goal of the California RPS Program to achieve at least 50 percent renewable resources by 2026, 60 percent renewable resources by 2030, and 100 percent renewable resources by 2045. SB 100 also includes a State policy that eligible renewable energy resources and zero-carbon resources supply 100 percent of all retail sales of electricity to California end-use customers and 100 percent of electricity procured to serve all State agencies by December 31, 2045. Under the bill, the State cannot increase carbon emissions elsewhere in the western grid or allow resource shuffling to achieve the 100 percent carbon-free electricity target.

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

COPY

4.6.2 Environmental Setting

California is one of the lowest per capita energy users in the United States, ranked 48th in the nation, due to its energy efficiency programs and mild climate (United States Energy Information Administration [EIA] 2018). California consumed 292,039 gigawatt-hours (GWh) of electricity and 2,110,829 million cubic feet of natural gas in 2017 (California Energy Commission [CEC] 2019; EIA 2018). In addition, Californians consume approximately 18.9 billion gallons of motor vehicle fuels per year (Federal Highway Administration 2019). The single largest end-use sector for energy consumption in California is transportation (39.8 percent), followed by industry (23.7 percent), commercial (18.9 percent), and residential (17.7 percent) (EIA 2018).

Most of California's electricity is generated in-state with approximately 30 percent imported from the Northwest (Alberta, British Columbia, Idaho, Montana, Oregon, South Dakota, Washington, and Wyoming) and Southwest (Arizona, Baja California, Colorado, Mexico, Nevada, New Mexico, Texas, and Utah) in 2017. In addition, approximately 30 percent of California's electricity supply comes from renewable energy sources such as wind, solar photovoltaic, geothermal, and biomass (CEC 2018). Adopted on September 10, 2018, SB 100 accelerates the State's Renewables Portfolio Standards Program by requiring electricity providers to increase procurement from eligible renewable energy resources to 33 percent of total retail sales by 2020, 60 percent by 2030, and 100 percent by 2045.

To reduce statewide vehicle emissions, California requires that all motorists use California Reformulated Gasoline, which is sourced almost exclusively from refineries located in California. Gasoline is the most used transportation fuel in California with 15.5 billion gallons sold in 2017 and is used by light-duty cars, pickup trucks, and sport utility vehicles (California Department of Tax and Fee Administration 2018). Diesel is the second most used fuel in California with 4.2 billion gallons sold in 2015 and is used primarily by heavy duty-trucks, delivery vehicles, buses, trains, ships, boats and barges, farm equipment, and heavy-duty construction and military vehicles (CEC 2016). Both gasoline and diesel are primarily petroleum-based, and their consumption releases greenhouse gas (GHG) emissions, including CO_2 and NO_X. The transportation sector is the single largest source of GHG emissions in California, accounting for 41 percent of all inventoried emissions in 2016 (California Air Resources Board [CARB] 2018).

4.6.3 Impact Analysis

CEQA Thresholds	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact or Does Not Apply
ENERGY: Would the project:				
a) Result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?			X	
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?			X	

Discussion

a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Less Than Significant Impact.

COPY

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

Construction Energy Demand

Construction Equipment Electricity Usage. Electrical service will be provided by SCE. Based on the 2017 National Construction Estimator, the typical power cost per 1,000 square feet of building construction per month is estimated to be $2.32. The energy analysis provided in **Appendix A-1** was prepared assuming project plans to develop the site with approximately 817,050 square feet of new residential space over the course of approximately 39 months. Based on **Table 13, *Project Construction Power Cost and Electricity Usage***, the total power cost of the on-site electricity usage during the construction of the Proposed Project is estimated to be approximately $73,926.68 and the total electricity usage from Project construction related activities is estimated to be approximately 1,344,122 kilowatt-hours (kWh).

Table 13: Project Construction Power Cost and Electricity Usage

Power Cost (per 1,000 square feet of building per month of construction)	Total Building Size (1,000 Square Foot)*	Construction Duration (months)	Total Project Construction Power Cost	Cost per kWh	Total Project Construction Electricity Usage (kWh)
$2.32	817.050	39	$73,926.68	$0.06	1,344,122

* Assumes the project will be under the GS-1 General Service rate under SCE.
Source: Appendix A-1

Construction Equipment Fuel Estimates. Using the CalEEMod data input, the Project's construction phase would consume electricity and fossil fuels as a single energy demand, that is, once construction is completed their use would cease. CARB's 2017 Emissions Factors Tables show that on average aggregate fuel consumption (gasoline and diesel fuel) would be approximately 18.5 horsepower hours per gallon (hp-hr/gal). As presented in **Table 14, *Construction Equipment Fuel Consumption Estimates*** below, the Proposed Project construction activities would consume an estimated 108,685 gallons of diesel fuel.

Table 14: Construction Equipment Fuel Consumption Estimates

Phase	Number of Days	Offroad Equipment Type	Amount	Usage Hours	Horse Power	Load Factor	HP hrs/ day	Total Fuel Consumption (gal diesel fuel)[1]
Demolition	30	Concrete/Industrial Saws	1	8	33	0.73	193	313

	75	Rollers	2	8	36	0.38	219	887
Architectural Coating	90	Air Compressors	1	6	37	0.48	107	518
Construction Fuel Demand (gallons of diesel fuel)								108,685

Notes:

[1] Using Carl Moyer Guidelines Table D-21 Fuel consumption rate factors (bhp-hr/gal) for engines less than 750 hp.

Construction Worker Fuel Estimates. It is assumed that all construction worker trips are from light duty autos (LDA) along area roadways. With respect to estimated vehicle miles travelled (VMT), the construction worker trips would generate an estimated 3,772,243 VMT. Vehicle fuel efficiencies for construction workers were estimated in the air quality and greenhouse gas analysis using information generated using CARB's EMFAC model (see **Appendix A-1** for details). **Table 15: *Construction Worker Fuel Consumption Estimates***, shows that an estimated 121,882 gallons of fuel would be consumed for construction worker trips.

Table 15: Construction Worker Fuel Consumption Estimates

Phase	Number of Days	Worker Trips/Day	Trip Length (miles)	Vehicle Miles Traveled	Average Vehicle Fuel Economy (mpg)	Estimated Fuel Consumption (gallons)
Demolition	30	15.0	18.5	8,325	30.95	269
Site Preparation	40	17.5	18.5	12,950	30.95	418
Grading	110	20.0	18.5	40,700	30.95	1,315
Building Construction	500	385.0	18.5	3,561,250	30.95	115,065
Paving	75	15.0	18.5	20,813	30.95	672
Architectural Coating	90	77.0	18.5	128,205	30.95	4,142
Total Construction Worker Fuel Consumption						121,882

Notes:

1 Assumptions for the worker trip length and vehicle miles traveled are consistent with CalEEMod 2022.1.1.22 defaults.

Construction Vendor/Hauling Fuel Estimates. **Table 16: *Construction Vendor Fuel Consumption Estimates (MHD Trucks)*** and **Table 17: *Construction Hauling Fuel Consumption Estimates (HHD Trucks)*** show the estimated fuel consumption for vendor and hauling during building construction and architectural coating. With respect to estimated VMT, the vendor and hauling trips would generate an estimated 1,000,455 VMT. For the architectural coatings it is assumed that the contractors would be responsible for bringing coatings and equipment with them in their light duty vehicles. Table 16 and Table 17 show that an estimated 134,056 gallons of fuel would be consumed for vendor and hauling trips.

Total Construction Hauling Fuel Consumption						94,976

Notes:
1 Assumptions for hauling trip length and vehicle miles traveled are consistent with CalEEMod 2022.1.1.22 defaults.

Construction Energy Efficiency/Conservation Measures. Construction equipment used over the approximately 39 month construction phase would conform to CARB regulations and California emissions standards and is evidence of related fuel efficiencies. In addition, the CARB Airborne Toxic Control Measure limits idling times of construction vehicles to no more than five minutes, thereby minimizing unnecessary and wasteful consumption of fuel due to unproductive idling of construction equipment. Furthermore, the Project has been designed in compliance with California's Energy Efficiency Standards and 2022 California Green Building Standards Code, Title 24, Part 11 (CALGreen).

Construction of the proposed residential development would require the typical use of energy resources. There are no unusual Project characteristics or construction processes that would require the use of equipment that would be more energy intensive than is used for comparable activities or equipment that would not conform to current emissions standards (and related fuel efficiencies). Therefore, the proposed construction activities would not result in inefficient, wasteful, or unnecessary fuel consumption and no mitigation is required.

Operational Energy Demand

Transportation Fuel Consumption. The largest source of operational energy use would be vehicle operation of customers. The site is located in an urbanized area just in close proximity to transit stops.

COPY

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

Using the CalEEMod output, it is assumed that an average trip length would be 9.944 miles. To show a worst-case analysis, as the Proposed Project is a residential project, it was assumed that vehicles would operate 365 days per year. **Table 18: *Estimated Vehicle Operations Fuel Consumption***, shows the worst-case estimated annual fuel consumption for all classes of vehicles from autos to heavy-heavy trucks. Table 18 shows that an estimated 571,336 gallons of fuel would be consumed per year for the operation of the proposed Project.

Table 18: Estimated Vehicle Operations Fuel Consumption

Vehicle Type	Vehicle Mix	Number of Vehicles	Average Trip (miles)[2]	Daily VMT	Average Fuel Economy (mpg)	Total Gallons per Day	Total Annual Fuel Consumption (gallons)
Light Auto	Automobile	2,194	9.944	21,813	31.82	685.52	250,215
Light Truck	Automobile	229	9.944	2,280	27.16	83.96	30,645

Total		3,952	--	39,298	--	1565.30	--
Total Annual Fuel Consumption							571,336

Notes:
1 The project is to generate 3,952 total net new trips after reduction of existing uses. Default CalEEMod vehicle fleet mix utilized.
2 Based on the size of the site and relative location, trips were assumed to be local rather than regional.

Trip generation generated by the proposed Project are consistent with other similar residential uses of similar scale and configuration as reflected in the traffic data. That is, the Proposed Project does not propose uses or operations that would inherently result in excessive and wasteful vehicle trips, nor associated excess and wasteful vehicle energy consumption. Therefore, Project transportation energy consumption would not be considered inefficient, wasteful, or otherwise unnecessary.

Facility Energy Demands (Electricity)

The annual electricity demands were provided per the CalEEMod output and are provided in **Table 19: *Project Unmitigated Annual Operational Energy Demand Summary***. The Project will be 100 percent electric and will not require natural gas.

Table 19: Project Unmitigated Annual Operational Energy Demand Summary

Electricity Demand	kWh/year
Single Family Housing	8,280,326
Total	8,280,326

Notes:
1 Taken from the CalEEMod 2022.1.1.22 annual output.

As shown in Table 19, the estimated electricity demand for the Proposed Project is approximately 8,280,326 kWh per year. In 2022, the residential sector of the County of Riverside consumed approximately 9,061 million kWh of electricity. Therefore, the increase in electricity demand from the proposed Project is insignificant compared to the County's 2022 demand. However, electricity for the

COPY

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

homes in the Project will also be provided by onsite solar which will not affect the County's demand. Therefore, the increase in electricity demand from the proposed Project is insignificant compared to the County's 2022 demand, and impacts would be less than significant. No mitigation is required.

b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

Less Than Significant Impact. This analysis considers whether the Project would conflict with applicable federal transportation regulations, the State's Energy Plan, and the State's Renewable Energy Portfolio Standards.

Regarding federal transportation regulations, the Proposed Project Site is located in an already developed area. Access to/from the Proposed Project Site is from existing roads. These roads are already in place so the Project would not interfere with, nor otherwise obstruct intermodal transportation plans or Projects that may be proposed pursuant to the Intermodal Surface Transportation Efficiency Act of 1991 (ISTEA) because SCAG is not planning for intermodal facilities in the Project area.

Regarding the State's Energy Plan and compliance with Title 24 CCR energy efficiency standards, the applicant is required to comply with the California Green Building Standard Code requirements for energy efficient buildings and appliances as well as utility energy efficiency programs implemented by the SCE and Southern California Gas Company.

Regarding the State's Renewable Energy Portfolio Standards, the Project would be required to meet or exceed the energy standards established in the CALGreen Code. CALGreen Standards require that new buildings reduce water consumption, employ building commissioning to increase building system efficiencies, divert construction waste from landfills, and install low pollutant-emitting finish materials. Therefore, the Project would not conflict with or obstruct a State or the General Plan policies for energy efficiency, and less than significant impacts would occur. No mitigation is required.

4.6.4 Mitigation Measures

No mitigation measures associated with impacts to Energy apply to the Proposed Project.

4.6.5 Conclusion

There would be less than significant of the Proposed Project associated with Energy resources, and no mitigation would be required.

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

4.7 Geology and Soils

4.7.1 Environmental Setting

Information and analysis in this section is derived from the documents incorporated by reference as identified in Section 1.3 of this document and from an updated, Project-specific Preliminary Geotechnical Investigation (Geotechnical Evaluation) prepared by Geocon West Inc., dated November 4, 2022, and included as **Appendix D-1**. An updated geotechnical evaluation was prepared in January 2024 and it is provided in **Appendix D-2**.

4.7.2 Impact Analysis

CEQA Thresholds	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact or Does Not Apply
GEOLOGY AND SOILS: Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
• Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.			X	
• Strong seismic ground shaking?			X	
• Seismic-related ground failure, including liquefaction?			X	
• Landslides?				X
b) Result in substantial soil erosion or the loss of topsoil?			X	
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- site or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?			X	
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?			X	
e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?				X
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?		X		

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

COPY

Discussion

a) *Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:*

- *Rupture of a known earthquake fault, as delineated on the most recent Alquist Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.*

  Less Than Significant Impact. According to the Geotechnical Evaluation, the Proposed Project Site is not located within a currently established State of California Alquist-Priolo Earthquake Fault Zone or Riverside County Fault Hazard Zone for surface fault rupture hazards (**Appendix D-1**). No active or potentially active faults with the potential for surface fault rupture are known to pass directly beneath the site. Therefore, impacts would be less than significant, and no mitigation is required.

- *Strong seismic ground shaking?*

  Less Than Significant Impact. The Proposed Project Site is located in a seismically active area, as is the majority of southern California, and there is potential for strong ground motion in the Project areas during the Project's lifetime. The closest active fault to the site is the Casa Loma branch of the San Jacinto fault located approximately ¾ mile northeast of the site. This fault, among others within the area, would have the potential to produce an earthquake estimated up to 6.9 on the Richter Scale (**Appendix D**). In the event an earthquake of this magnitude occurs, the Proposed Project Site could experience periodic shaking, possibly of considerable intensity. The Project's proposed structures would be required to meet the City's construction development standards and the seismic design parameters of the California Uniform Building Code to withstand potential seismic shaking impacts caused by an earthquake within an acceptable level of risk. In addition, the specific recommendations of the Geotechnical Evaluation prepared for the Project would be fully incorporated in the design and construction of the Project. Compliance with the California Uniform Building Code Seismic Safety Standards and Geotechnical Investigation recommendations would minimize risks related to seismic shaking impacts and reduce the potential for adverse effects to less than significant, and no mitigation is required.

- *Seismic related ground failure, including liquefaction?*

  Less Than Significant Impact. Liquefaction is a phenomenon in which loose, saturated, relatively cohesionless soil deposits lose shear strength during strong ground motions. Primary factors controlling liquefaction include intensity and duration of ground motion, gradation characteristics of the subsurface soils, in-situ stress conditions, and the depth to groundwater. Liquefaction is typified by a loss of shear strength in the liquefied layers due to rapid increases in pore water pressure generated by earthquake accelerations. The County of Riverside indicates that the site is located within a zone of moderate liquefaction potential. However, based on historic well records, static groundwater is more than 100 feet below ground surface in the vicinity of the site and the Geotechnical Investigation concluded the potential for liquefaction to occur beneath the site is considered very low (**Appendix D**). In addition, the specific recommendations of the Geotechnical Evaluation prepared for the Project would be fully incorporated in the design and construction of the Project. Therefore, impacts related to liquefaction would be less than significant levels, and no mitigation is required.

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

COPY

- *Landslides?*

  No Impact. Landslides may be induced by strong vibratory motion produced by earthquakes. The Proposed Project Site would not be subject to landslides. According to the California Department of Conservation Earthquake Zones of Required Investigation mapper (CDC 2024), the Proposed Project Site is not identified as being within an area susceptible to landslides. The Proposed Project Site is relatively flat, with elevations ranging from 1,505 feet above mean sea level (AMSL) on the northwestern portion of the site to approximately 1,515 feet AMSL on the southwestern corner of the site. In addition, the specific recommendations of the Geotechnical Evaluation prepared for the Project, including slope stability features, would be fully incorporated in the design and construction of the Project. Due to the relatively low topography, and since the Project does not propose to create slopes or features that would increase the potential for landslides, no adverse impacts are anticipated, and no mitigation is required.

Based on the above, the Project will have a less than significant impact regarding exposure people or structures to potential substantial adverse effects of earthquakes, ground shaking, liquefaction and landsides, and no mitigation is required.

b) Result in substantial soil erosion or the loss of topsoil?

Less Than Significant Impact. The largest source of erosion and topsoil loss is uncontrolled drainage during construction. As discussed in more detail in Section XI, Hydrology and Water Quality, the National Pollutant Discharge Elimination System (NPDES) permit program controls water pollution by regulating point sources that discharge pollutants into "waters of the U.S." Construction activities shall be conducted in compliance with the statewide NPDES General Permit for Storm Water Discharges Associated with the Construction and Land Disturbance Activities (Order No 2022-0057-DWQ, NPDES No. CAS000002), adopted by the State Water Resources Control Board on September 8, 2022. In compliance with the NPDES permit, erosion potential during construction of the proposed Project would be managed with Best Management Practices (BMPs) implemented on the Proposed Project Site as part of a Storm Water Pollution Prevention Plan (SWPPP) during construction activities in accordance with NPDES requirements. Implementation of the BMPs would reduce construction-related erosion impacts to less than significant levels. Additionally, the specific recommendations of the Geotechnical Evaluation prepared for the Project, including grading and earthwork related recommendations, would be fully incorporated in the design and construction of the Project. Therefore, impacts related to soil erosion would be less than significant, and no mitigation is required.

c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?

Less Than Significant Impact. As discussed above, the potential for liquefaction at the Proposed Project Site is considered low and the Proposed Project Site is not located in a potential landslide zone. The proposed Project would not introduce any new topographical features or elements that would change the existing geologic setting of the Project area, and the majority of the area is relatively flat. As such, on-site geologic and soils issues such as on-site soil stability including landslides, lateral spreading, liquefaction, and collapse are not significant due to the nature of the Project. The report in **Appendix D-2** also identified that the potential for subsidence was low because: the site is not located in an Area of Land Subsidence in California according to the United States Geological Survey (USGS); the San Jacinto Valley is not included in an area currently undergoing a USGS subsidence study; Riverside County does include the site in an area of active subsidence; the California Geological Survey does not address subsidence risk on its website; and a search of the City of the San Jacinto website GIS system did not yield results when the term "subsidence" was searched. Additionally, the specific

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

COPY

recommendations of the Geotechnical Investigation prepared for the Project (**Appendix D-1** and **Appendix D-2**) would be fully incorporated in the design and construction of the Project. Therefore, implementation of the proposed Project would not result in impacts associated with unstable geologic conditions. Impacts related to geologic unit stability that could result in lateral spreading, subsidence, liquefaction, or collapse would be less than significant. No mitigation is required.

d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?

Less Than Significant Impact. Expansive soils are characterized by their ability to undergo significant volume changes (shrink or swell) due to variations in moisture content the onsite fill consists of sandy silt within the soils encountered near the ground surface. Expansive soils are a contributing factor to building foundation settlement. According to the Geotechnical Evaluation, the upper five feet of existing site soils encountered during the investigation were considered to have a "very low" expansive potential and are classified as "non-expansive" (**Appendix D-1**). Additionally, the specific recommendations of the Geotechnical Evaluation prepared for the Project would be fully incorporated in the design and construction of the Project. Therefore, Project impacts related to expansive soils would be less than significant, and no mitigation is required.

e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

No Impact. The Project does not propose to install septic tanks or alternative wastewater disposal systems. No impacts would occur, and no mitigation is required.

f) Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Less Than Significant Impact With Mitigation Incorporated. Psomas requested a literature and records search from the WSC on November 21, 2022 (refer to the *Phase I Archaeological and Paleontological Resources Inventory* in **Appendix C**). The WSC houses records regarding paleontological resources recorded in Riverside County. The records search included a 1.6-km (1-mile) search radius around the Proposed Project Site and consisted of a detailed examination of the USGS' 7.5-minute Lakeview Quadrangle. The purpose of the literature search was to identify paleontological resources and/or unique geological units previously recorded within and around the Proposed Project Site. The WSC paleontological literature review and record searches did not identify paleontological resources within the Proposed Project Site or the 1-mile search buffer/radius. Furthermore, the WSC noted that the geologic units underlying the Proposed Project Site are mapped entirely as active valley deposits dating to the Holocene which is estimated to be between 5,000 years old and present. While Holocene alluvial units are of high preservation value, material found is unlikely to be fossil material due to the relatively modern associated dates of the deposits. However, the WSC also noted that if development requires any substantial depth of disturbance, the likelihood of reaching older Holocene or Late Pleistocene alluvial sediments would increase. The paleontological search results summary letter from WSC is presented in **Appendix C**.

Psomas surveyed the Proposed Project Site on February 9, 2023. The results of the field survey were negative for paleontological resources. However, the negative results only include an examination of the surface. Therefore, there is a possibility that intact paleontological resources may be present below the surface. A significant impact could occur if grading or excavation activities associated with the Project were to disturb paleontological resources that presently exist within the Project site. These potential effects may be mitigated to a less than significant level with the implementation of **Mitigation Measure GEO-1**, which requires retention of a qualified Paleontologist to be available "on-call"

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

COPY

throughout the duration of grading activities, would reduce potential impacts to less than significant levels.

4.7.3 Mitigation Measures

GEO-1 In the event that potential paleontological resources are discovered during ground-disturbing activities, work will stop in that area and within 30 feet of the find until a qualified paleontologist can assess the significance of the find and, if necessary, develop appropriate treatment measures. Treatment measures may include monitoring by a qualified paleontologist during construction-related ground- disturbing activities. The monitor will retain the option to reduce monitoring if it is determined that the sediments were previously disturbed. Monitoring may also be reduced if potentially fossiliferous units are not present or, if present, are determined to have a low potential to contain fossil resources. The monitor will be equipped to salvage fossils and samples of sediments as they are unearthed and will be empowered to temporarily halt or divert equipment to allow removal of abundant or large specimens. Recovered specimens will be prepared to a point of identification and permanent preservation, including washing of sediments to recover small invertebrates and vertebrates. Specimens will be curated into a professional, accredited museum repository with permanent retrievable storage. A report of findings, with an appended itemized inventory of specimens, will be prepared and will signify completion of the mitigation.

4.7.4 Conclusion

Implementation of **Mitigation Measure GEO-1** would reduce potential impacts of the Proposed Project associated with Geology and Soils to less than significant.

4.8 Greenhouse Gas Emissions

Information and analysis in this section is derived from the documents incorporated by reference as identified in Section 1.3 of this document and the Greenhouse Gas Analysis prepared for the Project as part of the Air Quality, Greenhouse Gas, and Energy Impact Study (**Appendix A-1**), and all information in this section is derived from **Appendix A-1**.

4.8.1 Environmental Setting

Constituent gases of the Earth's atmosphere, called atmospheric GHGs, play a critical role in the Earth's radiation amount by trapping infrared radiation emitted from the Earth's surface, which otherwise would have escaped to space. Prominent greenhouse gases contributing to this process include carbon dioxide (CO_2), methane (CH_4), ozone, water vapor, nitrous oxide (N_2O), and chlorofluorocarbons (CFCs). This phenomenon, known as the Greenhouse Effect, is responsible for maintaining a habitable climate. Anthropogenic (caused or produced by humans) emissions of these greenhouse gases in excess of natural ambient concentrations are responsible for the enhancement of the Greenhouse Effect and have led to a trend of unnatural warming of the Earth's natural climate, known as global warming or climate change. Emissions of gases that induce global warming are attributable to human activities associated with industrial/manufacturing, agriculture, utilities, transportation, and residential land uses. Transportation is responsible for 41 percent of the State's greenhouse gas emissions, followed by electricity generation. Emissions of CO_2 and N_2O are byproducts of fossil fuel combustion. Methane, a potent greenhouse gas, results from off-gassing associated with agricultural practices and landfills. Sinks of CO_2, where CO_2 is stored outside of the atmosphere, include uptake by vegetation and dissolution into the ocean. **Table 20: *GHG Descriptions***, provides a description of each of the greenhouse gases and their global warming potential.

Table 20: GHG Descriptions

Greenhouse Gas	Description and Physical Properties	Sources
Nitrous oxide	Nitrous oxide (N_2O), also known as laughing gas is a colorless gas. It has a lifetime of 114 years. Its global warming potential is 298.	Microbial processes in soil and water, fuel combustion, and industrial processes. In addition to agricultural sources, some industrial processes (nylon production, nitric acid production) also emit N_2O.
Methane	Methane (CH_4) is a flammable gas and is the main component of natural gas. It has a lifetime of 12 years. Its global warming potential is 25.	A natural source of CH4 is from the decay of organic matter. Methane is extracted from geological deposits (natural gas fields). Other sources are from the decay of organic material in landfills, fermentation of manure, and cattle farming.
Carbon dioxide	Carbon dioxide (CO_2) is an odorless, colorless, natural greenhouse gas. Carbon dioxide's global warming potential is 1. The concentration in 2005 was 379 parts per million (ppm), which is an increase of about 1.4 ppm per year since 1960.	Natural sources include decomposition of dead organic matter; respiration of bacteria, plants, animals, and fungus; evaporation from oceans; and volcanic outgassing. Anthropogenic sources are from burning coal, oil, natural gas, and wood.

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

COPY

Greenhouse Gas	Description and Physical Properties	Sources
Chlorofluorocarbons	CFCs are nontoxic, nonflammable, insoluble, and chemically unreactive in the troposphere (the level of air at the earth's surface). They are gases formed synthetically by replacing all hydrogen atoms in methane or methane with chlorine and/or fluorine atoms. Global warming potentials range from 3,800 to 8,100.	Chlorofluorocarbons were synthesized in 1928 for use as refrigerants, aerosol propellants, and cleaning solvents. They destroy stratospheric ozone, therefore their production was stopped as required by the Montreal Protocol.
Hydrofluorocarbons	Hydrofluorocarbons (HFCs) are a group of greenhouse gases containing carbon, chlorine, and at least one hydrogen atom. Global warming potentials range from 140 to 11,700.	Hydrofluorocarbons are synthetic manmade chemicals used as a substitute for chlorofluorocarbons in applications such as automobile air conditioners and refrigerants.
Perfluorocarbons	Perfluorocarbons (PFCs) have stable molecular structures and only break down by ultraviolet rays about 60 kilometers above the Earth's surface. They have a lifetime 10,000 to 50,000 years. They have a global warming potential range of 6,200 to 9,500.	Two main sources of perfluorocarbons are primary aluminum production and semiconductor manufacturing.
Sulfur hexafluoride	Sulfur hexafluoride (SF6) is an inorganic, odorless, colorless, and nontoxic, nonflammable gas. It has a lifetime of 3,200 years. It has a high global warming potential, 23,900.	This gas is manmade and used for insulation in electric power transmission equipment, in the magnesium industry, in semiconductor manufacturing, and as a tracer gas for leak detection.

Source: MD Acoustics 2024.

4.8.2 Regulatory Background

Federal

Greenhouse Gas Endangerment**.** On December 2, 2009, the EPA announced that GHGs threaten the public health and welfare of the American people. The EPA also states that GHG emissions from on-road vehicles contribute to that threat. The decision was based on Massachusetts v. EPA (Supreme Court Case 05-1120) which argued that GHGs are air pollutants covered by the Clean Air Act and that the EPA has authority to regulate those emissions.

Clean Vehicles**.** Congress first passed the Corporate Average Fuel Economy law in 1975 to increase the fuel economy of cars and light duty trucks. The law has become more stringent over time. On May 19, 2009, President Obama put in motion a new national policy to increase fuel economy for all new cars and trucks sold in the United States. On April 1, 2010, the EPA and the Department of Transportation's National Highway Safety Administration announced a joint final rule establishing a national program that would reduce greenhouse gas emissions and improve fuel economy for new cars and trucks sold in the United States.

The first phase of the national program would apply to passenger cars, light-duty trucks, and medium-duty passenger vehicles, covering model years 2012 through 2016. They require these vehicles to meet an estimated combined average emissions level of 250 grams of carbon dioxide per mile, equivalent to 35.5 miles per gallon if the automobile industry were to meet this carbon dioxide level solely through fuel economy improvements. Together, these standards would cut carbon dioxide emissions by an estimated 960 million metric tons and 1.8 billion barrels of oil over the lifetime of the vehicles sold under the program (model years

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

COPY

2012-2016). The second phase of the national program would involve proposing new fuel economy and greenhouse gas standards for model years 2017-2025 by September 1, 2011.

On October 25, 2010, the EPA and the U.S. Department of Transportation proposed the first national standards to reduce greenhouse gas emissions and improve fuel efficiency of heavy- duty trucks and buses. For combination tractors, the agencies are proposing engine and vehicle standards that begin in the 2014 model year and achieve up to a 20 percent reduction in carbon dioxide emissions and fuel consumption by the 2018 model year. For heavy-duty pickup trucks and vans, the agencies are proposing separate gasoline and diesel truck standards, which phase in starting in the 2014 model year and achieve up to a 10 percent reduction for gasoline vehicles and 15 percent reduction for diesel vehicles by 2018 model year (12 and 17 percent respectively if accounting for air conditioning leakage). Lastly, for vocational vehicles, the agencies are proposing engine and vehicle standards starting in the 2014 model year which would achieve up to a 10 percent reduction in fuel consumption and carbon dioxide emissions by 2018 model year.

Mandatory Reporting of Greenhouse Gases**.** On January 1, 2010, the EPA started requiring large emitters of heat-trapping emissions to begin collecting GHG data under a new reporting system. Under the rule, suppliers of fossil fuels or industrial greenhouse gases, manufacturers of vehicles and engines, and facilities that emit 25,000 metric tons or more per year of greenhouse gas emissions are required to submit annual reports to the EPA.

Climate Adaption Plan. The EPA Plan identifies priority actions the Agency will take to incorporate considerations of climate change into its programs, policies, rules and operations to ensure they are effective under future climatic conditions.

State

California Code of Regulations (CCR) Title 24, Part 6. CCR Title 24, Part 6: California's Energy Efficiency Standards for Residential and Nonresidential Buildings (Title 24) were first established in 1978 in response to a legislative mandate to reduce California's energy consumption. The standards are updated periodically to allow consideration and possible incorporation of new energy efficiency technologies and methods. Although it was not originally intended to reduce GHG emissions, electricity production by fossil fuels results in GHG emissions and energy efficient buildings require less electricity. Therefore, increased energy efficiency results in decreased GHG emissions.

The Energy Commission adopted 2008 Standards on April 23, 2008 and Building Standards Commission approved them for publication on September 11, 2008. These updates became effective on August 1, 2009. 2013 and 2016 standards have been approved and became effective July 1, 2014 and January 1, 2016, respectively.

California Code of Regulations (CCR) Title 24, Part 11. All buildings for which an application for a building permit is submitted on or after January 1, 2023 must follow the 2022 standards. Energy efficient buildings require less electricity; therefore, increased energy efficiency reduces fossil fuel consumption and decreases greenhouse gas emissions.

California Green Building Standards**.** On January 12, 2010, the State Building Standards Commission unanimously adopted updates to the California Green Building Standards Code, which went into effect on January 1, 2011. The Housing and Community Development (HCD) updated CALGreen through the 2015 Triennial Code Adoption Cycle, during the 2016 to 2017 fiscal year. During the 2022-2023 fiscal year, the HCD updated CALGreen through the 2023 Triennial Code Adoption Cycle.

The Code is a comprehensive and uniform regulatory code for all residential, commercial and school buildings. CCR Title 24, Part 11: California Green Building Standards (Title 24) became effective in 2001 in response to continued efforts to reduce GHG emissions associated with energy consumption. CCR Title 24,

COPY

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

Part 11 now require that new buildings reduce water consumption, employ building commissioning to increase building system efficiencies, divert construction waste from landfills, and install low pollutant-emitting finish materials. One focus of CCR Title 24, Part 11 is water conservation measures, which reduce GHG emissions by reducing electrical consumption associated with pumping and treating water. CCR Title 24, Part 11 has approximately 52 nonresidential mandatory measures and an additional 130 provisions for optional use. Some key mandatory measures for commercial occupancies include specified parking for clean air vehicles, a 20 percent reduction of potable water use within buildings, a 50 percent construction waste diversion from landfills, use of building finish materials that emit low levels of volatile organic compounds, and commissioning for new, nonresidential buildings over 10,000 square feet.

The CEC estimates that over 30 years the 2022 Energy Code will provide $1.5 billion in consumer benefits and reduce 10 million metric tons of GHG. Changes compared to the 2019 Energy Code include increases to on-site renewable energy generation from solar, increases to electric load flexibility to support grid reliability, reduction of emissions from newly constructed buildings, reduction of air pollution for improved public health, and increased adoption of environmentally beneficial efficient electric technologies.

The California Green Building Standards Code does not prevent a local jurisdiction from adopting a more stringent code as state law provides methods for local enhancements. The Code recognizes that many jurisdictions have developed existing construction and demolition ordinances, and defers to them as the ruling guidance provided, they provide a minimum 50- percent diversion requirement. The code also provides exemptions for areas not served by construction and demolition recycling infrastructure. State building code provides the minimum standard that buildings need to meet in order to be certified for occupancy.

Executive Order S-3-05**.** California Governor issued Executive Order S-3-05, GHG Emission, in June 2005, which established the following targets:

- By 2010, California shall reduce greenhouse gas emissions to 2000 levels;
- By 2020, California shall reduce greenhouse gas emissions to 1990 levels.
- By 2050, California shall reduce greenhouse gas emissions to 80 percent below 1990 levels.

The executive order directed the secretary of the California Environmental Protection Agency (CalEPA) to coordinate a multi-agency effort to reduce GHG emissions to the target levels. To comply with the Executive Order, the secretary of CalEPA created the California Climate Action Team (CAT), made up of members from various state agencies and commissions. The team released its first report in March 2006. The report proposed to achieve the targets by building on the voluntary actions of businesses, local governments, and communities and through State incentive and regulatory programs.

Executive Order S-01-07**.** Executive Order S-1-07 was issued in 2007 and proclaims that the transportation sector is the main source of GHG emissions in the State, since it generates more than 40 percent of the State's GHG emissions. It establishes a goal to reduce the carbon intensity of transportation fuels sold in the State by at least ten percent by 2020. This Order also directs CARB to determine whether this Low Carbon Fuel Standard (LCFS) could be adopted as a discrete early-action measure as part of the effort to meet the mandates in AB 32.

On April 23, 2009, CARB approved the proposed regulation to implement the low carbon fuel standard. The low carbon fuel standard is anticipated to reduce GHG emissions by about 16 million metric tons (MMT) per year by 2020. The low carbon fuel standard is designed to provide a framework that uses market mechanisms to spur the steady introduction of lower carbon fuels. The framework establishes performance standards that fuel producers and importers must meet each year beginning in 2011. Separate standards are established for gasoline and diesel fuels and the alternative fuels that can replace each. The standards are "back-loaded," with more reductions required in the last five years, than the first five years. This schedule

COPY

allows for the development of advanced fuels that are lower in carbon than today's fuels and the market penetration of plug- in hybrid electric vehicles, battery electric vehicles, fuel cell vehicles, and flexible fuel vehicles. It is anticipated that compliance with the low carbon fuel standard will be based on a combination of both lower carbon fuels and more efficient vehicles.

Reformulated gasoline mixed with corn-derived ethanol at ten percent by volume and low sulfur diesel fuel represent the baseline fuels. Lower carbon fuels may be ethanol, biodiesel, renewable diesel, or blends of these fuels with gasoline or diesel as appropriate. Compressed natural gas and liquefied natural gas also may be low carbon fuels. Hydrogen and electricity, when used in fuel cells or electric vehicles are also considered as low carbon fuels for the low carbon fuel standard.

SB 97. Senate Bill 97 (SB 97) was adopted August 2007 and acknowledges that climate change is a prominent environmental issue that requires analysis under CEQA. SB 97 directed the Governor's Office of Planning and Research (OPR), which is part of the State Resource Agency, to prepare, develop, and transmit to CARB guidelines for the feasible mitigation of GHG emissions or the effects of GHG emissions, as required by CEQA, by July 1, 2009. The Resources Agency was required to certify and adopt those guidelines by January 1, 2010.

Pursuant to the requirements of SB 97 as stated above, on December 30, 2009 the Natural Resources Agency adopted amendments to the CEQA guidelines that address GHG emissions. The CEQA Guidelines Amendments changed 14 sections of the CEQA Guidelines and incorporate GHG language throughout the Guidelines. However, no GHG emissions thresholds of significance are provided and no specific mitigation measures are identified. The GHG emission reduction amendments went into effect on March 18, 2010 and are summarized below:

- Climate action plans and other greenhouse gas reduction plans can be used to determine whether a project has significant impacts, based upon its compliance with the plan.
- Local governments are encouraged to quantify the greenhouse gas emissions of proposed projects, noting that they have the freedom to select the models and methodologies that best meet their needs and circumstances. The section also recommends consideration of several qualitative factors that may be used in the determination of significance, such as the extent to which the given project complies with state, regional, or local GHG reduction plans and policies. OPR does not set or dictate specific thresholds of significance. Consistent with existing CEQA Guidelines, OPR encourages local governments to develop and publish their own thresholds of significance for GHG impacts assessment.
- When creating their own thresholds of significance, local governments may consider the thresholds of significance adopted or recommended by other public agencies, or recommended by experts.
- New amendments include guidelines for determining methods to mitigate the effects of greenhouse gas emissions in Appendix F of the CEQA Guidelines.
- OPR is clear to state that "to qualify as mitigation, specific measures from an existing plan must be identified and incorporated into the project; general compliance with a plan, by itself, is not mitigation."
- OPR's emphasizes the advantages of analyzing GHG impacts on an institutional, programmatic level. OPR therefore approves tiering of environmental analyses and highlights some benefits of such an approach.
- Environmental impact reports (EIRs) must specifically consider a project's energy use and energy efficiency potential.

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

COPY

AB 32. The California State Legislature enacted AB 32, the California Global Warming Solutions Act of 2006. AB 32 requires that greenhouse gases emitted in California be reduced to 1990 levels by the year 2020. "Greenhouse gases" as defined under AB 32 include carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride. ARB is the state agency charged with monitoring and regulating sources of greenhouse gases. AB 32 states the following:

Global warming poses a serious threat to the economic well-being, public health, natural resources, and the environment of California. The potential adverse impacts of global warming include the exacerbation of air quality problems, a reduction in the quality and supply of water to the state from the Sierra snowpack, a rise in sea levels resulting in the displacement of thousands of coastal businesses and residences, damage to marine ecosystems and the natural environment, and an increase in the incidences of infectious diseases, asthma, and other human health-related problems.

The ARB Board approved the 1990 greenhouse gas emissions level of 427 million metric tons of carbon dioxide equivalent ($MTCO_2e$) on December 6, 2007 (CARB 2007). Therefore, emissions generated in California in 2020 are required to be equal to or less than 427 million $MTCO_2e$. Emissions in 2020 in a "business as usual" scenario are estimated to be 596 million $MTCO_2e$.

Under AB 32, the ARB published its Final Expanded List of Early Action Measures to Reduce Greenhouse Gas Emissions in California. Discrete early action measures are currently underway or are enforceable by January 1, 2010. The ARB has 44 early action measures that apply to the transportation, commercial, forestry, agriculture, cement, oil and gas, fire suppression, fuels, education, energy efficiency, electricity, and waste sectors. Of these early action measures, nine are considered discrete early action measures, as they are regulatory and enforceable by January 1, 2010. The ARB estimates that the 44 recommendations are expected to result in reductions of at least 42 million $MTCO_2e$ by 2020, representing approximately 25 percent of the 2020 target.

The ARB's Climate Change Scoping Plan (Scoping Plan) contains measures designed to reduce the State's emissions to 1990 levels by the year 2020 (CARB 2008). The Scoping Plan identifies recommended measures for multiple greenhouse gas emission sectors and the associated emission reductions needed to achieve the year 2020 emissions target—each sector has a different emission reduction target. Most of the measures target the transportation and electricity sectors. As stated in the Scoping Plan, the key elements of the strategy for achieving the 2020 greenhouse gas target include:

- Expanding and strengthening existing energy efficiency programs as well as building and appliance standards;
- Achieving a statewide renewables energy mix of 33 percent;
- Developing a California cap-and-trade program that links with other Western Climate Initiative partner programs to create a regional market system;
- Establishing targets for transportation-related greenhouse gas emissions for regions throughout California and pursuing policies and incentives to achieve those targets;
- Adopting and implementing measures pursuant to existing State laws and policies, Including California's clean car standards, goods movement measures, and the Low Carbon Fuel Standard; and
- Creating targeted fees, including a public goods charge on water use, fees on high global warming potential gases, and a fee to fund the administrative costs of the State's long- term commitment to AB 32 implementation.

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

COPY

In addition, the Scoping Plan differentiates between "capped" and "uncapped" strategies. "Capped" strategies are subject to the proposed cap-and-trade program. The Scoping Plan states that the inclusion of these emissions within the cap-and trade program will help ensure that the year 2020 emission targets are met despite some degree of uncertainty in the emission reduction estimates for any individual measure. Implementation of the capped strategies is calculated to achieve a sufficient amount of reductions by 2020 to achieve the emission target contained in AB 32. "Uncapped" strategies that will not be subject to the cap-and-trade emissions caps and requirements are provided as a margin of safety by accounting for additional greenhouse gas emission reductions.

The 2022 Scoping Plan was adopted by CARB in November 2022 and expands upon earlier plans with a target of reducing GHG emissions to 85 percent below 1990 levels by 2045.

Senate Bill 100. Senate Bill 100 (SB 100) requires 100 percent of total retail sales of electricity in California to come from eligible renewable energy resources and zero-carbon resources by December 31, 2045. SB 100 was adopted September 2018.

The interim thresholds from prior Senate Bills and Executive Orders would also remain in effect. These include Senate Bill 1078 (SB 1078), which requires retail sellers of electricity, including investor-owned utilities and community choice aggregators, to provide at least 20 percent of their supply from renewable sources by 2017. Senate Bill 107 (SB 107) which changed the target date to 2010. Executive Order S-14-08, which was signed on November 2008 and expanded the State's Renewable Energy Standard to 33 percent renewable energy by 2020. Executive Order S-21-09 directed the CARB to adopt regulations by July 31, 2010 to enforce S-14-08. Senate Bill X1-2 codifies the 33 percent renewable energy requirement by 2020.

SB 375. Senate Bill 375 (SB 375) was adopted September 2008 and aligns regional transportation planning efforts, regional GHG emission reduction targets, and land use and housing allocation. SB 375 requires Metropolitan Planning Organizations (MPO) to adopt a Sustainable Communities Strategy (SCS) or Alternate Planning Strategy (APS) that will prescribe land use allocation in that MPOs Regional Transportation Plan (RTP). CARB, in consultation with each MPO, will provide each affected region with reduction targets for GHGs emitted by passenger cars and light trucks in the region for the years 2020 and 2035. These reduction targets will be updated every eight years but can be updated every four years if advancements in emissions technologies affect the reduction strategies to achieve the targets. CARB is also charged with reviewing each MPO's Sustainable Communities Strategy or Alternate Planning Strategy for consistency with its assigned targets.

The Proposed Project is located within the Southern California Association of Governments (SCAG), which has authority to develop the SCS or APS. For the SCAG region, the targets set by CARB are at eight percent below 2005 per capita GHG emissions levels by 2020 and 13 percent below 2005 per capita GHG emissions levels by 2035. On April 4, 2024, SCAG adopted the 2024-2050 RTP/SCS, which meets the CARB emission reduction requirements.

City and County land use policies, including General Plans, are not required to be consistent with the RTP and associated SCS or APS. However, new provisions of CEQA would incentivize, through streamlining and other provisions, qualified projects that are consistent with an approved SCS or APS and categorized as "transit priority projects."

Assembly Bill 939 and Senate Bill 1374. Assembly Bill 939 (AB 939) requires that each jurisdiction in California to divert at least 50 percent of its waste away from landfills, whether through waste reduction, recycling or other means. Senate Bill 1374 (SB 1374) requires the California Integrated Waste Management Board to adopt a model ordinance by March 1, 2004 suitable for adoption by any local agency to require 50 to 75 percent diversion of construction and demolition of waste materials from landfills.

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

Executive Order S-13-08. Executive Order S-13-08 indicates that "climate change in California during the next century is expected to shift precipitation patterns, accelerate sea level rise and increase temperatures, thereby posing a serious threat to California's economy, to the health and welfare of its population and to its natural resources." Pursuant to the requirements in the order, the 2009 California Climate Adaptation Strategy (California Natural Resource Agency 2009) was adopted, which is the "... first statewide, multi-sector, region-specific, and information-based climate change in California, identifying and exploring strategies to adapt to climate change, and specifying a direction for future research.

Executive Order B-30-15. Executive Order B-30-15, establishing a new interim statewide greenhouse gas emission reduction target to reduce greenhouse gas emissions to 40 percent below 1990 levels by 2030, was signed by Governor Brown in April 2015.

Executive Order B-29-15. Executive Order B-29-15, mandates a statewide 25 percent reduction in potable water usage and was signed into law on April 1, 2015.

Executive Order B-37-16. Executive Order B-37-16, continuing the State's adopted water reduction, was signed into law on May 9, 2016. The water reduction builds off the mandatory 25 percent reduction called for in EO B-29-15.

Regional

The Project is within the South Coast Air Basin, which is under the jurisdiction of the SCAQMD. SCAQMD Regulation XXVII currently includes three rules:

- The purpose of Rule 2700 is to define terms and post global warming potentials.
- The purpose of Rule 2701, SoCal Climate Solutions Exchange, is to establish a voluntary program to encourage, quantify, and certify voluntary, high quality certified greenhouse gas emission reductions in the SCAQMD.
- Rule 2702, Greenhouse Gas Reduction Program, was adopted on February 6, 2009. The purpose of this rule is to create a Greenhouse Gas Reduction Program for greenhouse gas emission reductions in the SCAQMD. The SCAQMD will fund projects through contracts in response to requests for proposals or purchase reductions from other parties.

SCAQMD Threshold Development

The SCAQMD has established recommended significance thresholds for greenhouse gases for local lead agency consideration ("SCAQMD draft local agency threshold"). SCAQMD has published a five-tiered draft GHG threshold which includes a 10,000 metric ton of CO_2e per year for stationary/industrial sources and 3,000 metric tons of CO_2e per year significance threshold for residential/commercial projects. Tier 3 is anticipated to be the primary tier by which the SCAQMD will determine significance for projects. The Tier 3 screening level for stationary sources is based on an emission capture rate of 90 percent for all new or modified projects. A 90-precent emission capture rate means that 90 percent of total emissions from all new or modified stationary source projects would be subject to CEQA analysis. The 90-percent capture rate GHG significance screening level in Tier 3 for stationary sources was derived using the SCAQMD's annual Emissions Reporting Program.

The current draft thresholds consist of the following tiered approach:

- Tier 1 consists of evaluating whether or not the project qualifies for any applicable exemption under CEQA.

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

COPY

- Tier 2 consists of determining whether or not the project is consistent with a greenhouse gas reduction plan. If a project is consistent with a qualifying local greenhouse gas reduction plan, it does not have significant greenhouse gas emissions.
- Tier 3 consists of screening values, which the lead agency can choose but must be consistent. A project's construction emissions are averaged over 30 years and are added to a project's operational emissions. If a project's emissions are under one of the following screening thresholds, then the project is less than significant:
  - All land use types: 3,000 $MTCO_2e$ per year
  - Based on land use types: residential is 3,500 $MTCO_2e$ per year; commercial is 1,400 $MTCO_2e$ per year; mixed use is 3,000 $MTCO_2e$ per year; and industrial is 10,000 $MTCO_2e$ per year
- Tier 4 has the following options:
  - Option 1: Reduce emissions from business as usual by a certain percentage; this percentage is currently undefined
  - Option 2: Early implementation of applicable AB 32 Scoping Plan measures
  - Option 3: Year 2020 target for service populations (SP), which includes residents and employees: 4.8 $MTCO_2e$/SP/year for projects and 6.6 $MTCO_2e$/SP/year for plans;
  - Option 3, 2035 target: 3.0 $MTCO_2e$/SP/year for projects and 4.1 $MTCO_2e$/SP/year for plans
- Tier 5 involves mitigation offsets to achieve target significance threshold.

WRCOG Subregional Climate Action Plan

The City of San Jacinto is part of the Western Riverside Council of Government (WRCOG). The WRCOG adopted the WRCOG Subregional Climate Action Plan (CAP) in September 2014. Twelve cities in the subregion joined efforts to develop the Subregional CAP, which set forth a subregional emissions reduction target, emissions reduction measures, and action steps to assist each community to demonstrate consistency with California's Global Warming Solutions Act of 2006 (AB 32). The CAP consists of an emissions reduction target of 15 percent below 2010 levels by 2020, and 49 percent below 2010 levels by 2035. As indicated in the CAP the emission reduction target of 15 percent from 2010 levels equates to a GHG emissions reduction of nearly 2,330,647 metric tons below business-as-usual (BAU) conditions by 2020. In order to reach these goals, the CAP provides feasible strategies, while affording its communities other economic and environmental benefits.

Therefore, to determine whether the Project's GHG emissions are significant, this analysis uses the WRCOG CAP.

The Project will be subject to the latest requirements of the California Green Building and Title 24 Energy Efficiency Standards (currently 2022) which would reduce project-related greenhouse gas emissions.

Significance Criteria

To determine if a project would have a significant impact on greenhouse gases, the type, level, and impact of emissions generated by the project must be evaluated. The following greenhouse gas significance thresholds are contained in Appendix G of the CEQA Guidelines, and a significant impact would occur if the project would:

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment; or

b) Conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases.

COPY

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

However, despite this, currently neither the CEQA statutes, the OPR guidelines, nor the draft proposed changes to the CEQA Guidelines prescribe thresholds of significance or a particular methodology for performing an impact analysis; as with most environmental topics, significance criteria are left to the judgment and discretion of the Lead Agency. The SCAQMD has adopted draft interim thresholds. The Project was compared to the Tier 4 per service population threshold, interpolated for opening year 2027 at 3.96 $MTCO_2e$ per year per service population. The Project was also compared to the goals of the WRCOG CAP for this analysis.

4.8.3 Impact Analysis

CEQA Thresholds	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact or Does Not Apply
GREENHOUSE GAS EMISSIONS: Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?			X	
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?			X	

Discussion

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Construction GHG Impact

Less Than Significant Impact. The greenhouse gas emissions from Project construction equipment and worker vehicles are shown in **Table 21: *Construction Greenhouse Gas Emissions***. The emissions are from all phases of construction. The total construction emissions amortized over a period of 30 years are estimated at 97.95 metric tons of CO_2e per year. Annual CalEEMod output calculations are provided in **Appendix A-1**.

Table 21: Construction Greenhouse Gas Emissions

Activity	Emissions ($MTCO_2e$)[1]		
	Onsite	Offsite	Total
Demolition	46.80	13.52	60.32
Site Preparation	96.40	4.23	100.63
Grading	330.00	1,050.30	1,380.30
Building Construction	545.00	765.30	1,310.30
Paving	51.60	22.32	73.92
Coating	3.39	9.74	13.13
Total	1,073.19	1,865.41	2,938.60
Averaged over 30 years[2]	35.77	62.18	97.95

Notes:
1. $MTCO_2e$=metric tons of carbon dioxide equivalents (includes carbon dioxide, methane and nitrous oxide).
2. The emissions are averaged over 30 years because the average is added to the operational emissions, pursuant to SCAQMD.

* CalEEMod output (Appendix A)

COPY

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

Operational GHG Impact

Operational emissions occur over the life of the Proposed Project. The operational emissions for the Project are 5,354 metric tons of CO2e per year or 3.957 metric tons of CO2e per service population as shown in **Table 22: *Opening Year Unmitigated Project-Related Greenhouse Gas Emissions***. The Project would be below the 2027 interpolated SCAQMD threshold of 3.96 metric tons of CO2e per service population, and therefore the Project would have a less than significant impact.

Table 22: Opening Year Unmitigated Project-Related Greenhouse Gas Emissions

Category	Greenhouse Gas Emissions (Metric Tons/Year)[1]						
	Bio-CO2	Non Bio-CO_2	CO_2	CH_4	N_2O	R	CO_2e
Area Sources[2]	0.00	7.21	7.21	0.00	0.00	0.00	7.23
Energy Usage[3]	0.00	0.00	0.00	0.00	0.00	0.00	0.00
Mobile Sources[4]	0.00	4,873.00	4,873.00	0.21	0.23	6.35	4,954.00
Solid Waste[5]	34.20	0.00	34.20	3.42	0.00	0.00	120.00
Water[6]	5.41	150.00	155.41	0.56	0.01	0.00	174.00
Refrigeration	0.00	0.00	0.00	0.00	0.00	0.97	0.97
Construction[7]	0.00	95.24	95.24	0.00	0.01	0.07	97.95
Total Emissions	39.61	5,124.01	5,163.62	4.19	0.25	7.39	5,354.15
Service Population							1,353
Total Emissions per Service Population (MTCO2e/yr/SP)							3.957
2027 Interpolated SCAQMD Threshold (MTCO2e/yr/SP)							3.960
Exceeds Threshold?							No

Notes:
1 Source: CalEEMod Version 2022.1.1.22
2 Area sources consist of GHG emissions from consumer products, architectural coatings, and landscape equipment.
3 Energy usage consist of GHG emissions from electricity and natural gas usage.
4 Mobile sources consist of GHG emissions from vehicles.
5 Solid waste includes the CO_2 and CH_4 emissions created from the solid waste placed in landfills.
6 Water includes GHG emissions from electricity used for transport of water and processing of wastewater.
7 Construction GHG emissions based on a 30-year amortization rate.

b) *Would the project conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?*

Less Than Significant Impact. The proposed Project would have the potential to conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs. The City of San Jacinto is participating the WRCOG Subregional Climate Action Plan. The WRCOG Subregional CAP establishes a community-wide emissions reduction target of 15 percent below 2010, following guidance from CARB and the Governor's Office of Planning and Research. CARB and the California Attorney General have determined this approach to be consistent with the state-wide AB 32 goal of reducing emissions to 1990 levels.

As shown in **Table 23: *Applicable WRCPG Subregional CAP Local Reduction Measure Project Comparison***, below, the Project is consistent with applicable local reduction measures identified in the WRCOG Subregional CAP and would result in a less than significant impact.

COPY

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

Table 23: Applicable WRCPG Subregional CAP Local Reduction Measure Project Comparison

WRCOG Local Reduction Measure	Measure Description	Project Compliance with Measure
E-1: Energy Action Plan	Improve municipal and community wide energy efficiency and reduce energy consumption through the adoption of local Energy Action Plans (EAP).	Not directly applicable to the Proposed Project; however, the Proposed Project will be compliant with the current Title 24 standards, including solar PV installations.
E-3: Shade Trees	Strategically plant trees to reduce the urban heat island effect.	The Proposed Project is to include trees per City requirements for new developments.
T-2: Bicycle Parking	Provide additional options for bicycle parking.	The Proposed Project will follow City requirements for bicycle parking.
T-8: Density	Improve jobs-housing balance and reduce vehicle miles traveled by increasing household and employment densities.	The Proposed Project is residential and located within 0.5 miles of a multiple schools and commercial uses.
T-10: Design/Site Planning	Design neighborhoods and sites to reduce VMT.	The Proposed Project is residential and located within 0.5 miles of a multiple schools and commercial uses.
T-14: Voluntary Transportation Demand Management	Reduce demand for roadway travel through incentives for alternative modes of transportation and disincentives for driving	The Proposed Project is residential and located within 0.5 mile of a multiple schools and commercial uses.
SW-1: Yard Waste Collection	Provide green waste collection bins community-wide.	The Proposed Project will be required to comply with City programs, such as City's recycling and waste reduction program, which comply, with the 75 percent reduction required by 2020 per AB 341.
SW-2: Food Scrap and Paper Division	Divert food and paper waste from landfills by implementing collection system.	The Proposed Project will be required to comply with City programs, such as City's recycling and waste reduction program, which comply, with the 75 percent reduction required by 2020 per AB 341.

Source: Appendix A-1

CARB Scoping Plan Consistency

The ARB Board approved a Climate Change Scoping Plan in December 2008. The Scoping Plan outlines the State's strategy to achieve the 2020 greenhouse gas emissions limit. The Scoping Plan "proposes a comprehensive set of actions designed to reduce overall greenhouse gas emissions in California, improve our environment, reduce our dependence on oil, diversify our energy sources, save energy, create new jobs, and enhance public health" (CARB 2008). The measures in the Scoping Plan have been in place since 2012.

This Scoping Plan calls for an "ambitious but achievable" reduction in California's greenhouse gas emissions, cutting approximately 30 percent from business-as-usual emission levels projected for 2020, or about 10 percent from today's levels. On a per-capita basis, that means reducing annual emissions of 14 tons of carbon dioxide for every man, woman and child in California down to about 10 tons per person by 2020.

In May 2014, CARB released its First Update to the Climate Change Scoping Plan (CARB 2014). This Update identifies the next steps for California's leadership on climate change. While California

COPY

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

continues on its path to meet the near-term 2020 greenhouse gas limit, it must also set a clear path toward long-term, deep GHG emission reductions. This report highlights California's success to date in reducing its GHG emissions and lays the foundation for establishing a broad framework for continued emission reductions beyond 2020, on the path to 80 percent below 1990 levels by 2050.

In November 2017, CARB release the 2017 Scoping Plan. This Scoping Plan incorporates, coordinates, and leverages many existing and ongoing efforts and identifies new policies and actions to accomplish the State's climate goals, and includes a description of a suite of specific actions to meet the State's 2030 GHG limit. In addition, Chapter 4 provides a broader description of the many actions and proposals being explored across the sectors, including the natural resources sector, to achieve the State's mid and long-term climate goals.

Guided by legislative direction, the actions identified in the 2017 Scoping Plan reduce overall GHG emissions in California and deliver policy signals that will continue to drive investment and certainty in a low carbon economy. The 2017 Scoping Plan builds upon the successful framework established by the Initial Scoping Plan and First Update, while identifying new, technologically feasible, and cost-effective strategies to ensure that California meets its GHG reduction targets in a way that promotes and rewards innovation, continues to foster economic growth, and delivers improvements to the environment and public health, including in disadvantaged communities. The Plan includes policies to require direct GHG reductions at some of the State's largest stationary sources and mobile sources. These policies include the use of lower GHG fuels, efficiency regulations, and the Cap-and Trade Program, which constrains and reduces emissions at covered sources.

As the latest, 2022 Scoping Plan builds upon previous versions, project consistency with applicable strategies of both the 2008 and 2017 Plan are assessed in Table 24. As shown in **Table 24: *Project Consistency with CARB Scoping Plan Policies and Measures***, the Project is consistent with the applicable strategies and would result in a less than significant impact.

Therefore, the Project would not conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases. Furthermore, the Project will also comply with applicable Green Building Standards and City of San Jacinto's policies regarding sustainability (as dictated by the City's General Plan). With incorporation of regulatory compliance and credit for reductions due to CAPCOA location-based efficiency measures, impacts are considered to be less than significant, further analysis is not warranted.

Table 24: Project Consistency with CARB Scoping Plan Policies and Measures

2008 Scoping Plan Measures to Reduce Greenhouse Gas Emissions	Project Compliance with Measure
California Light-Duty Vehicle Greenhouse Gas Standards – Implement adopted standards and planned second phase of the program. Align zero-emission vehicle, alternative and renewable fuel and vehicle technology programs with long-term climate change goals.	**Consistent.** These are CARB enforced standards; vehicles that access the Project that are required to comply with the standards would comply with the strategy.
Energy Efficiency – Maximize energy efficiency building and appliance standards; pursue additional efficiency including new technologies, policy, and implementation mechanisms. Pursue comparable investment in energy efficiency from all retail providers of electricity in California.	**Consistent.** The Project would be compliant with the current Title 24 standards.

COPY

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

Low Carbon Fuel Standard – Develop and adopt the Low Carbon Fuel Standard.	**Consistent.** These are CARB enforced standards; vehicles that access the Project that are **required** to comply with the standards would comply with the strategy.
Vehicle Efficiency Measures – Implement light-duty vehicle efficiency measures.	**Consistent.** These are CARB enforced standards; vehicles that access the Project that are required to comply with the standards would comply with the strategy.
Medium/Heavy-Duty Vehicles – Adopt medium and heavy-duty vehicle efficiency measures.	**Consistent.** These are CARB enforced standards; vehicles that access the Project that are required to comply with the standards would comply with the strategy.
Green Building Strategy – Expand the use of green building practices to reduce the carbon footprint of California's new and existing inventory of buildings.	**Consistent.** The California Green Building Standards Code (proposed Part 11, Title 24) was adopted as part of the California Building Standards Code in the CCR. Part 11 establishes voluntary standards, that are mandatory in the 2022 edition of the Code, on planning and design for sustainable site development, energy efficiency (in excess of the California Energy Code requirements), water conservation, material conservation, and internal air contaminants. The Project would be subject to these mandatory standards.
High Global Warming Potential Gases – Adopt measures to reduce high global warming potential gases.	**Consistent.** CARB identified five measures that reduce HFC emissions from vehicular and commercial refrigeration systems; vehicles that access the Project that are required to comply with the measures will comply with the strategy.
Recycling and Waste – Reduce methane emissions at landfills. Increase waste diversion, composting, and commercial recycling. Move toward zero-waste.	**Consistent.** The state is currently developing a regulation to reduce methane emissions from municipal solid waste landfills. The Proposed Project will be required to comply with City programs, such as City's recycling and waste reduction program, which comply, with the 75 percent reduction required by 2020 per AB 341.
Water – Continue efficiency programs and use cleaner energy sources to move and treat water.	**Consistent.** The Project would comply with all applicable City ordinances and CAL Green requirements.
2017 Scoping Plan Recommended Actions to Reduce Greenhouse Gas Emissions	**Project Compliance with Recommended Action**
Implement Mobile Source Strategy: Further increase GHG stringency on all light-duty vehicles beyond existing Advanced Clean Car regulations.	**Consistent.** These are CARB enforced standards; vehicles that access the Project that are required to comply with the standards will comply with the strategy.
Implement Mobile Source Strategy: At least 1.5 million zero emission and plug-in hybrid light-duty electric vehicles by 2025 and at least 4.2 million zero emission and plug-in hybrid light- duty electric vehicles by 2030.	**Consistent.** These are CARB enforced standards; vehicles that access the Project that are required to comply with the standards will comply with the strategy.
Implement Mobile Source Strategy: Innovative Clean Transit: Transition to a suite of to-be-determined innovative clean transit options. Assumed 20 percent of new urban buses purchased beginning in 2018 will be zero emission buses with the penetration of zero- emission technology ramped up to 100 percent of new sales in 2030. Also, new natural gas buses, starting in 2018, and diesel buses, starting in 2020, meet the optional heavy-duty low-NOX standard.	**Consistent.** These are CARB enforced standards; vehicles that access the Project that are required to comply with the standards will comply with the strategy.

COPY

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

Implement Mobile Source Strategy: Last Mile Delivery: New regulation that would result in the use of low NOX or cleaner engines and the deployment of increasing numbers of zero-emission trucks primarily for class 3-7 last mile delivery trucks in California. This measure assumes ZEVs comprise 2.5 percent of new Class 3-7 truck sales in local fleets starting in 2020, increasing to 10 percent in 2025 and remaining flat through 2030.	**Consistent.** These are CARB enforced standards; vehicles that access the Project that are required to comply with the standards will comply with the strategy.
Implement SB 350 by 2030: Establish annual targets for statewide energy efficiency savings and demand reduction that will achieve a cumulative doubling of statewide energy efficiency savings in electricity and natural gas end uses by 2030.	**Consistent.** The Project will be compliant with the current Title 24 standards.
By 2019, develop regulations and programs to support organic waste landfill reduction goals in the SLCP and SB 1383.	**Consistent.** The Project will be required to comply with City programs, such as City's recycling and waste reduction program, which comply, with the 75 percent reduction required by 2020 per AB 341.

Source: Appendix A-1

The Project would not generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment and would be consistent with the GHG reduction policies adopted in the WRCOG CAP and consequently would not conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs. The impact would be less than significant, and no mitigation is required.

4.8.4 Mitigation Measures

No mitigation measures associated with impacts to Greenhouse Gas apply to the Proposed Project.

4.8.5 Conclusion

Potential impacts of the Proposed Project associated with Greenhouse Gas Emissions would be less than significant, and no mitigation would be required.

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

COPY

4.9 Hazards and Hazardous Materials

Information and analysis in this section is derived from the documents incorporated by reference as identified in Section 1.3 of this document and from the Project-specific Phase I Environmental Site Assessment (Phase I ESA) prepared by Partner Engineering and Science Inc., dated September 30, 2024 and included as **Appendix E**.

4.9.1 Impact Analysis

CEQA Thresholds	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact or Does Not Apply
HAZARDS AND HAZARDOUS MATERIALS: Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?			X	
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?		X		
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?			X	
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard or excessive noise to the public or the environment?				X
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?				X
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?			X	
g) Expose people or structures, either directly or indirectly to a significant risk of loss, injury or death involving wildland fires?				X

Discussion

a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Less than Significant Impact. Demolition and construction activities for the proposed Project would involve the use of chemical substances such as solvents, paints, fuel for equipment, and other potentially hazardous materials. Hazards to the environment or the public would typically occur with the transport, use, storage, or disposal of hazardous materials. Demolition and construction activities would be relatively short-term and the transport, use, and disposal of hazardous materials as part of

COPY

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

these activities would utilize small quantities and be temporary. The contractor would be required to comply with existing regulations for the transport, use, storage, and disposal of hazardous materials to prevent public safety hazards. These regulations include the Hazardous Materials Transportation Act, Resource Conservation and Recovery Act, California Hazardous Waste Control Act, and California Accidental Release Prevention Program, among others.

Long-term Project operation is not expected to involve the routine transport, use, or disposal of hazardous materials in quantities or conditions that would pose a hazard to public health and safety or the environment. No industrial uses or facilities are proposed that might be associated with such routine use, transport, or disposal of such materials. Proposed residential operations would involve the use of cleaning products and occasional use of pesticides and herbicides for landscape maintenance. These materials are common for general maintenance and would not be stored in large quantities that pose a significant health hazard to the public or environment. Therefore, potential impacts would be less than significant.

b) *Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?*

Less than Significant With Mitigation Incorporated. As discussed in the Phase I ESA, review of historic sources indicates the site has been used for agricultural purposes since the early 1930s. The Proposed Project Site was initially developed with an ostrich farm and residence which operated as such until the 1940s. The Proposed Project Site was occupied by a cattle ranch between the 1940s until 1976 when Chacon Farms purchased the Proposed Project Site. Operations at Chacon Farms included cattle farming; cultivation of onions, hay, banana squash, carrots, and potatoes; and onion processing and packaging. Formal operation of Chacon Farms concluded in circa 1995 and the agricultural portion of the Proposed Project Site has been leased to various tenant farmers since then and up to the present. Bruno Ranches is the current tenant farmer leasing the agricultural portion of the Proposed Project Site, which cultivates a "Roundup ready" strain of alfalfa not requiring application of pesticides **Appendix E**).

The objective of a Phase I ESA is to identify the presence of Recognized Environmental Conditions (RECs), defined by the American Society for Testing and Materials as: The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property 1) due to any release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions which pose a material threat of future release to the environment. As stated above, agricultural chemicals such as pesticides and fertilizers have likely been applied to crops grown on the Proposed Project Site. However, the Phase I ESA does not consider the legal application of agricultural chemicals as an REC, since agricultural chemicals in use today are typically regulated by State or local agencies and experience with surface soil sampling and analysis from properties with similar agricultural histories has typically revealed non-detectable or very low concentrations of environmentally persistent agricultural chemicals. In addition, the Phase I ESA notes that no specific areas of concern (e.g. product mishandling, releases, spills, incidents, etc.) related to agricultural chemical storage and use at the Proposed Project Site were identified. Based on the continued use of the Proposed Project Site for agricultural purposes and the absence of specific areas of concern associated with agricultural chemical storage and use, the current and historical agricultural use of the Proposed Project Site is not expected to represent a significant environmental concern (**Appendix E**).

During site reconnaissance, hydraulic oil, propane, and gasoline tanks were found on-site. However, the materials were found to be properly labeled and stored with no signs of leaks, stains, or spills. Based on the nature of use and overall small quantities and lack of violations on-file with the local health department, these materials are not expected to represent a significant environmental concern. Three 250-gallon diesel aboveground storage tanks (ASTs) were also observed stored atop a truck bed

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

COPY

parked east of the barns. The ASTs were not in use and do not appear to have been used in the last decade or more. No evidence of leakage, surface staining, or petroleum hydrocarbon odors was identified in the area of the ASTs. Based on the absence of evidence of a release, the presence of the ASTs on the Proposed Project Site is not expected to represent a significant environmental concern at this time.

Due to the age of the residential building on-site, which was constructed in 1946, there is potential for Asbestos-Containing Materials (ACMs) and Lead Based Paint to be present. Interior and exterior painted surfaces were observed in good condition and therefore not expected to represent a hazard. As such, the Project would implement **Mitigation Measure HAZ-1**, which would require a comprehensive survey prior to the disturbance of any suspect ACMs to determine if the subject materials are regulated. If such materials are identified and need to be disturbed, repaired, or removed, a licensed abatement contractor should be consulted further.

Additionally, due to the historical presence of cattle farming on-site, the Project would be required to conduct methane testing prior to the issuance of building permits to reduce concentration of methane to an acceptable level if found on-site. Therefore, with implementation of **Mitigation Measure HAZ-2**, the Project would result in less than significant impacts related to methane.

Overall, the Phase I ESA did not identify evidence of RECs, Controlled Recognized Environmental Conditions (CRECs) or Historical Recognized Environmental Conditions (HRECs) at the Proposed Project Site. With implementation of Mitigation Measure HAZ-1 and Mitigation Measure HAZ-2, Project impacts related to creation of a significant hazard to the public involving release of hazards into the environment would be less than significant.

c) *Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?*

Less Than Significant Impact. The nearest school to the Proposed Project Site is Tahquitz High School, located approximately 0.27 mile south of the most southern Project boundary. As stated above, hazardous materials used during temporary construction activities and residential occupation would be common in type and of low-concentration properties. Therefore, the potential impacts associated with the transport and use of hazardous materials during construction and operations would be less than significant, and no mitigation is required.

D) *Would the project be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?*

No Impact. Government Code Section §65962.5(a)(1) requires that Department of Toxic Substance Control (DTSC) "shall compile and update as appropriate, but at least annually, and shall submit to the Secretary for Environmental Protection, a list of all the following: (1) all hazardous waste facilities subject to corrective action pursuant to Section 25187.5 of the Health and Safety Code ("HSC")." The hazardous waste facilities identified in HSC Section 25187.5 are those where DTSC has taken or contracted for corrective action because a facility owner/operator has failed to comply with a date for taking corrective action in an order issued under HSC Section 25187, or because DTSC determined that immediate corrective action was necessary to abate an imminent or substantial endangerment. This is known as the "Cortese List." This is a very small and specific subgroup of facilities and they are not separately posted on the DTSC or Cal/EPA's website. The following databases that meet the "Cortese List" requirements were reviewed for this Project.

Envirostore Database. There are no sites listed in the Envirostore Database within 1,000 feet of the Proposed Project Site.

Attachment: Mitigated Negative Declaration (Chacon Farms (PROJ23-0029))

COPY

FINDINGS OF FACTS
Chacon Farms Residential Development

GENERAL PLAN AMENDMENT FINDINGS:

1. **The amendment is internally consistent with all other provisions of the General Plan and any applicable specific plan;**

   The proposed General Plan Amendment from VLDR (Very Low Density Residential) to LDR (Low Density Residential) will further the intent of the General Plan by providing a variety of new housing opportunities that will complement surrounding uses of primarily residential developments. Specifically the General Plan Amendment will continue to allow the development of residences on the project site with a density range of 2.1 to 7 dwelling units to the acre in lieu of the current density range of 0-2 dwelling units to the acre with the VLDR designation. With proposed General Plan Amendment, the proposed project will conform with the goals and policies of the General Plan, including the applicable goals and policies of the Land Use Element and Housing Element, as detailed below:

   Land Use Goal 1: A community with a land use plan that accommodates a mix of uses to meet current and future needs.
   Specifically implementing policy 1.3 & 1.6

   - The Project supports Policy LU-1.3 by increasing the City's housing supply within an established growth area and contributing toward the City's Regional Housing Needs Allocation (RHNA). The Project includes 419 single-family residential units within the allowable density range of the Low Density Residential designation, helping to meet current and future housing needs.

   - The Project is consistent with Policy LU-1.6 through the incorporation of multiple neighborhood parks, open space areas, and an interconnected system of pedestrian paseos. These features provide accessible recreational opportunities and functional gathering spaces for future residents.

   Land Use Goal 2: A City that manages and directs growth so that the community and its neighborhoods are protected and enhanced.
   Specifically implementing policy 2.1 & 2.2

   - The Project supports Policies LU-2.1 and LU-2.2 by promoting an orderly and coordinated pattern of development that is compatible with surrounding residential uses. The Project site is adjacent to existing and

planned residential neighborhoods and proposes a density that is consistent with the Low Density Residential designation.

- The Project includes an interconnected circulation network designed to improve internal connectivity, provide efficient vehicular and pedestrian access, and enhance access to on-site open space and neighborhood amenities. The Project also provides connectivity to the Class I multi-use path along Esplanade Avenue, supporting multimodal access.

- The Project provides a balanced distribution of open space and recreational amenities throughout the site, ensuring that residents have convenient access to neighborhood parks and contributing to the overall quality and livability of the community.

The Project has been reviewed for consistency with applicable infrastructure and service requirements and will coordinate with appropriate service providers, including Eastern Municipal Water District, to ensure adequate utilities and public services are provided.

Based on the foregoing, the proposed General Plan Amendment is internally consistent with the goals, policies, and land use framework of the General Plan and will not create inconsistencies with other provisions of the Plan.

2. The proposed amendment will not be detrimental to the public interest, health, safety, convenience, or welfare of the City;

Public Interest

The proposed project is consistent with the General Plan and serves the public interest by providing a balanced mix of housing and amenities that meet community needs and enhance recreational and social opportunities. The project would contribute 419 residential units toward the Regional Housing Needs Allocation (RHNA), offering a variety of housing types to accommodate diverse ages, incomes, and household needs. The homes are designed with architectural styles that complement the area's rural character. Overall, the development promotes livability through walkability, community engagement, integrated open space, pedestrian safety, and support for an active lifestyle.

Health and Safety

The proposed project is consistent with the General Plan and promotes public health and safety by incorporating a planned layout that emphasizes pedestrian safety and encourages physical activity and well-being. Four community parks, connected by an integrated network of pathways, will provide residents with a range of social and recreational opportunities.

Convenience

The proposed project conforms with the provision of public convenience according to the General Plan. This development will create an additional 419 homes that are within a convenient distance to surrounding amenities and public infrastructure, including the following:

- *Transit*
  The Project Site is approximately 0.6 miles (a 12-minute walk), from the Riverside Transit Agency (RTA) Go Micro service zone. Go Micro is RTA's on-demand public transit service available within the Hemet-San Jacinto micro transit zone. Shared rides can be booked via the Go Micro app at user convenience, rather than relying on a predetermined bus schedule. Go Micro minibuses directly pick up and drop off passengers at desired locations, at desired times (provided both locations are within the micro transit zone and that the trip does not begin and end at route 44 bus stops).

- *Schools*
  The Project Site is located within the Hemet Unified School District and would likely be served by nearby schools, including Cawston Elementary School (1.3 miles), Rancho Viejo Middle School (0.9 miles), and Tahquitz High School (0.7 miles). The site may also be served by Megan Cope Elementary School (0.7 miles), which is within the San Jacinto Unified School District. In addition, Mt. San Jacinto College is approximately five miles from the Project Site and is directly accessible via RTA's on-demand transit service, Go Micro.

Welfare

The proposed project with the support of the General Plan Amendment and Zoning Map Amendment, will support and promote the general welfare of San Jacinto residents. The proposed project, specifically, will support and promote walkability, community engagement, integrated open space, pedestrian safety, and an active lifestyle. Integrated Community Parks connected by a network of paths will facilitate recreation and socialization.

3. **If an amendment to the Land Use Element, the affected site(s) is physically suitable in terms of design, location, shape, size, operating characteristics, and the provision of public and emergency vehicle (e.g., fire and medical) access and public services and utilities (e.g., fire protection, police protection, potable water, schools, solid waste collection and disposal, storm drainage, wastewater collection, treatment, and disposal, etc.), to ensure that the proposed or anticipated uses and/or development will not endanger, jeopardize, or otherwise constitute a hazard to the property or improvements in the vicinity in which the property is located; and**

Physical Suitability

The proposed project, with the support of the General Plan Amendment and Zoning Map Amendment, will not endanger, jeopardize, or otherwise constitute hazard to property in the vicinity in which the property is located and will be physically suitable in terms of design, location, shape, size, operating characteristics, and the provision of public emergency vehicle access and public services as follows:

- *Design*

  The Proposed Project is designed to be compatible with the surrounding San Jacinto community and consistent with adjacent residential uses. The development features an interconnected grid of streets that enhances walkability and provides convenient vehicle and pedestrian access to homes, community parks, and recreational amenities distributed throughout the site.

  Residential architecture will include farmhouse, Spanish, and prairie styles, using quality materials such as stucco, brick, and stone, along with a varied but cohesive color palette that complements the broader community and individual streetscapes. These design elements enhance the visual character of the Chacon Farms community.

  The project will not interfere with existing water or sewer easements, as confirmed by the site boundary survey, and will comply with applicable landscaping and setback requirements. The site's north–south orientation supports efficient solar design, with some east–west–oriented homes incorporated where feasible to allow for additional passive solar opportunities.

- *Location*

  The proposed development will complement and enhance surrounding land uses. Existing single-family residential neighborhoods are located to the north, northeast, and northwest across West 7th Street, as well as to the east across Cawston Avenue. To the west, the Esplanade Specific Plan includes approximately 130.7 acres of planned single-family residential development.

- *Shape and Size*

  The project site is generally rectangular in configuration and consists of three smaller rectangular parcels. The proposed project is designed to minimize sprawl and efficiently utilize the approximately 75.70 acres of site area. The site will accommodate 419 single-family homes with a minimum lot size of 3,717 square feet, along with designated open space for parks and a basin.

- *Operating Characteristics*
  The proposed projects operating characteristics will be consistent with those of surrounding single-family developments. The proposed project will operate as a place of housing, enhanced by various amenities within several community parks, to prospective residents.

- *Public Emergency Vehicle Access*
  The proposed project's inter-connected network of thoroughfares will contribute to emergency vehicle accessibility. The applicant will comply with any easement requirements for public emergency vehicle access. Further, the proposed public emergency vehicle access will be reviewed by City and County Departments including the City's engineering department and Riverside County Fire, to ensure efficiency and safety for future residents.

- *Public Service and Utilities*
  Adequate City infrastructure exists to support the Project. Additionally, the project has been reviewed by Police, Fire, Public Utilities and Engineering to ensure that the design accommodates public and emergency vehicles including solid waste haulers, City crews, and other service providers.

4. **The City may reduce, require, or permit the reduction of, the residential density for any parcel to, or allow development of any parcel at, a lower residential density, as defined in Government Code Section 65863, only if the following two additional findings are first made:**

   a. **The reduction is consistent with the adopted General Plan, including the Housing Element; and**

      The proposed Project does not involve a reduction in residential density. The proposed General Plan Amendment would change the land use designation from Very Low Density Residential (0 to 2 dwelling units per acre) to Low Density Residential (2.1 to 7 dwelling units per acre), thereby allowing for an increase in residential density on the Project site. Accordingly, this finding is not applicable. Notwithstanding, the Project is consistent with the General Plan and Housing Element.

   b. **The remaining sites identified in the Housing Element are adequate to accommodate the jurisdiction's share of the regional housing needs in compliance with Government Code Section 65584.**

      The proposed Project does not reduce residential density and

therefore does not trigger this finding. Notwithstanding, the Housing Element identifies adequate sites to accommodate the City's remaining Regional Housing Needs Allocation (RHNA), and the Project would increase the City's housing supply and contribute toward meeting its RHNA obligations.

CHANGE OF ZONE FINDINGS:

1. **Findings required for all Development Code and Zoning Map amendments.**

   a. **The proposed amendment is consistent with the General Plan and any applicable specific plan;**

      The proposed Change of Zone from Rural Residential (RR) to Residential Low Density (RL) is consistent with the General Plan with the adoption of the proposed General Plan Amendment. The RL zoning designation is the implementing zone for the Low Density Residential (LDR) General Plan land use designation and will ensure consistency between the General Plan and Zoning Map. The Project site is not located within a Specific Plan area; therefore, no Specific Plan applies.

   b. **The proposed amendment will not be detrimental to the public interest, health, safety, convenience, or welfare of the City.**

      The proposed Change of Zone will not be detrimental to the public interest, health, safety, convenience, or welfare of the City. The amendment will facilitate the development of a planned residential community that is consistent with the General Plan and Development Code. The Project incorporates an interconnected circulation system, neighborhood parks, and pedestrian amenities that promote walkability and community interaction.

      The Project has been reviewed by applicable City departments and service providers to ensure that adequate infrastructure and public services, including police, fire, utilities, and emergency access, are available to serve the site. As conditioned, the Project will not result in adverse impacts to the surrounding area and will support orderly and coordinated development.

2. **Additional findings for Zoning Map amendments**

   a. **The affected site(s) is physically suitable in terms of design, location, shape, size, operating characteristics, and the provision of public and emergency vehicle (e.g., fire and medical) access and public services and utilities (e.g., fire protection, police protection, potable water, schools, solid waste collection and disposal, storm drainage, wastewater collection, treatment, and disposal, etc.), to ensure that the requested zoning designation and the proposed or anticipated uses and/or development will not endanger, jeopardize, or otherwise constitute a hazard to the property or improvements in the vicinity in which the property is located.**

      The Project site is physically suitable for the proposed Residential Low

Density (RL) zoning designation in terms of design, location, shape, size, and operating characteristics. The site is of sufficient size and configuration to accommodate the proposed residential development, including internal circulation, open space, and required infrastructure.

The Project is located adjacent to existing and planned residential development and represents a logical extension of the surrounding land use pattern. The proposed street network is designed to provide adequate access for residents, service providers, and emergency response vehicles and will be subject to review and approval by the City's Engineering Department and Riverside County Fire Department.

Adequate public services and utilities are available, or will be provided, to serve the Project, including potable water, wastewater, storm drainage, solid waste services, and schools. The Project has been reviewed by relevant agencies and departments to ensure that the proposed zoning and anticipated development will not endanger or otherwise constitute a hazard to surrounding properties or improvements.

SUBDIVISION FINDINGS (TTM 39076):

1. **The proposed subdivision of land has been found to be consistent with the Development Code, General Plan, and the San Jacinto Municipal Code.**

   The proposed Tentative Tract Map (TTM 39076) is consistent with the San Jacinto Municipal Code and has been reviewed in accordance with the applicable provisions of Titles 16 and 17. The Project includes a Planned Development Permit to allow limited, controlled modifications to the development standards of the Residential Low Density (RL) zone, which are intended to facilitate a cohesive and well-designed residential community.

   Upon approval of the General Plan Amendment and Change of Zone, the Project will be consistent with the Low Density Residential (LDR) General Plan land use designation and the corresponding RL zoning designation. The proposed subdivision is consistent with the permitted density range and establishes a logical and orderly pattern of residential development.

   The Project implements applicable General Plan goals and policies, including:

   - Land Use Goal 2 and Policies LU-2.1 and LU-2.2, by promoting orderly and coordinated growth that is compatible with surrounding residential neighborhoods and supported by an interconnected circulation network and accessible open space; and

   - Land Use Goal 3 and Policies LU-3.1 and LU-3.2, by facilitating high-quality residential development that is compatible with adjacent land uses and incorporates design features that enhance neighborhood character and connectivity.

   Based on the foregoing, the proposed subdivision is consistent with the Development Code, General Plan, and Municipal Code.

2. **The tentative map does not propose to divide land which is subject to a contract entered into pursuant to the California Land Conservation Act of 1965, or the land is subject to a Land Conservation Act contract but the resulting parcels following division of the land will be of an adequate size to sustain their agricultural use**

   The project site is not subject to a contract pursuant to the California Land Conservation Act of 1965 as detailed in the analysis completed through the Mitigated Negative Declaration document. In addition, the projects title report did not have indication of a Williamson Act Contract.

3. **The site is physically suitable for the type and proposed density of development proposed by the tentative map.**

   The Project site is physically suitable for the proposed subdivision of 419 single-family residential lots. The proposed use is consistent with the Residential Low Density (RL) zoning designation and the Low Density Residential (LDR) General Plan land use designation, which permits residential development within the proposed density range.

   The site is of sufficient size and configuration to accommodate the proposed subdivision, including residential lots, internal circulation, and open space areas. The Project represents a logical expansion of existing and planned residential development in the surrounding area, including neighborhoods to the north, east, and west.

   The Project site has access to existing and planned infrastructure necessary to support the proposed development, including potable water, wastewater, natural gas, and electrical services, which are available within adjacent roadways. The site is also located in proximity to existing community amenities, including parks and schools, which support the residential character of the Project.

   Based on the foregoing, the site is physically suitable for the type and density of development proposed.

4. **The design of the subdivision and the proposed improvements, with conditions of approval, are either:**

   a. **Not likely to cause significant environmental damage or substantially and avoidably injure fish or wildlife or their habitat; or**

      An Initial Study was prepared for the Project in accordance with the California Environmental Quality Act (CEQA) to evaluate potential environmental impacts. The Initial Study determined that, with the incorporation of mitigation measures, the Project will not have a significant effect on the environment, including impacts to biological resources such as fish and wildlife and their habitat.

      All mitigation measures identified in the Initial Study have been incorporated into the Project and will be implemented through the Mitigation Monitoring and Reporting Program. Accordingly, the design of the subdivision and proposed improvements is not likely to cause significant environmental damage or substantially and avoidably injure fish or wildlife or their habitat.

b. An environmental impact report under which a finding has been made pursuant to Public Resources Code Section 21081(a)(3) that specific economic, social, or other considerations make infeasible mitigation measures or project alternatives identified in the environmental impact report.

The project's impacts were not significant enough to require the preparation of an environmental impact report. A Mitigated Negative Declaration was prepared for the Project to assess any significant environmental impacts, and it was determined that a Mitigated Negative Declaration is the appropriate level of environmental document. Therefore, findings pursuant to Public Resources Code Section 21081(a)(3) are not necessary.

5. The design of the subdivision of land and the type of improvements are not likely to cause serious public health problems.

The implementation of the proposed conditions will ensure that the Project will not be detrimental to the public interest, health, safety, convenience, or welfare of the City or the future residents of the development. As previously mentioned, a Mitigated Negative Declaration was prepared for the proposed subdivision, which analyzed items that can cause public health problems such as Air Quality, Hazardous Materials, and Utilities. It was determined through the environmental document that with incorporation of mitigation measures, the impacts to public health problems would be less than significant

6. That design of the subdivision provides for future passive or natural heating or cooling opportunities in the subdivision to the extent feasible.

The design of the subdivision will provide for future passive cooling opportunities with the implementation of building setbacks, lot coverage requirements, landscaping requirements, including required street trees, and open space areas. This can also include configuration to permit orientation of a structure to take advantage of shade and prevailing breezes. Furthermore, natural heating opportunities can be provided with orientation of a structure in an east-west alignment for southern exposure.

The proposed project is a subdivision and Planned Development Permit, subsequent development will be analyzed and conditioned through a Site Plan and Design Review. As part of the Site Plan and Design Review process, the Planning Department will ensure that natural heating and cooling opportunities are explored to the extent feasible and condition the project accordingly.

7. **The design of the subdivision and the type of improvements will not conflict with easements acquired by the public at large for access through or use of property within the proposed subdivision, or the design of the alternate easements which are substantially equivalent to those previously acquired by the public will be provided.**

   Per the title report provided by the project applicant, the site consists of two easements for a right-of-way over a strip of land 30 feet wide located outside the property line on Cawston Avenue. The second easement is granted to Easter Municipal Water District for sewage transmission and collection facilities. This easement is located outside the property lines along Cawston Avenue. These two easements are shown in the Tentative Tract Map and will not conflict with the development of the proposed Project.

8. **The subdivision is consistent with the City's parkland dedication requirements (per the Quimby Act), as applicable, in accordance with Chapter 16.75 (Parkland Dedication and Fees).**

   The proposed subdivision is consistent with the City's parkland dedication requirements pursuant to Chapter 16.75 of the San Jacinto Municipal Code. The Project provides approximately 3.26 acres of usable parkland within designated park lots, which contributes toward satisfying the City's parkland dedication requirement.

   Any remaining parkland obligation will be satisfied through the payment of in-lieu fees, in accordance with Chapter 16.75, as required by the Conditions of Approval.

   Based on the foregoing, the Project complies with the City's parkland dedication requirements..

PLANNED DEVELOPMENT PERMIT FINDINGS:

1. **The Planned Development Permit will:**

    a. **Be allowed within the subject base zone;**

    The Project includes a Change of Zone to the Residential Low Density (RL) zone. The RL zone is intended to accommodate detached single-family residential development, along with accessory uses and other compatible uses, at a density range of 2.1 to 7.0 dwelling units per acre.

    The Planned Development Permit is an allowed entitlement within the RL zone and is intended to provide flexibility from standard development requirements in order to achieve superior site design and community planning. Accordingly, the Planned Development Permit is permitted within the proposed base zone..

    b. **Be consistent with the purpose, intent, goals, policies, actions, and land use designations of the General Plan and any applicable specific plan;**

    The Project site is proposed to be designated Low Density Residential (LDR) under the General Plan, which permits detached single-family residential development at a density of 2.1 to 7.0 dwelling units per acre. The Project proposes a density of 5.53 dwelling units per acre, which is within the allowable range and consistent with the intended use of the LDR designation. The Project site is not located within a Specific Plan area.

    The Project is consistent with the purpose and intent of the General Plan by facilitating a well-planned residential community that balances efficient land use with neighborhood compatibility and access to amenities. The Planned Development Permit allows for modifications to development standards that support a cohesive site design while maintaining consistency with the overall density and character envisioned by the General Plan.

    The Project implements applicable General Plan goals and policies, including:

    - Land Use Policy LU-1.6, by incorporating an integrated system of open space and recreational amenities, including multiple parks, paseos, and gathering areas that support community interaction and outdoor activity;

    - Land Use Policy LU-4.4, by promoting pedestrian-oriented design through internal walkways, paseo connections, and

access to the Class I multi-use trail along Esplanade Avenue; and

- Land Use Policy LU-5.4, by providing well-designed, multi-functional open spaces, including neighborhood parks and a basin park, that serve a variety of recreational and community needs.

Based on the foregoing, the Planned Development Permit is consistent with the purpose, intent, goals, policies, and land use designations of the General Plan.

c. **Be generally in compliance with all of the applicable provisions of this Development Code relating to both on-site and off-site improvements that are necessary to accommodate flexibility in site planning and property development and to carry out the purpose, intent, and requirements of this Chapter and the subject base zone, including prescribed development standards and applicable design guidelines, except for those provisions modified in compliance with this Chapter.**

The Project is compliant with the Provisions of the Development Code relating to on-site and off-site improvements. The Project's off-site improvements will include a Class 1 Multi-Use along Esplanade Avenue as required per the Trails Master Plan. Additionally, the Project will be conditioned to dedicate and provide improvement along Esplanade Avenue, Cawston Avenue, and Seventh Street. On-site improvements will include 3.26-acres of open space amenities and connections to the proposed Class I Multi-Use Trail. The proposed modified development standards for the Project will accommodate flexibility in site planning and property development, while still upholding the intentions and goals of the Development Code by creating a cohesive neighborhood community. Therefore, the Project is found to be compliant with all the applicable provisions of the development code relating to both on-site and off-site improvements.

d. Ensure compatibility of property uses within the zone and general neighborhood of the proposed development.

The Project will include single-family residential uses and complementary recreational and open space areas. The combination of uses is generally considered compatible and will create a cohesive residential neighborhood. The development of the Class I Multi-Use Trail will continue the intent of creating an integrated trails network throughout the City and will serve as an amenity for residents nearby and within the development. The Project site is bound by residential uses.

The surrounding land uses designations include: Specific Plan to the west, Low Density Residential to the north, Very Low Density Residential to the east, and City of Hemet to the south. Development surrounding the Project Site is planned to be of similar character, land use, and density. Therefore, the proposed Project is found to be compatible the zone and with the general neighborhood of the proposed development.

2. **The proposed project will produce a comprehensive development of superior quality and excellence of design (e.g., appropriate variety of structure placement and orientation opportunities, appropriate mix of structure sizes, high quality architectural design, significantly increased amounts of landscaping and improved open space, improved solutions to the design and placement of parking and loading facilities, incorporation of a program of highly enhanced amenities [e.g., additional public art], LEED or other "green" related standards, etc.) than might otherwise occur from more typical development applications;**

   The proposed Project includes 3.26-acres of common areas and recreational amenities. This includes play areas, turf / open space area, and picnic areas. The Project additionally proposes to construct a Class I Multi-Use Trail along Esplanade Avenue. This trail will include a meandering six (6) foot sidewalk, landscaped parkway located on both sides of the walkway, and proposed channel. This trail will connect to the internal pedestrian paths.

   The architectural styles proposed will reflect styles farm style inspired. The Project, with its architectural styles, supporting landscape palette, open spaces, and monumentation, offers a development with excellence of design. The architectural styles include Spanish, Prairie, and Farmhouse for the future 419 dwelling units, accompanied by nine (9) color schemes. The incorporation of multiple styles and color options is intended to enhance visual interest while maintaining a unified aesthetic throughout the subdivision. In addition, the PDP proposes five (5) distinct floor plans, each offering three (3) elevation types. The design of the residential lots and variation in architecture creates a diverse community and avoids a monotonous appearance.

3. **Proper standards and conditions have been imposed to ensure the protection of the public health, safety, and welfare;**

   The Project Site is currently and has historically been used for agricultural purposes. Due to this fact, the environmental analysis of the Project Site included a Phase I Environmental Safety Assessment (Phase I ESA) to analyze any hazards that could result from development of the site. The Phase I ESA found that due to the historical use of this property for agricultural purposes dating back from at least 1930's, it is possible agricultural chemicals

such as pesticides and fertilizers have likely been applied to crops grown on the Proposed Project Site. Through the adoption of the Mitigation and Monitoring Program within the Conditions of Approval for the Project, any hazards that could create a significant hazard to the public or the environment through the conversion of agricultural land to residential uses will be significantly reduced to create a safe, healthy environment. Additionally, plans for the proposed residential development will be required to be submitted and approved through Site Plan and Design Review process.

Additionally, the Zoning, Fire, and Building Codes will ensure that that the development of the project will meet applicable safety standards. Therefore, it is found that with the incorporation of the above mentioned Mitigation Measures, Conditions of Approval, and the requirements of the Zoning, Fire, and Building Codes will ensure the protection of the public health, safety and welfare.

4. **Proper on-site traffic circulation (e.g., pedestrian and vehicular) and control is designed into the development to ensure protection for fire suppression and police surveillance equal to or better than what would normally be created by compliance with the minimum setback and parcel width standards identified in Article 2 (Zones, Allowable Land Uses, and Zone Specific Standards);**

   The proposed Planned Development Permit incorporates a comprehensive internal circulation system designed to accommodate both vehicular and pedestrian traffic while ensuring adequate access for emergency response and public safety services. The Project has been reviewed for compliance with applicable City standards and the requirements of the City Engineer, Riverside County Fire Department, and Sheriff's Department.

   The internal street network is designed to provide efficient circulation and connectivity throughout the Project site. Roadway widths, including minimum 24-foot fire access lanes where applicable, and turning radii have been designed to accommodate emergency vehicles, service vehicles, and passenger traffic. The interconnected street system enhances accessibility for fire suppression and law enforcement response.

   Pedestrian circulation is supported through sidewalks, paseos, and connections to on-site parks and adjacent improvements, including the Class I multi-use trail along Esplanade Avenue. These features promote safe and convenient pedestrian movement throughout the community.

   Based on the foregoing, the Project provides proper on-site traffic circulation and control for both vehicular and pedestrian movement and ensures protection for fire suppression and police services equal to or better than that which would be achieved through strict compliance with standard

development requirements..

5. **The subject parcel is adequate in terms of size, shape, topography, and circumstances to accommodate the proposed development;**

   The proposed Project Site is generally flat and is shaped to accommodate a proper lot layout. Section 17.620.020 of the Development Code states that the minimum lot size for a Planned Development Permit is 2 acres. The proposed Project site greatly exceeds this requirement and is 73.06-net acres. The proposed Project will provide an efficient use of land that will meet the purpose and intent of the Low Density Residential (LDR) General Plan land use designation by modifying the development standards to accommodate a 2-7 dwelling unit per acre development as required by the 2024 General Plan. Therefore, the subject parcel is adequate in terms of size, shape, topography, and circumstances to accommodate the proposed development.

6. **Adequate public services and facilities exist, or will be provided, in compliance with the conditions of approval, to serve the proposed development and the approval of the proposed development will not result in a reduction of public services to properties in the vicinity to be a detriment to public health, safety, and general welfare;**

   Adequate public services and facilities exist, or will be provided, to serve the proposed development. The Project has been reviewed by applicable City departments and service providers, including Public Works, Public Utilities, Sheriff's Department, and Riverside County Fire Department, to ensure that the development can be adequately served.

   Utility services, including potable water, wastewater, electricity, natural gas, telecommunications, and solid waste services, are available within the vicinity of the Project site or will be extended to serve the development. Eastern Municipal Water District has indicated its willingness and ability to provide water and wastewater service to the Project.

   The Project will be conditioned to ensure that all required infrastructure improvements are constructed and that service connections and applicable fees are provided prior to occupancy. Emergency access and response capabilities have been incorporated into the Project design and will be subject to review and approval by the appropriate agencies.

   Based on the foregoing, adequate public services and facilities exist, or will be provided, to serve the Project, and the proposed development will not result in a reduction of service levels to surrounding properties.

7. **The proposed development, as conditioned, will not have a substantial adverse effect on surrounding property or their allowed use;**

   The proposed development will not have a substantial adverse effect on surrounding properties or their allowed uses. The Project is consistent with the General Plan and zoning designations of the surrounding area and represents a logical extension of existing and planned residential development.

   The Project has been designed to be compatible with adjacent uses through site planning, building placement, and the incorporation of landscaping, open space, and internal circulation. The transition from the Project site to surrounding properties is appropriate for the area, whether adjacent lands remain in agricultural use or develop in accordance with the General Plan.

   The Project is subject to Conditions of Approval and compliance with applicable Municipal Code requirements, including noise, lighting, and traffic standards, as well as the California Building Code and Fire Code. These requirements are intended to prevent nuisances and ensure that the development does not create adverse impacts on surrounding properties.

   Based on the foregoing, the proposed development, as conditioned, will not have a substantial adverse effect on surrounding property or their allowed use.

8. **If the development proposes to mix residential and commercial uses whether done in a vertical or horizontal manner, the residential use is designed in a manner that it is appropriately buffered from the commercial use and is provided sufficiently enhanced amenities to create a comfortable and healthy residential environment and to provide a positive quality of life for the residents. The enhanced amenities may include additional landscaping, additional private open space, private or separated entrances, etc;**

   The Project does not propose a mix of residential and commercial uses as the project does not include Commercial uses.

9. **The design, location, operating characteristics, and size of the proposed development will be compatible with the existing and future land uses in the vicinity, in terms of aesthetic values, character, scale, and view protection; and**

   This project will have the appropriate buffers such as exterior walls and perimeter landscaping to ensure that it will be compatible with any future land use whether it remains agricultural, develops with Residential, Commercial or a project that integrates both, in accordance with the General Plan.

10. **The applicant agrees in writing to comply with any and all of the conditions imposed by the review authority in the approval of the Planned Development Permit.**

    The Applicant has agreed with all of the conditions imposed by the review authority prior to the issuance of any permits or recordation of any documents.

Re: Comment on Mitigated Negative Declaration, Chacon Farms Project (SCH 2025101241), May 5, 2026, City Council Agenda Item 4.1

Dear Honorable Mayor and Members of the City Council:

This comment is submitted on behalf of Supporters Alliance For Environmental Responsibility ("SAFER") regarding the Initial Study and Mitigated Negative Declaration ("IS/MND") prepared for the Chacon Farms Project (SCH 2025101241), which proposes the development of master-planned residential development consisting of 419 dwelling units as well as the construction of onsite roadways, a detention basin, parks, and on-site landscaping on 73.97-net acres, located at 710 Cawston Avenue North (APNs 432-260-009, 432-260-026, and 432-260-027) in the City of San Jacinto ("Project").

SAFER's review of the MND was assisted by air quality and greenhouse gas experts Matt Hagemann, P.G., C.Hg., and Paul E. Rosenfeld, Ph.D., of the Soil/Water/Air Protection Enterprise ("SWAPE"), indoor air quality expert Francis Offermann, CIH, agricultural resources experts Henry House and Gregory House of House Agricultural Consultants, and expert wildlife biologist Dr. Shawn Smallwood, Ph.D., whose written comments and CVs are attached as Exhibits A, B, C, and D respectively.

As discussed below, there is substantial evidence supporting a fair argument that the Project may have significant and unmitigated impacts on air quality, greenhouse gas emissions, indoor air quality, agricultural resources, and biological resources. SAFER respectfully requests that the City prepare an environmental impact report ("EIR") in order to comply with the California Environmental Quality Act ("CEQA") prior to approval of the Project.

PROJECT DESCRIPTION

The Chacon Farms Project proposes to subdivide approximately 75.7 gross acres of existing agricultural land into 419 single-family residential lots, four open space lots, and associated roadways and infrastructure. The Project site, located at 710 Cawston Avenue North in the City of San Jacinto is designated as Prime Farmland and Farmland of Statewide Importance under the California Department of Conservation's Farmland Mapping and Monitoring Program.

To facilitate the proposed development, the Project requires several discretionary approvals, including a General Plan Amendment to change the land use designation from Very Low Density Residential to Low Density Residential, a Zone Change from Rural Residential to Residential–Low Density, a Planned Development Permit, Site Plan and Design Review, approval of Tentative Tract Map No. 39076, and adoption of the proposed Mitigated Negative Declaration.

LEGAL STANDARD FOR NEGATIVE DECLARATIONS

As the California Supreme Court held, "[i]f no EIR has been prepared for a nonexempt project, but substantial evidence in the record supports a fair argument that the project may result in significant adverse impacts, the proper remedy is to order preparation of an EIR." (*Communities for a Better Env't v. South Coast Air Quality Mgmt. Dist.* (2010) 48 Cal.4th 310, 319-20.) "Significant environmental effect" is defined very broadly as "a substantial or potentially substantial adverse change in the environment." (Pub. Res. Code ["PRC"] § 21068; see also 14 CCR § 15382.) An effect on the environment need not be "momentous" to meet the

CEQA test for significance; it is enough that the impacts are "not trivial." (*No Oil, Inc. v. City of Los Angeles* (1974) 13 Cal.3d 68, 83.) "The 'foremost principle' in interpreting CEQA is that the Legislature intended the act to be read so as to afford the fullest possible protection to the environment within the reasonable scope of the statutory language." (*Communities for a Better Env't v. Cal. Res. Agency* (2002) 103 Cal.App.4th 98, 109.)

The EIR is the very heart of CEQA. (*Bakersfield Citizens for Local Control v. City of Bakersfield (*2004) 124 Cal.App.4th 1184, 1214 (*Bakersfield Citizens*); *Pocket Protectors v. City of Sacramento* (2004) 124 Cal.App.4th 903, 927.) The EIR is an "environmental 'alarm bell' whose purpose is to alert the public and its responsible officials to environmental changes before they have reached the ecological points of no return." (*Bakersfield Citizens, supra*, 124 Cal.App.4th at 1220.) The EIR also functions as a "document of accountability," intended to "demonstrate to an apprehensive citizenry that the agency has, in fact, analyzed and considered the ecological implications of its action." (*Laurel Heights Improvements Assn. v. Regents of Univ. of Cal.* (1988) 47 Cal.3d 376, 392.) The EIR process "protects not only the environment but also informed self-government." (*Pocket Protectors v. City of Sacramento* (2004) 124 Cal.App.4th 903, 927.)

An EIR is required if "there is substantial evidence, in light of the whole record before the lead agency, that the project may have a significant effect on the environment." (PRC § 21080(d); see also *Pocket Protectors*, *supra*, 124 Cal.App.4th at 927.) An MND instead of an EIR is proper only if project revisions would avoid or mitigate the potentially significant effects identified in the initial study "to a point where clearly no significant effect on the environment would occur, and . . . there is no substantial evidence in light of the whole record before the public agency that the project, as revised, may have a significant effect on the environment." (*Mejia v. City of Los Angeles* (2005) 130 Cal.App.4th 322, 331 [quoting PRC §§ 21064.5, 21080(c)(2)].) In that context, "may" means a reasonable possibility of a significant effect on the environment. (PRC §§ 21082.2(a), 21100, 21151(a); *Pocket Protectors, supra*, 124 Cal.App.4th at 927; *League for Protection of Oakland's etc. Historic Res. v. City of Oakland* (1997) 52 Cal.App.4th 896, 904-05.)

An EIR must be prepared rather than an MND "whenever it can be fairly argued on the basis of substantial evidence that the project may have a significant environmental impact." (*No Oil, Inc. v City of Los Angeles* (1974) 13 Cal.3d 68, 75.) Under this "fair argument" standard, an EIR is required if any substantial evidence in the record indicates that a project may have an adverse environmental effect—even if contrary evidence exists to support the agency's decision. (14 CCR § 15064(f)(1); *Pocket Protectors*, *supra*, 124 Cal.App.4th at 931; *Stanislaus Audubon Society v. County of Stanislaus* (1995) 33 Cal.App.4th 144, 150-51; *Quail Botanical Gardens Found., Inc. v. City of Encinitas* (1994) 29 Cal.App.4th 1597, 1602.) The "fair argument" standard creates a "low threshold" favoring environmental review through an EIR rather than through issuance of negative declarations or notices of exemption from CEQA. (*Pocket*

Protectors, *supra*, 124 Cal.App.4th at 928.)

The "fair argument" standard is virtually the opposite of the typical deferential standard accorded to agencies. As a leading CEQA treatise explains:

> This 'fair argument' standard is very different from the standard normally followed by public agencies in making administrative determinations. Ordinarily, public agencies weigh the evidence in the record before them and reach a decision based on a preponderance of the evidence. [Citations]. The fair argument standard, by contrast, prevents the lead agency from weighing competing evidence to determine who has a better argument concerning the likelihood or extent of a potential environmental impact. The lead agency's decision is thus largely legal rather than factual; it does not resolve conflicts in the evidence but determines only whether substantial evidence exists in the record to support the prescribed fair argument.

(Kostka & Zischke*, Practice Under CEQA*, §6.29, pp. 273-74.) The Courts have explained that "it is a question of law, not fact, whether a fair argument exists, and the courts owe no deference to the lead agency's determination. Review is de novo, with a preference for resolving doubts in favor of environmental review." (*Pocket Protectors*, *supra*, 124 Cal.App.4th at 928.)

DISCUSSION

I. The MND Failed to Adequately Analyze and Mitigate the Project's Significant Air Quality Impacts

Matt Hagemann, P.G., C.Hg., and Dr. Paul E. Rosenfeld, Ph.D., from SWAPE reviewed the IS/MND and concluded that it fails to adequately evaluate the Project's air quality and greenhouse gas emissions impacts. SWAPE's comment letter and CVs are attached as Exhibit A. As discussed below, SWAPE concluded that the MND failed to adequately evaluate the Project's air quality impacts and, as a result, emissions and health risk impacts associated with construction and operation of the Project may be underestimated. An EIR is required to disclose and mitigate these impacts.

A. The MND's analysis of the Project's air quality impacts is not supported by substantial evidence.

SWAPE found that the MND underestimated the Project's emissions and therefore cannot be relied upon to determine the significance of the Project's air quality impacts. (Ex. A, p. 1.) To estimate the Project's emissions, the MND utilized the California Emissions Estimator Model ("CalEEMod"). (Ex. A, p. 1.) CalEEMod relies on recommended default values based on site

specific information related to a number of factors (*Id.*) CEQA requires that any changes to the default values must be justified by substantial evidence. (Ex. A, p. 2.)

SWAPE reviewed the Project's CalEEMod output files and found that the values input into the model were inconsistent with information provided in the MND. (Ex. A, p. 2.) This results in an underestimation of the Project's emissions. (*Id*.) As a result, an EIR should be prepared that adequately evaluates the Project's air quality impacts. (*Id.*)

Specifically, SWAPE found that the following values used in the MND's air quality analysis were either inconsistent with information provided in the MND or otherwise unjustified:

1. Unsubstantiated Changes to Land Use Size (Ex. A, p. 1.)
2. Unsubstantiated Amount of Required Demolition (Ex. A, p. 2.)
3. Unsubstantiated Assumption that the Project will be all-electric (Ex. A, p. 3.)

As a result of these errors, the MND underestimates the Project's construction and operational emissions and cannot be relied upon to determine the significance of the Project's air quality impacts.

II. An EIR is Required to Disclose and Mitigate the Project's Greenhouse Gas Emissions.

A. The MND fails to analyze the SCAQMD's 2035 Service Population Efficiency Target

The MND incorrectly concludes that the Project will have less than significant greenhouse gas ("GHG") impacts because it would be below the 2027 interpolated South Coast Air Quality Management District's ("SCAQMD") threshold of 3.96 metric tons of CO2e per service population. However, this interpolated threshold is not supported by any relevant local or state guidance. The SCAQMD population efficiency thresholds are 4.8 metric tons of CO2e per service population for 2020 and 3.0 metric tons of CO2e per service population for 2035. It is unsubstantiated for the MND to interpolate between each benchmark and misleading to use this fabricated benchmark to conclude no significant impacts.

Additionally, the Project's estimated emissions are 3.957 MT CO_2e/SP/year while the asserted threshold is 3.96 MT CO_2e/SP/year, making the difference only 0.003 MT CO_2e/SP/year. This difference is both negligible and counter to the required precision of CalEEMod reporting. CalEEmod reports GHG emissions with a maximum of 2 decimal points, making these reported calculations unsupported by the model calculations. Therefore, in using correct SCAQMD precision, the Project's estimated GHG emissions come out to 4.0 MT

CO_2e/SP/year, which exceeds both the SCAQMD 2035 threshold as well as the unsubstantiated interpolated 2027 threshold.

IS/MND Service Population Efficiency Values	
Proposed Project	**GHG Emissions**
Service Population Efficiency (MT CO_2e/SP/year)	4.0
2027 Interpolated Threshold	4.0*
SCAQMD 2035 Threshold	3.0
Exceeds?	***Yes***

* The IS/MND's interpolated 2027 threshold of 3.96 rounded to two significant figures.

(Ex. A, p. 6.) These exceedances of the SCAQMD's 3.0 MTCO2e/service population threshold indicate a significant GHG impact that must be disclosed and mitigated in an EIR.

B. The MND fails to adequately integrate all necessary and feasible mitigation measures

CEQA provides that all Projects must include mitigation measures "proposed to minimize significant effects on the environment, including, but not limited to, measures to reduce the wasteful, inefficient, and unnecessary consumption of energy." (Pub. Res. Code § 21100(b)(3).)

In 2024, the Southern California Association of Governments' Certified Final Program Environmental Impact Report for Connect Socal 2024[1] included the following mitigation recommendations for GHG emissions:

- Integrate green building measures consistent with CALGreen (California Building Code Title 24), local building codes and other applicable laws, into project design including:
    - Use energy efficient materials in building design, construction, rehabilitation, and retrofit.

[1] "Certified Final Program Environmental Impact Report for Connect SoCal 2024." SCAG, May 2020, available at: https://scag.ca.gov/program-environmental-impact-report-0.

  - Install energy-efficient lighting, heating, and cooling systems (cogeneration); water heaters; appliances; equipment; and control systems beyond Title 24 minimum requirements.
  - Reduce lighting, heating, and cooling needs by taking advantage of light-colored roofs, trees for shade, and sunlight.
  - Incorporate passive environmental control systems that account for the characteristics of the natural environment.
  - Use high-efficiency lighting and cooking devices.
  - Incorporate passive solar design.
  - Use high-reflectivity building materials and multiple glazing.
  - Use no gas-powered landscape maintenance equipment.
  - Install alternative fuel (i.e., electric, hydrogen-fueled, etc.) vehicle charging and fueling stations.
  - Encourage projects to reduce natural gas infrastructure in buildings and/or reduce the use of natural gas appliances, with exceptions for limited uses.
- Measures that encourage transit use, carpooling, bike-share and car-share programs, active transportation, and parking strategies, including, but not limited to the following:
  - Promote transit-active transportation coordinated strategies.
  - Increase bicycle carrying capacity on transit and rail vehicles.
  - Improve or increase access to transit.
  - Increase access to common goods and services, such as groceries, schools, day care, and medical care.
  - Incorporate the neighborhood electric vehicle network.
  - Orient the project toward transit, bicycle and pedestrian facilities.
  - Improve pedestrian or bicycle networks or transit service.
  - Provide traffic calming measures.
  - Limit or eliminate park supply.
  - Provide parking cash-out programs.
  - Implement or provide access to commute reduction program.
- Incorporate bicycle and pedestrian facilities into project designs, maintaining these facilities, and providing amenities incentivizing their use; and planning for and building local bicycle projects that connect with the regional network.
- Improving transit access to rail and bus routes by incentives for construction and transit facilities within developments, and/or providing dedicated shuttle service to transit stations.
- Adopt employer trip reduction measures to reduce employee trips such as vanpool and carpool programs, provide end-of-trip facilities, and telecommuting programs.
- Designate a percentage of parking spaces for ride-sharing vehicles or high-occupancy vehicles and provide adequate passenger loading and unloading for those vehicles.
- Require at least five percent of all vehicle parking spaces include electric vehicle charging stations, or at a minimum, require the appropriate infrastructure to facilitate sufficient electric charging for passenger vehicles and trucks to plug-in.
- Implement preferential parking permit program.

- Encourage telecommuting and alternative work schedules.
- Implement commute trip reduction marketing.
- Price workplace parking.

The MND fails to consider the Connect Socal 2024 EIR mitigation measures for impacts to GHG emissions. An EIR must be prepared that incorporates these suggested mitigation measures as applicable to ensure that the Project's individual and cumulative impacts are minimized to the extent possible

II. There is Substantial Evidence that the Project may have Significant Impacts on Indoor Air Quality

The MND fails to discuss, disclose, analyze, and mitigate the significant health risks posed by the Project from formaldehyde, a toxic air contaminant ("TAC"). Certified Industrial Hygienist, Francis Offermann, PE, CIH conducted a review of the Project and relevant documents regarding the Project's indoor air emissions. Mr. Offermann is one of the world's leading experts on indoor air quality and has published extensively on the topic. As discussed below and in Mr. Offermann's comments, the Project's emissions of formaldehyde will result in very significant cancer risks to future residents of the Project's residential units.

Formaldehyde is a known human carcinogen and is listed by the State as a TAC. The South Coast Air Quality Management District ("SCAQMD") has established a significance threshold of health risks for carcinogenic TACs of 10 in one million. (Ex. B, p. 2.) The MND fails to acknowledge the significant indoor air emissions that will result from the Project. Specifically, there is no discussion of impacts or health risks, no analysis, and no identification of mitigations for significant emissions of formaldehyde from the Project.

Mr. Offermann explains that many composite wood products typically used in home and apartment building construction contain formaldehyde-based glues which off-gas formaldehyde over a very long period. He states, "[t]he primary source of formaldehyde indoors is composite wood products manufactured with urea-formaldehyde resins, such as plywood, medium density fiberboard, and particleboard. These materials are commonly used in building construction for flooring, cabinetry, baseboards, window shades, interior doors, and window and door trims." (Ex. B, pp. 2-3.)

Mr. Offermann found that future residents of the Project's residential units will be exposed to a cancer risk of 120 per million, even assuming all materials are compliant with the California Air Resources Board's ("CARB") formaldehyde airborne toxics control measure. (Ex. B, pp. 3-4) This is more than 12 times SCAQMD's CEQA significance threshold of 10 per million.

Mr. Offermann also found that there is a fair argument that future employees of the commercial spaces will be exposed to a cancer risk from formaldehyde of approximately 17.7 per million, even assuming all materials are compliant with CARB's formaldehyde airborne toxics control measure. (*Id.*, pp. 4-5.) This exceeds the SCAQMD CEQA significance threshold for airborne cancer risk of 10 per million. (*Id.*)

Mr. Offermann concludes that these significant environmental impacts must be analyzed in an EIR and mitigation measures should be imposed to reduce the risk of formaldehyde exposure. (Ex. B, pp. 5, 12-14.) He prescribes a methodology for estimating the Project's formaldehyde emissions in order to do a more project-specific health risk assessment. (*Id*., pp. 6-10.) Mr. Offermann also suggests several feasible mitigation measures, such as requiring the use of no-added-formaldehyde composite wood products, which are readily available. (*Id*., pp. 12-14.) Mr. Offermann also suggests requiring air ventilation systems which would reduce formaldehyde levels. (*Id*.) Since the MND does not analyze this impact at all, none of these or other mitigation measures have been considered.

When a Project exceeds a duly adopted CEQA significance threshold, as here, this alone establishes substantial evidence that the project will have a significant adverse environmental impact. Indeed, in many instances, such air quality thresholds are the only criteria reviewed and treated as dispositive in evaluating the significance of a project's air quality impacts. (See, e.g. *Schenck v. County of Sonoma* (2011) 198 Cal.App.4th 949, 960 [County applies Air District's "published CEQA quantitative criteria" and "threshold level of cumulative significance"]; see also *Communities for a Better Env't v. Cal. Res. Agency* (2002) 103 Cal.App.4th 98, 110-111 ["A 'threshold of significance' for a given environmental effect is simply that level at which the lead agency finds the effects of the project to be significant"].)

The California Supreme Court made clear the substantial importance that an air district significance threshold plays in providing substantial evidence of a significant adverse impact. (*Communities for a Better Env't v. South Coast Air Quality Management Dist.* (2010) 48 Cal.4th 310, 327 ["As the District's established significance threshold for NOx is 55 pounds per day, these estimates [of NOx emissions of 201 to 456 pounds per day] constitute substantial evidence supporting a fair argument for a significant adverse impact."].) Since expert evidence demonstrates that the Project will exceed the SCAQMD's CEQA significance threshold, there is substantial evidence that an "unstudied, ***potentially significant environmental effect[]***" exists. (See, *Friends of Coll. of San Mateo Gardens v. San Mateo Cty. Cmty. Coll. Dist.* (2016) 1 Cal.5th 937, 958 [emphasis added].)

The failure of the MND to address the Project's formaldehyde emissions is contrary to the California Supreme Court's decision in *California Building Industry Ass'n v. Bay Area Air Quality Mgmt. Dist.* ("*CBIA*") (2015) 62 Cal.4th 369, 386. In that case, the Supreme Court expressly holds that potential adverse impacts to future users and residents from pollution

generated by a proposed project ***must be addressed*** under CEQA. At issue in *CBIA* was whether the Air District could enact CEQA guidelines that advised lead agencies that they must analyze the impacts of adjacent environmental conditions on a project. The Supreme Court held that CEQA does not generally require lead agencies to consider the environment's effects on a project. (*CBIA*, 62 Cal.4th at 800-01.) However, to the extent a project may exacerbate existing environmental conditions at or near a project site, those would still have to be considered pursuant to CEQA. (*Id*. at 801.) In so holding, the Court expressly held that CEQA's statutory language required lead agencies to disclose and analyze "impacts on ***a project's users or residents*** that arise ***from the project's effects*** on the environment." (*Id*. at 800 [emphasis added].)

The carcinogenic formaldehyde emissions identified by Mr. Offermann are not an existing environmental condition. Those emissions will be from the Project. People will be residing in the Project's buildings once built and emitting formaldehyde. Once built, the Project will begin to emit formaldehyde at levels that pose significant direct and cumulative health risks. The Supreme Court in *CBIA* expressly finds that this type of air emission and health impact by the project on the environment and a "project's users and residents" must be addressed in the CEQA process. The existing TAC sources near the Project site would have to be considered in evaluating the cumulative effect on future residents of both the Project's TAC emissions as well as those existing off-site emissions.

The Supreme Court's reasoning is well-grounded in CEQA's statutory language. CEQA expressly includes a project's effects on human beings as an effect on the environment that must be addressed in an environmental review. "Section 21083(b)(3)'s express language, for example, requires a finding of a 'significant effect on the environment' (§ 21083(b)) whenever the 'environmental effects of a project will cause substantial adverse effects *on human beings,* either directly or indirectly.'" (*CBIA*, 62 Cal.4th at 800.) Likewise, "the Legislature has made clear—in declarations accompanying CEQA's enactment—that public health and safety are of great importance in the statutory scheme." (*Id*. [citing e.g., PRC §§ 21000, 21001].) It goes without saying that the future residents of the Project are human beings and their health and safety must be subject to CEQA's safeguards.

The City has a duty to investigate issues relating to a project's potential environmental impacts. (See, *County Sanitation Dist. No. 2 v. County of Kern*, (2005) 127 Cal.App.4th 1544, 1597–98. ["[U]nder CEQA, the lead agency bears a burden to investigate potential environmental impacts."].) The proposed buildings will have significant impacts on air quality and health risks by emitting cancer-causing levels of formaldehyde into the air that will expose future residents to cancer risks potentially in excess of SCAQMD's threshold of significance for cancer health risks of 10 in a million. Currently, outside of Mr. Offermann's comments, the City does not have any idea what risks will be posed by formaldehyde emissions from the Project. As a result, the City must include an analysis and discussion in an EIR which discloses and analyzes

the health risks that the Project's formaldehyde emissions may have on future residents and identifies appropriate mitigation measures.

Mr. Offermann's comments are substantial evidence that the Project may have a significant impact on human health, necessitating preparation of an EIR.

III. **An EIR is Required to Disclose and Mitigate the Project's Significant Impacts to Agricultural Resources**

Gregory and Henry House from House Agricultural Consultants ("House") reviewed the IS/MND and concluded that it fails to adequately evaluate the Project's impacts on agricultural resources. As discussed below, House concluded that the MND failed to comply with CEQA's requirements to analyze impacts on agricultural resources and failed to comply with the general-plan policies of the City of San Jacinto. An EIR is required to disclose and mitigate these impacts.

A. **The MND Fails to Adequately Analyze Impacts to Agricultural Resources**

i. Conversion of Prime Farmland and Farmland of Statewide Importance

The Project is located on Prime Farmland and Farmland of Statewide importance. (Exhibit C, pp. 1-2.) The MND expressly acknowledges that the Project will convert these agricultural resources into urban uses but, nevertheless, concludes that the impact is less than significant because the City's General Plan anticipates future urban development on the site. (*Id.*)

As House explains, this conclusion is legally insufficient. (Ex. C, pp. 1-2.) CEQA requires an analysis of whether a project will convert Prime Farmland of Statewide Importance into nonagricultural uses. (*Id.*) The General Plan's anticipation of future urban development on the site does not eliminate the environmental impact of converting agricultural land, no does it satisfy CEQA's requirement to analyze the impacts of that conversion. However, the MND asserts that the General Plan's designation makes the impacts of that conversion less than significant, without providing any analysis supporting that conclusion. (*Id.*) This conclusory reasoning violates CEQA's requirements. Courts have held that the baseline for CEQA analysis must be the "existing physical conditions in the affected area." *Communities for a Better Env't v. S. Coast Air Quality Mgmt. Dist.*, 48 Cal. 4th 310, 320. Therefore, it is improper for the City to utilize the potential future conditions of the site predicated on the General Plan's designation as the baseline for analysis.

The General Plan is not the CEQA baseline. For example, in *Woodward Park*, a developer proposed building a 477,000–square–foot office park and shopping center on a vacant lot. The existing zoning and plan designations allowed a 694,000–square–foot facility to be built there. (*Woodward Park Homeowners Assn., Inc. v. City of Fresno* (2007) 149 Cal. App. 4th 683, 698.) The EIR, for the most part, compared the proposed project's impacts on traffic congestion and air pollution with the larger, hypothetical development allowed by the applicable zoning and plans rather than with the vacant lot or the existing physical situation. (*Id*. at pp. 707–708, 58.) The court concluded that the "hypothetical office park was a legally incorrect baseline," that the EIR "failed to use the existing physical environment as the environmental baseline, and [that] none of the city's or [developer's] arguments show[ed] that any other baseline was permissible." (*Id*. at pp. 691, 711; see also, *Madera Oversight Coal., Inc. v. Cty. of Madera* (2011) 199 Cal. App. 4th 48, 91.)

The analysis must be centered on the existing conditions of the site: Prime Farmland and Farmland of Statewide Importance. An EIR must be prepared to analyze the impacts on agricultural resources.

ii. Failure to consider cumulative impacts

CEQA requires that agencies evaluate whether a project's incremental contribution to environmental impacts is cumulatively considerable. Here, the MND acknowledges that the Project will convert Prime Farmland and Farmland of Statewide Importance, but fails to analyze the Project's contribution to the ongoing cumulative conversion of agricultural lands within the region.

The MND fails to analyze regional farmland conversion trends or to identify other approved or reasonably foreseeable development projects for the purpose of assessing the cumulative loss of agricultural resources. Instead, the MND merely concludes that there would be no off-site conversion of farmland because the construction would remain within the Project footprint. (Ex. C, p. 2.) This is a misunderstanding of CEQA's required cumulative impacts inquiry. The relevant inquiry is not whether the Project extends beyond its boundaries, but rather if the conversion contemplated by the Project contributes to the broader cumulative loss of agricultural resources throughout a region in such a way that it is cumulatively considerable. (*Id.*) An EIR is required to analyze and mitigate the cumulative impact to agricultural resources.

iii. Failure to incorporate proper mitigation

The MND also fails to incorporate feasible and readily available mitigation measures. As explained by House, agricultural conversation easements ("ACEs") are the accepted method of mitigating permanent farmland conversion in California and are regularly required to offset the loss of Prime Farmland and Farmland of Statewide Importance, like the loss caused by this Project. (Exhibit C, pp. 2-3.) House concludes that the purchase of an ACE could reduce the

impact the lost farmland to less-than-significant. (*Id.*)

However, rather than analyzing this mitigation measure, the MND simply concludes that no mitigation is required because, as discussed above, the General Plan anticipated urban development at the Project site. Based on the failure to analyze and implement this feasible mitigation measure, an EIR is required to analyze and mitigate the impact to agricultural resources.

B. The MND Fails to Demonstrate Consistency with the City's General Plan

The MND fails to demonstrate consistency with the City of Jacinto General Plan's policies around the protection of agricultural resources. Under CEQA, an environmental document must "discuss any inconsistencies between the proposed project and applicable general plans, specific plans, and regional plans." CEQA Guidelines § 15125(d). House concludes that the MND conflicts with multiple General Plan policies intended to protect agricultural resources and minimize the conversion of farmland.

Specifically, the General Plan encourages redevelopment and infill projects that reduce development pressure on agricultural lands and calls on the City to work with landowners to maintain land in agricultural production where feasible. (Ex. C, p. 3.)

Additionally, as House explains, the MND does not evaluate whether feasible alternatives or mitigation measures could further the General Plan's policies to reduce the permanent loss of productive agriculture. (Ex. C, p. 3.) Instead, it merely concludes no mitigation is required because of the General Plan's anticipation of future urban development. (*Id.*) By selectively relying on the General Plan's land use designation while ignoring its agricultural resource policies, the MND fails to provide the adequate analysis required under CEQA.

IV. An EIR is Required to Adequately Disclose and Mitigate the Project's Significant Impacts to Biological Resources.

Expert wildlife ecologist Dr. Shawn Smallwood, Ph.D., found several deficiencies in the MND's analysis of the Project's impacts on wildlife. Dr. Smallwood's comment and CV are attached as Exhibit D. As discussed below, Dr. Smallwood provides substantial evidence that the MND failed to accurately characterize the Project's environmental setting, failed to adequately analyze significant impacts to wildlife, failed to provide adequate mitigation measures, and failed to properly respond to comments on biological resources. As a result, there is a fair argument that the Project will have significant impacts to biological resources.

A. The MND fails to accurately characterize the Project's environmental setting

Dr. Smallwood's associate Noriko Smallwood conducted surveys of the Project site by walking the site's perimeters where accessible, scanning for wildlife with binoculars, and utilizing an acoustic bat detector. (Ex. D, p. 2.) On March 28, 2026, she conducted a diurnal survey for 2.57 hours (*Id.*) On March 29, 2026, she conducted a diurnal survey for 0.58 hours and a nocturnal survey for 2.58 hours. During her surveys, Ms. Smallwood observed 42 species of vertebrate wildlife utilizing the Project site, seven of which are special-status species including Tricolored blackbird, Canyon Bat, Cooper's Hawk, and California Gull, among others. (*Id.* at pp. 9-10.) Combined with the species identified during the biological studies prepared for the Project, at least four special-status species depend on the Project site as habitat. (*Id*. at pp. 15-16.)

Dr. Smallwood's found that the site hosted multiple special-status species, including the tricolored blackbird, which is listed as Threatened under the California Endangered Species Act. Dr. Smallwood also explains that the MND states that "[n]o candidate, sensitive, or special-status species are expected to occur on the Proposed Project Site," despite the underlying biological report documenting four special-status species and Dr. Smallwood's surveys identifying additional special-status species utilizing the site. (Ex. D, pp. 15-16.) Given Dr. Smallwood's conclusion that the MND failed to accurately characterize the environmental setting, including the occurrence likelihoods of special-status species, the Project's description of the environmental setting is insufficient. The City must prepare an EIR to analyze this discrepancy and it's impacts on those special-status species.

B. The MND fails to adequately analyze the project's impacts on wildlife habitat loss and fragmentation, wildlife-vehicle collisions, and cumulative impacts.

Based on Ms. Smallwood's observations at the Project site and Dr. Smallwood's extensive knowledge on wildlife habitat, wildlife movement, and conservation of special-status species, Dr. Smallwood concluded that the MND failed to adequately address and mitigate numerous significant impacts to biological resources, including significant habitat loss, interference with wildlife movement, wildlife-vehicle collisions, and cumulative impacts. (Ex. D, pp. 29-40.) Accordingly, there is a fair argument that there will be significant impacts to biological resources, and the City must prepare and circulate an EIR.

1. <u>Habitat loss and lost reproductive capacity</u>.

Dr. Smallwood determined that the Project will adversely impact the 55 species of vertebrate wildlife observed on the Project site. (Ex. D, p. 29.) However, the extent to which this habitat loss will impact avian nest sites was not analyzed in the MND. The loss of habitat would lead to a loss of nesting sites for birds, which will result in lost reproductive capacity. (*Id.* at 30.)

Dr. Smallwood predicts that the Project would result in "the loss of 145 nest sites and 202 nest attempts per year" (*Id.*) The loss of nests, in turn, would result in the loss of 659 birds each year (*Id.*) Dr. Smallwood concludes "The loss of 659 birds per year would be a loss of significant habitat value that is currently provided by the project site. Most is not all these birds are protected by the federal Migratory Bird Treaty Act and by California's Migratory Bird Protection Act, both of which are intended to most strongly protect breeding migratory birds." (*Id.* at 31.) The loss of 659 birds every year is a significant impact that requires analysis and mitigation through an EIR.

2. Wildlife-vehicle Collisions

Dr. Smallwood determined that the Project would result in significant wildlife mortality due to wildlife-vehicle collisions. He notes that "Project-generated traffic would endanger wildlife that must, for various reasons, cross roads used by the project's traffic" (Ex. D, p. 31.) The Project is predicted to generate 4,772,698 annual vehicle miles traveled (VMT) from trucks and autos. Dr. Smallwood predicts that Project-generated traffic from this site would amount to about 6,101 vertebrate wildlife fatalities every year. (*Id.* at 33.) Though 6,101 vertebrate wildlife fatalities per year is significant, the MND fails to analyze this potential impact or seek to mitigate it. Dr. Smallwood concludes that mitigation measures to "improve wildlife safety along roads are available and are feasible" and that the EIR needs to analyze their feasibility with the Project. (*Id.* at 35.) Accordingly, there is substantial evidence supporting a fair argument that this Project will have a significant impact on wildlife movement, and those impacts need to be studied and mitigated in an EIR.

3. Cumulative Impacts

Finally, Dr. Smallwood concluded that the EIR utilized a flawed cumulative impacts analysis. He notes that the EIR "relies on the notion that mitigation measures to reduce direct and indirect project impacts also reduce the projects contributions to cumulative impacts to less than significant" which is "inconsistent with CEQA's definition of cumulative impacts" because the Project can still "incrementally contribute to the effects of other projects for a significant cumulative impact." (Ex. D, p. 34.)

Indeed, a cumulative impact determination should be based on an analysis of the Project's incremental effects "viewed in connected with the effects of past projects, the effects of other current projects, and the effects of probable future projects." (14 CCR § §15065(a)(3).) However, the EIR does not address any other past, present, or future projects. As noted by Dr. Smallwood, the EIR concludes that the proposed mitigation measures reduce cumulative impacts to less than significant with no discussion of other projects. (Ex. D, p. 34.) This flawed method is directly

counter to CEQA's required analysis of cumulative impacts. Rather than evaluating the Project's incremental contribution to cumulative impacts in the context of other past, present, and reasonably foreseeable future projects, the MND simply concludes that mitigation measures reduce cumulative impacts to less than significant. (*Id.*) As Dr. Smallwood explains, this reasoning is inconsistent with CEQA's cumulative impacts requirement because it fails to evaluate whether the Project's incremental contribution is cumulatively considerable. (*Id.*) Accordingly, substantial evidence supports a fair argument that the MND fails to adequately analyze cumulative biological impacts, requiring the preparing of an EIR.

C. The MND Fails to Adopt or Evaluate Feasible Mitigation Measures for Significant Biological Impacts

CEQA requires adoption of all feasible mitigation measures capable of substantially lessening potentially significant impacts. Dr. Smallwood concludes that the MND fails to satisfy that requirement because it does not evaluate feasible and available mitigation measures related to habitat loss, wildlife-vehicle collisions, impacts to special-status species, and cumulative impacts. (Ex. D, pp. 35-40.) Instead, the MND relies on generalized mitigation measures that do not address the magnitude of the Project's anticipated impacts. (*Id.*) Accordingly, the MND fails to demonstrate that the Project's impacts can be reduced to a less-than-significant level, requiring the preparation of an EIR.

CONCLUSION

There is substantial evidence of a fair argument that this Project will have significant impacts on air quality, greenhouse gas emissions, indoor air quality, agricultural resources, and biological resources. Accordingly, SAFER respectfully requests that the City Council refrain from approving the Project until an EIR is created to adequately analyze and mitigate the impacts raised in this comment.

Thank you for your attention to these comments.

Sincerely,

Aleja Cretcher

Subject: Comments on the Chacon Farms Project (SCH No. 2025101241)

Dear Mr. Drury,

We have reviewed the October 2025 Draft Initial Study/Mitigated Negative Declaration ("IS/MND") for the Chacon Farms Project ("Project") located in the City of San Jacinto ("City"). The Project proposes to construct 419 single family residential lots on the 75.7-acre site.

Our review concludes that the IS/MND fails to adequately evaluate the Project's air quality and greenhouse gas impacts. As a result, emissions and health risk impacts associated with construction and operation of the proposed Project may be underestimated and inadequately addressed. An Environmental Impact Report ("EIR") should be prepared to adequately assess and mitigate the potential air quality and greenhouse gas impacts that the Project may have on the environment.

Air Quality

Unsubstantiated Input Parameters Used to Estimate Project Emissions

When reviewing the Project's CalEEMod output files, provided in the Air Quality, Greenhouse Gas, and Energy Impact Study ("AQ Study") as Appendix A-1 to the IS/MND, we identified several model inputs related to Project construction that are inconsistent with information disclosed in the IS/MND. An EIR should be prepared to include an updated air quality analysis that provides a more detailed evaluation of the impact that construction and operation of the Project may have on local and regional air quality.

Unsubstantiated Changes to Land Use Size

Review of the CalEEMod output files demonstrates that the "Chacon Farms Detailed Report" model includes 817,050-SF and 63.4 acres of "Single Family Housing" (see screenshot below) (Appendix A-1, pp. 75).

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Single Family Housing	419	Dwelling Unit	63.4	817,050	4,907,687	—	1,353	—

While the IS/MND proposes to develop 419 single family residential lots, the IS/MND does not specify the square footage of the proposed building area. The IS/MND states:

> "The Project involves subdividing 75.7 gross acres into 419 single family residential lots, four open space lots (Tentative Tract Map 39076), as shown on Figure 4: Site Plan Schematic, TTM 30926. The lots generally range in size from 4,500 square feet (SF) to 6,500 SF as shown in Appendix I: Planned Development Permit" (p. 16-17).

As indicated above, the IS/MND only includes the range in square footage for the proposed residential lots. The residential square footage included in the model is thus unsupported and may be underestimated. Additionally, the model includes only 63.4 acres of total land use while the IS/MND indicates that the Project site encompasses 75.7 acres (p. 16-17). The modeled lot acreage is therefore underestimated by approximately 12.3 acres.[1]

This underestimation presents an issue, as the land use size feature is used throughout CalEEMod to determine default variable and emission factors that affect the model's calculations. The square footage of each land use is used for certain calculations such as architectural coatings and energy use.[2] Additionally, the lot acreage of the proposed Project is used to assign construction default data such as grading, site preparation, and off-road equipment lists.[3] By potentially underestimating the size of the proposed housing and the acreage of the Project site, the model may underestimate the Project's construction and operational emissions and should not be relied upon to determine Project significance.

Unsubstantiated Amount of Required Demolition

Review of the CalEEMod output files demonstrates that the "Chacon Farms Detailed Report" model includes 28,500-SF of demolition debris (see screenshot below) (Appendix A-1, pp. 135).

Phase Name	Material Imported (cy)	Material Exported (cy)	Acres Graded (acres)	Material Demolished (Building Square Footage)	Acres Paved (acres)
Demolition	0.00	0.00	0.00	28,500	—
Site Preparation	—	—	60.0	0.00	—
Grading	253,203	—	330	0.00	—
Paving	0.00	0.00	0.00	0.00	4.62

Regarding the existing land uses, the IS/MND states:

[1] Calculated: (75.7 proposed lot acreage) – (64.4 acres modeled of "Single Family Housing" space) = 12.3 underestimated lot acreage.
[2] "CalEEMod User Guide." CAPCOA, April 2022, available at: https://www.caleemod.com/documents/user-guide/01_User%20Guide.pdf, p. 30.
[3] "CalEEMod User Guide." CAPCOA, April 2022, available at: https://www.caleemod.com/documents/user-guide/01_User%20Guide.pdf, p. 30, 35.

> "The Project Site is currently occupied by Chacon Farms and Bruno Ranches agricultural operations. Two single-family residential uses occupied by caretakers are also located on the Proposed Project Site" (p. 10).

However, the IS/MND fails to further specify the total square footage associated with the existing land uses that need to be demolished. The amount of demolition material inputted into the model may thus be underestimated and we cannot verify that only 28,500-SF would be demolished during Project construction.

This potential underestimation presents an issue, as demolition material is used to calculate emissions associated with fugitive dust, debris removal, as well as exhaust from hauling trucks traveling to and from the Project site.[4] By including an unsubstantiated amount of demolition, the model may underestimate the Project's construction-related emissions and should not be relied upon to determine Project significance.

All-Electric Building Design Should Be Incorporated as Mitigation

Review of the CalEEMod output files demonstrates that "Chacon Farms Detailed Report" model includes changes to the default number of hearths and energy use values (see screenshot below) (Appendix A-1, pp. 147).

Screen	Justification
Land Use	Per site plan
Construction: Construction Phases	Adjusted for 2028 opening year
Operations: Hearths	No woodstoves
Operations: Energy Use	Project will be all electric

As previously stated, the CalEEMod User's Guide requires any changes to model defaults be justified.[5] The justifications provided for these changes are:

> "No woodstoves" and the "Project will be all electric" (Appendix A-1, pp. 147).

While the justification for the changes to hearths only references woodstoves—whose removal is substantiated pursuant to South Coast Air Quality Management District ("SCAQMD") Rule 445—we take issue with the apparent removal of gas-powered hearths from the model. In regard to the Project's natural gas usage, the IS/MND states that "[t]he Project will be 100 percent electric and will not require natural gas" (p. 70).

However, the assumption that the Project will be all-electric in the model remains unsupported until the IS/MND incorporates an all-electric building design as mitigation. According to the Association of Environmental Professionals ("AEP") *CEQA Portal Topic Paper* on mitigation measures:

[4] "CalEEMod User Guide." CAPCOA, April 2022, available at: https://www.caleemod.com/documents/user-guide/01_User%20Guide.pdf, p. 38.
[5] "CalEEMod User Guide." CAPCOA, April 2022, available at: https://www.caleemod.com/documents/user-guide/01_User%20Guide.pdf, p. 13, 14.

> "While not 'mitigation', a good practice is to include those project design feature(s) that address environmental impacts in the mitigation monitoring and reporting program (MMRP). Often the MMRP is all that accompanies building and construction plans through the permit process. If the design features are not listed as important to addressing an environmental impact, it is easy for someone not involved in the original environmental process to approve a change to the project that could eliminate one or more of the design features without understanding the resulting environmental impact."[6]

As demonstrated above, PDFs that are not formally included in a mitigation monitoring and reporting program ("MMRP") may be eliminated from the Project's design altogether. Until an all-electric Project design is incorporated as a formal mitigation measure, we cannot fully guarantee that it would be implemented on the Project site and the model should not be relied upon to determine Project significance.[7]

Greenhouse Gas

Failure to Adequately Evaluate Greenhouse Gas Impacts

The IS/MND estimates that the Project would generate net annual greenhouse gas ("GHG") emissions of 5,354 metric tons of carbon dioxide equivalents per year ("MT CO_2e/year") or 3.957 metric tons of carbon dioxide equivalents per service population per year ("MT CO_2e/SP/year") (see excerpt below) (p. 87, Table 22).

Table 22: Opening Year Unmitigated Project-Related Greenhouse Gas Emissions

Category	Greenhouse Gas Emissions (Metric Tons/Year)[1]						
	Bio-CO2	Non Bio-CO_2	CO_2	CH_4	N_2O	R	CO_2e
Area Sources[2]	0.00	7.21	7.21	0.00	0.00	0.00	7.23
Energy Usage[3]	0.00	0.00	0.00	0.00	0.00	0.00	0.00
Mobile Sources[4]	0.00	4,873.00	4,873.00	0.21	0.23	6.35	4,954.00
Solid Waste[5]	34.20	0.00	34.20	3.42	0.00	0.00	120.00
Water[6]	5.41	150.00	155.41	0.56	0.01	0.00	174.00
Refrigeration	0.00	0.00	0.00	0.00	0.00	0.97	0.97
Construction[7]	0.00	95.24	95.24	0.00	0.01	0.07	97.95
Total Emissions	39.61	5,124.01	5,163.62	4.19	0.25	7.39	5,354.15
Service Population							1,353
Total Emissions per Service Population (MTCO2e/yr/SP)							3.957
2027 Interpolated SCAQMD Threshold (MTCO2e/yr/SP)							3.960
Exceeds Threshold?							No

Notes:
1 Source: CalEEMod Version 2022.1.1.22
2 Area sources consist of GHG emissions from consumer products, architectural coatings, and landscape equipment.
3 Energy usage consist of GHG emissions from electricity and natural gas usage.
4 Mobile sources consist of GHG emissions from vehicles.
5 Solid waste includes the CO_2 and CH_4 emissions created from the solid waste placed in landfills.
6 Water includes GHG emissions from electricity used for transport of water and processing of wastewater.
7 Construction GHG emissions based on a 30-year amortization rate.

The IS/MND thus concludes that the Project would result in a less-than-significant GHG impact, stating:

> "The Project would be below the 2027 interpolated SCAQMD threshold of 3.96 metric tons of CO_2e per service population, and therefore the Project would have a less than significant impact" (p. 87).

However, the IS/MND's analysis, as well as the subsequent less-than-significant impact conclusion, is unsupported for two reasons.

First, the use of a 2027 interpolated threshold is not supported by any relevant local or state guidance and therefore lacks substantial evidence as required under CEQA. The SCAQMD provides service population efficiency thresholds of 4.8- and 3.0-MT CO_2e/SP/year for years 2020 and 2035, respectively.[8] The IS/MND, however, interpolates between these two benchmarks to derive a Project-specific threshold for the Project's operational year, stating:

> "The Project was compared to the Tier 4 per service population threshold, interpolated for opening year 2027 at 3.96 MTCO2e per year per service population" (p. 86).

The IS/MND's creation of its own 2027 threshold is wholly unsubstantiated, as neither SCAQMD guidance nor any identified state-level guidance recommends, endorses, or even discusses the interpolation of thresholds between benchmark years. Absent such support, the use of the 3.96 MT

[8] "Minutes for the GHG CEQA Significance Threshold Stakeholder Working Group #15." SCAQMD, September 2010, *available at:* http://www.aqmd.gov/docs/default-source/ceqa/handbook/greenhouse-gases-(ghg)-ceqa-significance-thresholds/year-2008-2009/ghg-meeting-15/ghg-meeting-15-minutes.pdf, p. 2.

CO_2e/SP/year threshold is incorrect and the IS/MND's less-than-significant GHG impact conclusion should not be relied upon.

Second, the difference between the Project's estimated emissions of 3.957 MT CO_2e/SP/year and the asserted threshold of 3.96 MT CO_2e/SP/year is only 0.003 MT CO_2e/SP/year, which is not only negligible but also exceeds the precision of CalEEMod itself. CalEEMod reports GHG emissions estimates with a maximum of 2 decimal points and any value carried to a third decimal place is not supported by the model calculations.

Moreover, the SCAQMD service population efficiency thresholds themselves are expressed using two significant figures. Accordingly, the Project's estimated emissions should be rounded and compared using the same level of precision as the comparable thresholds. Applying greater precision than the applicable threshold is methodologically improper. Thus, when using two significant figures (in this case rounding to one decimal place), the Project's estimated emissions equal 4.0 MT CO_2e/SP/year, exceeding the SCAQMD 2035 threshold as well as the unsupported 2027 interpolated threshold (see table below).

IS/MND Service Population Efficiency Values

Proposed Project	**GHG Emissions**
Service Population Efficiency (MT CO_2e/SP/year)	4.0
2027 Interpolated Threshold	4.0*
SCAQMD 2035 Threshold	3.0
Exceeds?	***Yes***

* The IS/MND's interpolated 2027 threshold of 3.96 rounded to two significant figures.

As demonstrated above, the Project's service population efficiency value exceeds the SCAQMD 2035 efficiency target of 3.0 MT CO_2e/SP/year and the 2027 interpolated threshold of 3.96 MT CO_2e/SP/year, indicating a potentially significant impact not previously identified or addressed by the IS/MND. As a result, the IS/MND's less-than-significant GHG impact conclusion is unsupported. An EIR should be prepared, including an updated GHG analysis and incorporating additional mitigation measures to reduce the Project's GHG emissions to less-than-significant levels.

Mitigation

Feasible Mitigation Measures Available to Reduce Emissions

The IS/MND is required under CEQA to implement all feasible mitigation to reduce the Project's potential impacts. As demonstrated in the sections above, the Project would result in potentially significant GHG impacts that should be mitigated further.

To reduce the GHG emissions associated with the Project, we recommend several mitigation measures as listed below. The Southern California Association of Governments' Certified Final Program

Environmental Impact Report for Connect SoCal 2024 recommends the following Project-level greenhouse gas quality mitigation measures: [9]

- Integrate green building measures consistent with CALGreen (California Building Code Title 24), local building codes and other applicable laws, into project design including:
    - Use energy efficient materials in building design, construction, rehabilitation, and retrofit.
    - Install energy-efficient lighting, heating, and cooling systems (cogeneration); water heaters; appliances; equipment; and control systems beyond Title 24 minimum requirements.
    - Reduce lighting, heating, and cooling needs by taking advantage of light-colored roofs, trees for shade, and sunlight.
    - Incorporate passive environmental control systems that account for the characteristics of the natural environment.
    - Use high-efficiency lighting and cooking devices.
    - Incorporate passive solar design.
    - Use high-reflectivity building materials and multiple glazing.
    - Use no gas-powered landscape maintenance equipment.
    - Install alternative fuel (i.e., electric, hydrogen-fueled, etc.) vehicle charging and fueling stations.
    - Encourage projects to reduce natural gas infrastructure in buildings and/or reduce the use of natural gas appliances, with exceptions for limited uses.
- Measures that encourage transit use, carpooling, bike-share and car-share programs, active transportation, and parking strategies, including, but not limited to the following:
    - Promote transit-active transportation coordinated strategies.
    - Increase bicycle carrying capacity on transit and rail vehicles.
    - Improve or increase access to transit.
    - Increase access to common goods and services, such as groceries, schools, day care, and medical care.
    - Incorporate the neighborhood electric vehicle network.
    - Orient the project toward transit, bicycle and pedestrian facilities.
    - Improve pedestrian or bicycle networks or transit service.
    - Provide traffic calming measures.
    - Limit or eliminate park supply.
    - Provide parking cash-out programs.
    - Implement or provide access to commute reduction program.
- Incorporate bicycle and pedestrian facilities into project designs, maintaining these facilities, and providing amenities incentivizing their use; and planning for and building local bicycle projects that connect with the regional network.
- Improving transit access to rail and bus routes by incentives for construction and transit facilities within developments, and/or providing dedicated shuttle service to transit stations.

[9] "Certified Final Program Environmental Impact Report for Connect SoCal 2024." SCAG, May 2020, *available at:* https://scag.ca.gov/program-environmental-impact-report-0.

- Adopt employer trip reduction measures to reduce employee trips such as vanpool and carpool programs, provide end-of-trip facilities, and telecommuting programs.
- Designate a percentage of parking spaces for ride-sharing vehicles or high-occupancy vehicles and provide adequate passenger loading and unloading for those vehicles.
- Require at least five percent of all vehicle parking spaces include electric vehicle charging stations, or at a minimum, require the appropriate infrastructure to facilitate sufficient electric charging for passenger vehicles and trucks to plug-in.
- Implement preferential parking permit program.
- Encourage telecommuting and alternative work schedules.
- Implement commute trip reduction marketing.
- Price workplace parking.

We want to emphasize that projects should prioritize the use of on-site renewable energy to reduce GHG emissions. In particular, the installation of solar photovoltaic (PV) energy systems is an effective strategy to reduce project-related emissions and is consistent with recommendations in CARB's 2022 Scoping Plan.[10]

CARB's 2022 Scoping Plan further recommends that new residential projects "[use] all-electric appliances without any natural gas connections and [do] not use propane or other fossil fuels for space heating, water heating, or indoor cooking" in order to reduce Project-related GHG emissions. [11]

Furthermore, CEQA Guidelines 15126.4 (c)(3) include "[o]ffsite measures, including offsets that are not otherwise required, to mitigate a project's emissions" as an option for GHG mitigation.[12] An example of this was in the case of the Oakland Sports and Mixed-Use Project, where off-site reduction measures in the neighboring communities were recommended.[13] We recommend consideration of local carbon offset programs to reduce the Project's GHG impacts as a measure of last result.

Provided above are several mitigation measures that would reduce Project-related GHG emissions. These measures offer a cost-effective, feasible way to incorporate lower-emitting design features into the proposed Project, which subsequently reduce emissions released during Project construction and operation.

---

[10] "2022 Scoping Plan For Achieving Carbon Neutrality" CARB, November 2022, *available at*: https://ww2.arb.ca.gov/sites/default/files/2022-11/2022-sp-appendix-d-local-actions.pdf, Appendix D, p. 26.
[11] "2022 Scoping Plan For Achieving Carbon Neutrality" CARB, November 2022, *available at*: https://ww2.arb.ca.gov/sites/default/files/2022-11/2022-sp-appendix-d-local-actions.pdf, Appendix D, p. 23, Table 3.

CEQA Guidelines, May 2024, *available at*: https://casetext.com/regulation/california-code-of-regulations/title-14-natural-resources/division-6-resources-agency/chapter-3-guidelines-for-implementation-of-the-california-environmental-quality-act/article-9-contents-of-environmental-impact-reports/section-151264-consideration-and-discussion-of-mitigation-measures-proposed-to-minimize-significant-effects.
[13] "Cal. Pub. Resources Code § 21168.6.7." 2023, *available at*: https://casetext.com/statute/california-codes/california-public-resources-code/division-13-environmental-quality/chapter-6-limitations/section-2116867-oakland-sports-and-mixed-use-project-conditions-for-approval-certification-of-project-for-streamlining.

An EIR should be prepared that includes all feasible mitigation measures, as well as an updated GHG analysis to ensure that the necessary mitigation measures are implemented to reduce emissions to the maximum extent feasible. The EIR should also demonstrate a commitment to the implementation of these measures prior to Project approval, to ensure that the Project's potentially significant emissions are reduced to the maximum extent possible.

Disclaimer

SWAPE has received limited documentation regarding this project. Additional information may become available in the future; thus, we retain the right to revise or amend this report when additional information becomes available. Our professional services have been performed using that degree of care and skill ordinarily exercised, under similar circumstances, by reputable environmental consultants practicing in this or similar localities at the time of service. No other warranty, expressed or implied, is made as to the scope of work, work methodologies and protocols, site conditions, analytical testing results, and findings presented. This report reflects efforts which were limited to information that was reasonably accessible at the time of the work, and may contain informational gaps, inconsistencies, or otherwise be incomplete due to the unavailability or uncertainty of information obtained or provided by third parties.

Sincerely,

Matt Hagemann, P.G., C.Hg.

Paul E. Rosenfeld, Ph.D.

Matthew F. Hagemann, P.G., C.Hg.

- **Geologic and Hydrogeologic Characterization, Investigation and Remediation Strategies**
- **Industrial Stormwater Compliance**
- **CEQA Review**
- **Expert Testimony**

Professional Certifications:
California Professional Geologist, P.G.
California Certified Hydrogeologist, C.Hg.

Education:
M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.
B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

Professional Experience:
30 years of experience in environmental policy, contaminant assessment and remediation, stormwater compliance, and CEQA review. Spent nine years with the U.S. EPA in the Resource Conservation Recovery Act (RCRA) and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where I identified emerging threats to groundwater. While with EPA, I served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. Led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) and directed efforts to improve hydrogeologic characterization and water quality monitoring. For the past 15 years, as a founding partner with SWAPE, I developed extensive client relationships and has managed complex projects that include consultations as an expert witness and a regulatory specialist, and managing projects ranging from industrial stormwater compliance to CEQA review of impacts from hazardous waste, air quality and greenhouse gas emissions.

Positions held include:

Government:
Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);

Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
Geologist, U.S. Forest Service (1986 – 1998).

Educational:
Geology Instructor, Golden West College, 2010 – 2104, 2017;
Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
Instructor, College of Marin, Department of Science (1990 – 1995).

Private Sector:
Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);
Executive Director, Orange Coast Watch (2001 – 2004);
Geologist, Dames & Moore (1984 – 1986).

Senior Regulatory and Litigation Support Analyst:

With SWAPE, responsibilities have included:

- Lead analyst and testifying expert, for both plaintiffs and defendants, in the review of over 300 environmental impact reports and negative declarations since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, greenhouse gas emissions, and geologic hazards.
- Recommending additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce exposure to hazards from toxins.
- Stormwater analysis, sampling and best management practice evaluation, for both government agencies and corporate clients, at more than 150 industrial facilities.
- Serving as expert witness for both plaintiffs and defendants in cases including contamination of groundwater, CERCLAcompliance in assessment and remediation, and industrial stormwater contamination.
- Technical assistance and litigation support for vapor intrusion concerns, for both government agencies and corporate clients.
- Lead analyst and testifying expert in the review of environmental issues in license applicationsfor large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.

With Komex H2O Science Inc., duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking

water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.
- Lead author for a multi-volume remedial investigation report for an operating school in LosAngeles that met strict Sate of California regulatory requirements.
- Development of strategic approaches for cleanup of contaminated sites in consultation withclients and regulators.

Hydrogeology:

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities included:

- Leading efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiating a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identifying emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. Used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. Prepared geologic reports, conducted hearings, and responded to public comments from residents who were very concerned about the impact of designation.
- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Served as a hydrogeologist with the RCRA Hazardous Waste program. Duties included:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliancewith Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S.EPA legal counsel.

- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexicoand advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation- wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

Policy:

Served as senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9. Activities included the following:

- Advising the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinkingwater supplies.
- Shaping EPA's national response to these threats by serving on workgroups and by contributingto guidance, including the Office of Research and Development publication, Oxygenates in Water: Critical Information and Research Needs.
- Improving the technical training of EPA's scientific and engineering staff.
- Earning an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific principles into the policy-making process.
- Establishing national protocol for the peer review of scientific documents.

Geology:

With the U.S. Forest Service, led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities included:

- Mapping geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinating research with community stakeholders who were concerned with natural resource protection.
- Characterizing the geology of an aquifer that serves as the sole source of drinking water for thecity of Medford, Oregon.

As a consultant with Dames and Moore, led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large RCRA hazardous waste site in eastern Oregon.

Duties included the following:

- Supervising year-long effort for soil and groundwater sampling.
- Conducting aquifer tests.
- Investigating active faults beneath sites proposed for hazardous waste disposal.

Teaching:

From 1990 to 1998, taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.
- Part time geology instructor at Golden West College in Huntington Beach, California from 2010 to 2014 and in 2017.

Summary of Testimony Experience Over Past Four Years

In Re New Jersey Department of Environmental Protection et al. vs. E.I. DuPont de Nemours and Company, in the United States District Court, District of New Jersey, Civil Action No. 1:19-cv-14766-RMB-JBC. Deposition in 2025. Representing Plaintiffs in matters regarding contamination of groundwater, wastewater, soil, and air with per- and poly-fluoroalkyl substances.

In Re Edmond Asher, et al., vs. RTX Corporation (f/k/a Raytheon Technologies Corporation, et al.) in the County of Huntington Superior Court, Indiana, Cause number 35D01-2006-CT-000338. Deposition in 2024. Representing Plaintiffs in matters regarding contamination of groundwater and soil vapor with trichlorethylene.

In Re Wright vs Consolidated Rail Corporation In the Circuit Court of Cook County, Illinois, Case No: 21L3966. Deposition in 2023, Representing Plaintiff in matters involving groundwater and drinking water contamination of perchloroethylene, trichlorethylene, 1,2-dichloroethane, and carbon tetrachloride.

In Re Behr Dayton Thermal Products LLC In the United States District Court for the Southern District of Ohio Western Division at Dayton, Case No: 08-cv-326. Deposition in 2022. Representing Plaintiff in matters regarding contamination of groundwater and indoor air with perchloroethylene and trichloethelene.

Orange County Water District vs. Sabic Innovative Plastics US, LLC, et al. In the Court of Appeal, Fourth District,

Division 1, California, Case No: D070553. Deposition in 2020. Representing Plaintiff in matters involving compliance with The Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA).
Los Angeles Waterkeeper vs. AAA Plating and Inspection, Inc. In the United States District Court for the Central District of California, Case No: No. CV 18-5916 PA (GJSx). Deposition in 2019. Expert witness representing Plaintiff in matters involving contaminated stormwater runoff at an industrial facility in Compton, California.

Californians for Alternatives to Toxics vs. Schneider Dock and Intermodal Facility. In the United States District Court for the Northern District of California, Case No: 3:17-cv-05287-JST. Deposition in 2019. Expert witness representing Plaintiff in matters involving contaminated stormwater runoff at an industrial facility in Eureka, California.

Bells et al. vs. The 3M Company et al. In the United States District Court for the District of Colorado, Case No: 1:16-CV-02531-RBJ. Deposition in 2018. Expert witness representing Plaintiff on matters regarding the general hydrogeological conditions present in an area impacted by per- and poly-fluoroalkyl substances.

Ungar vs. Foundation for Affordable Housing. In the Superior Court, State of California, Los Angeles County, Case No. BC628890 Deposition in 2017. Expert witness representing defendant on matters involving alleged drinking water contamination.

Invited Testimony, Reports, Papers and Presentations:

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Presentation to the Public Environmental Law Conference, Eugene, Oregon.

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Invited presentation to U.S.EPA Region 9, San Francisco, California.

Paul Rosenfeld, Ph.D.

Chemical Fate and Transport & Air Dispersion Modeling

Principal Environmental Chemist

Risk Assessment & Remediation Specialist

Education

Ph.D. Soil Chemistry, University of Washington, 1999. Dissertation on volatile organic compound filtration.

M.S. Environmental Science, U.C. Berkeley, 1995. Thesis on organic waste economics.

B.A. Environmental Studies, U.C. Santa Barbara, 1991. Focus on wastewater treatment.

Professional Experience

Dr. Rosenfeld has over 25 years of experience conducting environmental investigations and risk assessments for evaluating impacts to human health, property, and ecological receptors. His expertise focuses on the fate and transport of environmental contaminants, human health risk, exposure assessment, and ecological restoration. Dr. Rosenfeld has evaluated and modeled emissions from oil spills, landfills, boilers and incinerators, process stacks, storage tanks, confined animal feeding operations, industrial, military and agricultural sources, unconventional oil drilling operations, and locomotive and construction engines. His project experience ranges from monitoring and modeling of pollution sources to evaluating impacts of pollution on workers at industrial facilities and residents in surrounding communities. Dr. Rosenfeld has also successfully modeled exposure to contaminants distributed by water systems and via vapor intrusion.

Dr. Rosenfeld has investigated and designed remediation programs and risk assessments for contaminated sites containing lead, heavy metals, mold, bacteria, particulate matter, petroleum hydrocarbons, chlorinated solvents, pesticides, radioactive waste, dioxins and furans, semi- and volatile organic compounds, PCBs, PAHs, creosote, perchlorate, asbestos, per- and poly-fluoroalkyl substances (PFOA/PFOS), unusual polymers, fuel oxygenates (MTBE), among other pollutants. Dr. Rosenfeld also has experience evaluating greenhouse gas emissions from various projects and is an expert on the assessment of odors from industrial and agricultural sites, as well as the evaluation of odor nuisance impacts and technologies for abatement of odorous emissions. As a principal scientist at SWAPE, Dr. Rosenfeld directs air dispersion modeling and exposure assessments. He has served as an expert witness and testified about pollution sources causing nuisance and/or personal injury at sites and has testified as an expert witness on numerous cases involving exposure to soil, water and air contaminants from industrial, railroad, agricultural, and military sources.

Professional History:

Soil Water Air Protection Enterprise (SWAPE); 2003 to present; Principal and Founding Partner
UCLA School of Public Health; 2007 to 2011; Lecturer (Assistant Researcher)
UCLA School of Public Health; 2003 to 2006; Adjunct Professor
UCLA Environmental Science and Engineering Program; 2002-2004; Doctoral Intern Coordinator
UCLA Institute of the Environment, 2001-2002; Research Associate
Komex H_2O Science, 2001 to 2003; Senior Remediation Scientist
National Groundwater Association, 2002-2004; Lecturer
San Diego State University, 1999-2001; Adjunct Professor
Anteon Corp., San Diego, 2000-2001; Remediation Project Manager
Ogden (now Amec), San Diego, 2000-2000; Remediation Project Manager
Bechtel, San Diego, California, 1999 – 2000; Risk Assessor
King County, Seattle, 1996 – 1999; Scientist
James River Corp., Washington, 1995-96; Scientist
Big Creek Lumber, Davenport, California, 1995; Scientist
Plumas Corp., California and USFS, Tahoe 1993-1995; Scientist
Peace Corps and World Wildlife Fund, St. Kitts, West Indies, 1991-1993; Scientist

Presentations:

Rosenfeld, P.E., "The science for Perfluorinated Chemicals (PFAS): What makes remediation so hard?" Law Seminars International, (May 9-10, 2018) 800 Fifth Avenue, Suite 101 Seattle, WA.

Rosenfeld, P.E., Sutherland, A; Hesse, R.; Zapata, A. (October 3-6, 2013). Air dispersion modeling of volatile organic emissions from multiple natural gas wells in Decatur, TX. *44th Western Regional Meeting, American Chemical Society.* Lecture conducted from Santa Clara, CA.

Sok, H.L.; Waller, C.C.; Feng, L.; Gonzalez, J.; Sutherland, A.J.; Wisdom-Stack, T.; Sahai, R.K.; Hesse, R.C.; **Rosenfeld, P.E.** (June 20-23, 2010). Atrazine: A Persistent Pesticide in Urban Drinking Water. *Urban Environmental Pollution*. Lecture conducted from Boston, MA.

Feng, L.; Gonzalez, J.; Sok, H.L.; Sutherland, A.J.; Waller, C.C.; Wisdom-Stack, T.; Sahai, R.K.; La, M.; Hesse, R.C.; **Rosenfeld, P.E.** (June 20-23, 2010). Bringing Environmental Justice to East St. Louis, Illinois. *Urban Environmental Pollution.* Lecture conducted from Boston, MA.

Rosenfeld, P.E. (April 19-23, 2009). Perfluoroctanoic Acid (PFOA) and Perfluoroactane Sulfonate (PFOS) Contamination in Drinking Water From the Use of Aqueous Film Forming Foams (AFFF) at Airports in the United States. *2009 Ground Water Summit and 2009 Ground Water Protection Council Spring Meeting*, Lecture conducted from Tuscon, AZ.

Rosenfeld, P.E. (April 19-23, 2009). Cost to Filter Atrazine Contamination from Drinking Water in the United States" Contamination in Drinking Water From the Use of Aqueous Film Forming Foams (AFFF) at Airports in the United States. *2009 Ground Water Summit and 2009 Ground Water Protection Council Spring Meeting*. Lecture conducted from Tuscon, AZ.

Wu, C., Tam, L., Clark, J., **Rosenfeld, P**. (20-22 July (2009). Dioxin and furan blood lipid concentrations in populations living near four wood treatment facilities in the United States. Brebbia, C.A. and Popov, V., eds., *Air Pollution XVII: Proceedings of the Seventeenth International Conference on Modeling, Monitoring and Management of Air Pollution*. Lecture conducted from Tallinn, Estonia.

Rosenfeld, P. E. (October 15-18, 2007). Moss Point Community Exposure To Contaminants From A Releasing Facility. *The 23rd Annual International Conferences on Soils Sediment and Water.* Platform lecture conducted at University of Massachusetts, Amherst MA.

Rosenfeld, P. E. (October 15-18, 2007). The Repeated Trespass of Tritium-Contaminated Water Into A Surrounding Community Form Repeated Waste Spills From A Nuclear Power Plant. *The 23rd Annual International Conferences on Soils Sediment and Water*. Platform lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld, P. E. (October 15-18, 2007). Somerville Community Exposure To Contaminants From Wood Treatment Facility Emissions. The *23rd Annual International Conferences on Soils Sediment and Water*. Lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld P. E. (March 2007). Production, Chemical Properties, Toxicology, & Treatment Case Studies of 1,2,3-Trichloropropane (TCP). *The Association for Environmental Health and Sciences (AEHS) Annual Meeting*. Lecture conducted from San Diego, CA.

Rosenfeld P. E. (March 2007). Blood and Attic Sampling for Dioxin/Furan, PAH, and Metal Exposure in Florala, Alabama. *The AEHS Annual Meeting.* Lecture conducted from San Diego, CA.

Hensley A.R., Scott, A., **Rosenfeld P.E.,** Clark, J.J.J. (August 21 – 25, 2006). Dioxin Containing Attic Dust And Human Blood Samples Collected Near A Former Wood Treatment Facility. *The 26th International Symposium on Halogenated Persistent Organic Pollutants – DIOXIN2006*. Lecture conducted from Radisson SAS Scandinavia Hotel in Oslo Norway.

Hensley A.R., Scott, A., **Rosenfeld P.E.,** Clark, J.J.J. (November 4-8, 2006). Dioxin Containing Attic Dust And Human Blood Samples Collected Near A Former Wood Treatment Facility. *APHA 134 Annual Meeting & Exposition.* Lecture conducted from Boston Massachusetts.

Paul Rosenfeld Ph.D. (October 24-25, 2005). Fate, Transport and Persistence of PFOA and Related Chemicals. Mealey's C8/PFOA. *Science, Risk & Litigation Conference.* Lecture conducted from The Rittenhouse Hotel, Philadelphia, PA.

Paul Rosenfeld Ph.D. (September 19, 2005). Brominated Flame Retardants in Groundwater: Pathways to Human Ingestion, *Toxicology and Remediation PEMA Emerging Contaminant Conference*. Lecture conducted from Hilton Hotel, Irvine California.

Paul Rosenfeld Ph.D. (September 19, 2005). Fate, Transport, Toxicity, And Persistence of 1,2,3-TCP. *PEMA Emerging Contaminant Conference.* Lecture conducted from Hilton Hotel in Irvine, California.

Paul Rosenfeld Ph.D. (September 26-27, 2005). Fate, Transport and Persistence of PDBEs. *Mealey's Groundwater Conference.* Lecture conducted from Ritz Carlton Hotel, Marina Del Ray, California.

Paul Rosenfeld Ph.D. (June 7-8, 2005). Fate, Transport and Persistence of PFOA and Related Chemicals. *International Society of Environmental Forensics: Focus on Emerging Contaminants*. Lecture conducted from Sheraton Oceanfront Hotel, Virginia Beach, Virginia.

Paul Rosenfeld Ph.D. (July 21-22, 2005). Fate Transport, Persistence and Toxicology of PFOA and Related Perfluorochemicals. *2005 National Groundwater Association Ground Water and Environmental Law Conference*. Lecture conducted from Wyndham Baltimore Inner Harbor, Baltimore Maryland.

Paul Rosenfeld Ph.D. (July 21-22, 2005). Brominated Flame Retardants in Groundwater: Pathways to Human Ingestion, Toxicology and Remediation. *2005 National Groundwater Association Ground Water and Environmental Law Conference.* Lecture conducted from Wyndham Baltimore Inner Harbor, Baltimore Maryland.

Paul Rosenfeld, Ph.D. and James Clark Ph.D. and Rob Hesse R.G. (May 5-6, 2004). Tert-butyl Alcohol Liability and Toxicology, A National Problem and Unquantified Liability. *National Groundwater Association. Environmental Law Conference*. Lecture conducted from Congress Plaza Hotel, Chicago Illinois.

Paul Rosenfeld, Ph.D. (March 2004). Perchlorate Toxicology. *Meeting of the American Groundwater Trust*. Lecture conducted from Phoenix Arizona.

Hagemann, M.F., **Paul Rosenfeld, Ph.D.** and Rob Hesse (2004). Perchlorate Contamination of the Colorado River. *Meeting of tribal representatives*. Lecture conducted from Parker, AZ.

Paul Rosenfeld, Ph.D. (April 7, 2004). A National Damage Assessment Model for PCE and Dry Cleaners. *Drycleaner Symposium. California Ground Water Association*. Lecture conducted from Radison Hotel, Sacramento, California.

Rosenfeld, P. E., Grey, M., (June 2003) Two stage biofilter for biosolids composting odor control. *Seventh International In Situ And On Site Bioremediation Symposium Battelle Conference* Orlando, FL.

Paul Rosenfeld, Ph.D. and James Clark Ph.D. (February 20-21, 2003) Understanding Historical Use, Chemical Properties, Toxicity and Regulatory Guidance of 1,4 Dioxane. *National Groundwater Association. Southwest Focus Conference. Water Supply and Emerging Contaminants*. Lecture conducted from Hyatt Regency Phoenix Arizona.

Paul Rosenfeld, Ph.D. (February 6-7, 2003). Underground Storage Tank Litigation and Remediation. *California CUPA Forum*. Lecture conducted from Marriott Hotel, Anaheim California.

Paul Rosenfeld, Ph.D. (October 23, 2002) Underground Storage Tank Litigation and Remediation. *EPA Underground Storage Tank Roundtable*. Lecture conducted from Sacramento California.

Rosenfeld, P.E. and Suffet, M. (October 7- 10, 2002). Understanding Odor from Compost, *Wastewater and Industrial Processes. Sixth Annual Symposium on Off Flavors in the Aquatic Environment. International Water Association*. Lecture conducted from Barcelona Spain.

Rosenfeld, P.E. and Suffet, M. (October 7- 10, 2002). Using High Carbon Wood Ash to Control Compost Odor. *Sixth Annual Symposium on Off Flavors in the Aquatic Environment. International Water Association*. Lecture conducted from Barcelona Spain.

Rosenfeld, P.E. and Grey, M. A. (September 22-24, 2002). Biocycle Composting for Coastal Sage Restoration. *Northwest Biosolids Management Association*. Lecture conducted from Vancouver Washington.

Rosenfeld, P.E. and Grey, M. A. (November 11-14, 2002). Using High-Carbon Wood Ash to Control Odor at a Green Materials Composting Facility. *Soil Science Society Annual Conferenc*e. Lecture conducted from Indianapolis, Maryland.

Rosenfeld. P.E. (September 16, 2000). Two stage biofilter for biosolids composting odor control. *Water Environment Federation.* Lecture conducted from Anaheim California.

Rosenfeld. P.E. (October 16, 2000). Wood ash and biofilter control of compost odor. *Biofest.* Lecture conducted from Ocean Shores, California.

Rosenfeld, P.E. (2000). Bioremediation Using Organic Soil Amendments. *California Resource Recovery Association*. Lecture conducted from Sacramento California.

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation with High-Carbon Wood-Ash. *Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings*. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., and C.L. Henry. (1999). An evaluation of ash incorporation with biosolids for odor reduction. *Soil Science Society of America*. Lecture conducted from Salt Lake City Utah.

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Comparison of Microbial Activity and Odor Emissions from Three Different Biosolids Applied to Forest Soil. *Brown and Caldwell.* Lecture conducted from Seattle Washington.

Rosenfeld, P.E., C.L. Henry. (1998). Characterization, Quantification, and Control of Odor Emissions from Biosolids Application To Forest Soil. *Biofest.* Lecture conducted from Lake Chelan, Washington.

Rosenfeld, P.E, C.L. Henry, R. Harrison. (1998). Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation with High-Carbon Wood-Ash. Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., C.L. Henry, R. B. Harrison, and R. Dills. (1997). Comparison of Odor Emissions from Three Different Biosolids Applied to Forest Soil. *Soil Science Society of America*. Lecture conducted from Anaheim California.

Teaching Experience:

UCLA Department of Environmental Health (Summer 2003 through 20010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. The course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

Academic Grants Awarded:

California Integrated Waste Management Board. $41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate the effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: $10,000 grant awarded to San Diego State University.
Goal: investigate the effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. $100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. $20,000 grant awarded to investigate the effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: $10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: $15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. $500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

Deposition and/or Trial Testimony:

In the District Court of Harris County Texas
Mt Davis Interest, Inc v Sesco Cement Corp
Cause No 2023-26512
Trial 6-6-2-25

In the United States Southern District of New York
Gallo vs Avon Products Inc., et al
Civil Action No.: 1:23-cv-2023
Deposition 4-24-2025

In Vanderburgh Superior Court 5, County of Vanderburgh, Indiana
Markello v CSX
Civil Action No 82D05-2011-CT-004962
Deposition 3-26-25

Iin the Circuit Court of Cook County Illinois
Jarosiewicz v Northeast Regional Railroad
Case No 2023 L 002290
Deposition 2-27-25

In the District Court 191st Judicial District Dallas County
Acklin v Poly America International
Cause No DC-22-08610
Deposition 1-8-2025

United States District Court, Norther District of California
Asustin Vs Monsanto
Case No 2:23-cv-272
Deposition 12-20-25

In Jefferson Circuit Court Division One, Louisville, Kentucky
Stafford vs, CSX
Case No. 18-CI-001790

Deposition: 8-27-24

In the Twenty-Second Judicial Circuit of St. Louis. State of Missouri
Patricia Godfrey vs, Amtrak
Case No. 2122-CC-00525
Deposition: 7-17-24

In the Circuit Court of Jefferson County Alabama
Linda Early Vs. CSX
Case number CV-2021-00241
Deposition 6-24-24

In the Court of Common Please Lucas County, Ohio
Brenda Conkright vs. CSX
Case No. G-4801-CI-0202102664-000
Deposition: 6-4-24

In the Commonwealth of Kentucky, Greenup Circuit Court
Patsy Sue Napier vs. CSX
Case No. 19-CI-0012
Deposition: 5-8-2-24

In United States District Court of Hawaii
Patrick Feindt, Jr. et al. vs. The United States of America
Case No. 1:22-cv-LEK-KJM
Trial 3-29-24 and 4-5-24

In the District Court of Hood County State of Texas
Artie Gray vs. Exxon Mobil
Case No. C-2018047
Rosenfeld Deposition:4-22-2024

In the Elkhart Superior Court State of Indiana
Estate of Clark Stacy vs. Penn Central Corporation
Cause No 2D01-2001-CT-00007
Rosenfeld Deposition 1-25-2024 and 3-7-2024

In the Circuit Court of Trempealeau County, State of Wisconsin
Michael J. Sylla et al. vs. High-Crush Whitehall LLC
Case No. 2019-CV-63, 2019-CV-64, 2019-CV-65, 2019-CV-66
Rosenfeld Deposition: 3-5-2024

In the Circuit Court of Trempealeau County, State of Wisconsin
Leland Drangstveit vs. High-Crush Blair LLC
Case No. 19-CV-66
Rosenfeld Deposition 3-5-2024

In the Circuit Court of Jefferson County Alabama
Donald Lee Ashworth vs. CSX Transportation Inc.
Case No CV-2021-901261
Rosenfeld Deposition 1-23-2024

In the United States District Court for the Eastern District of Wisconsin
Gary L Siepe vs. Soo Line Railroad
Case No. 2:21-cv-00919
Rosenfeld Deposition 1-19-2024

In the United States District Court for the Western District of Louisiana
Ricky Bush v. Clean Harbors Colfax LLC
Case No. 1:22-cv-02026-DDD-JPM
Rosenfeld Deposition 12-18-2023 and 1-15-2024

In United States District Court of Hawaii
Patrick Feindt, Jr. et al. vs. The United States of America
Case No. 1:22-cv-LEK-KJM
Rosenfeld Deposition 11-29-2023

In the Circuit Court for the Twentieth Judicial Circuit St. Clair County, Illinois
Timothy Gray vs. Rural King et al.
Case No 2022-LA-355
Rosenfeld Deposition 9-26-2023

In United States District Court Eastern District of Wisconsin
Gary L. Siepe vs. Soo Line Railroad Company
Case No. 2:21-cv-00919
Rosenfeld Deposition 9-15-2023

In the Circuit Court of Cook County Illinois
Donald Fox vs. BNSF
Case No. 2021 L12
Rosenfeld Deposition 9-12-2023

In the Court of Common Please Cuyahoga County, Ohio
Thomas Schleich vs. Penn Central Corporation
Lead Case No. CV-20-939184
Rosenfeld Deposition 8-27-2023

In the Circuit Court of Jackson County Missouri at Kansas City
Timothy Dalsing vs. BNSF
Case No. No. 2216-cv06539
Rosenfeld Deposition 7-28-2023

In the United States District Court for the Southern District of Texas Houston Division
International Terminals Company LLC Deer Park Fire Litigation
Lead Case No. 4:19-cv-01460
Rosenfeld Deposition 7-25-2023

In the Circuit Court of Livingston County Missouri
Shirley Ralls vs. Canadian Pacific Railway and Soo Lind Railroad
Case No. 28LV-CV0020
Rosenfeld Daubert Hearing 7-18-2023 Trial Testimony 7-19-2023

In the Circuit Court of Cook County Illinois
Brenda Wright vs. Penn Central and Conrail
Case No. No. 2032L003966
Rosenfeld Deposition 6-13-2023

In the Circuit Court Common Please Philadelphia of Jefferson County Alabama
Frank Belle vs. Birmingham Southern Railroad Company et al.
Case No. 01-cv-2021-900901.00
Rosenfeld Deposition 4-6-2023

In the Circuit Court of Jefferson County Alabama
Linda De Gregorio vs. Penn Central
Case No. 002278
Rosenfeld Deposition 3-27-20203

In the United States District Court Eastern District of New York
Rosalie Romano et al. vs. Northrup Grumman Corporation
Case No. 16-cv-5760
Rosenfeld Deposition 3-16-2023

In the Superior Court of Washington, Spokane County
Judy Cundy vs. BNSF
Case No. 21-2-03718-32
Rosenfeld Deposition 3-9-2023

In The Court of Common Pleas of Philadelphia County, PA Civil Trial Division
Feaster v Conrail
Case No. 001075
Rosenfeld Deposition 2-1-2023

In United States District Court for the Central District of Illinois
Sherman vs. BNSF
Case No. 3:17-cv-01192
Rosenfeld Deposition 1-18-2023

In United States District Court District of Colorado
Gonzales vs. BNSF
Case No. 1:21-cv-01690
Rosenfeld Deposition 1-17-2023

In United States District Court District of Colorado
Abeyta vs. BNSF
Case No. 1:21-cv-01689-KMT
Rosenfeld Deposition 1-3-2023

In United States District Court For The Easter District of Louisiana
Nathaniel Smith vs. Illinois Central Railroad
Case No. 2:21-cv-01235
Rosenfeld Deposition 11-30-2022

In the Superior Court of the State of California, County of San Bernardino
Billy Wildrick, Plaintiff vs. BNSF Railway Company
Case No. CIVDS1711810
Rosenfeld Deposition 10-17-2022

In the State Court of Bibb County, State of Georgia
Richard Hutcherson, Plaintiff vs Norfolk Southern Railway Company
Case No. 10-SCCV-092007
Rosenfeld Deposition 10-6-2022

In the Civil District Court of the Parish of Orleans, State of Louisiana
Millard Clark, Plaintiff vs. Dixie Carriers, Inc. et al.
Case No. 2020-03891
Rosenfeld Deposition 9-15-2022

In The Circuit Court of Livingston County, State of Missouri, Circuit Civil Division

Shirley Ralls, Plaintiff vs. Canadian Pacific Railway and Soo Line Railroad
Case No. 18-LV-CC0020
Rosenfeld Deposition 9-7-2022

In The Circuit Court of the 13th Judicial Circuit Court, Hillsborough County, Florida Civil Division
Jonny C. Daniels, Plaintiff vs. CSX Transportation Inc.
Case No. 20-CA-5502
Rosenfeld Deposition 9-1-2022

In The Circuit Court of St. Louis County, State of Missouri
Kieth Luke et. al. Plaintiff vs. Monsanto Company et. al.
Case No. 19SL-CC03191
Rosenfeld Deposition 8-25-2022

In The Circuit Court of the 13th Judicial Circuit Court, Hillsborough County, Florida Civil Division
Jeffery S. Lamotte, Plaintiff vs. CSX Transportation Inc.
Case No. NO. 20-CA-0049
Rosenfeld Deposition 8-22-2022

In State of Minnesota District Court, County of St. Louis Sixth Judicial District

Subject: Indoor Air Quality: Chacon Farms Project, San Jacinto, CA.
(IEE File Reference: P-4946)

Pages: 19

Indoor Air Quality Impacts

Indoor air quality (IAQ) directly impacts the comfort and health of building occupants, and the achievement of acceptable IAQ in newly constructed and renovated buildings is a well-recognized design objective. For example, IAQ is addressed by major high-performance building rating systems and building codes (California Building Standards Commission, 2014; USGBC, 2014). Indoor air quality in homes is particularly important because occupants, on average, spend approximately ninety percent of their time indoors with the majority of this time spent at home (EPA, 2011). Some segments of the population that are most susceptible to the effects of poor IAQ, such as the very young and the elderly, occupy their homes almost continuously. Additionally, an increasing number of adults are working from home at least some of the time during the workweek. Indoor air quality also is a serious concern for workers in hotels, offices and other business establishments.

The concentrations of many air pollutants often are elevated in homes and other buildings relative to outdoor air because many of the materials and products used indoors contain and release a variety of pollutants to air (Hodgson et al., 2002; Offermann and Hodgson,

2011). With respect to indoor air contaminants for which inhalation is the primary route of exposure, the critical design and construction parameters are the provision of adequate ventilation and the reduction of indoor sources of the contaminants.

Indoor Formaldehyde Concentrations Impact. In the California New Home Study (CNHS) of 108 new homes in California (Offermann, 2009), 25 air contaminants were measured, and formaldehyde was identified as the indoor air contaminant with the highest cancer risk as determined by the California Proposition 65 Safe Harbor Levels (OEHHA, 2017a), No Significant Risk Levels (NSRL) for carcinogens. The NSRL is the daily intake level calculated to result in one excess case of cancer in an exposed population of 100,000 (i.e., ten in one million cancer risk) and for formaldehyde is 40 µg/day. The NSRL concentration of formaldehyde that represents a daily dose of 40 µg is 2 µg/m^3, assuming a continuous 24-hour exposure, a total daily inhaled air volume of 20 m^3, and 100% absorption by the respiratory system. All of the CNHS homes exceeded this NSRL concentration of 2 µg/m^3. The median indoor formaldehyde concentration was 36 µg/m^3, and ranged from 4.8 to 136 µg/m^3, which corresponds to a median exceedance of the 2 µg/m^3 NSRL concentration of 18 and a range of 2.3 to 68.

Therefore, the cancer risk of a resident living in a California home with the median indoor formaldehyde concentration of 36 µg/m^3, is 180 per million as a result of formaldehyde alone. The CEQA significance threshold for airborne cancer risk is 10 per million, as established by the San Diego County Air Pollution Control District (SDAPCD, 2021).

Besides being a human carcinogen, formaldehyde is also a potent eye and respiratory irritant. In the CNHS, many homes exceeded the non-cancer reference exposure levels (RELs) prescribed by California Office of Environmental Health Hazard Assessment (OEHHA, 2017b). The percentage of homes exceeding the RELs ranged from 98% for the Chronic REL of 9 µg/m^3 to 28% for the Acute REL of 55 µg/m^3.

The primary source of formaldehyde indoors is composite wood products manufactured with urea-formaldehyde resins, such as plywood, medium density fiberboard, and particleboard. These materials are commonly used in building construction for flooring, cabinetry, baseboards, window shades, interior doors, and window and door trims.

In January 2009, the California Air Resources Board (CARB) adopted an airborne toxics control measure (ATCM) to reduce formaldehyde emissions from composite wood products, including hardwood plywood, particleboard, medium density fiberboard, and also furniture and other finished products made with these wood products (California Air Resources Board 2009). While this formaldehyde ATCM has resulted in reduced emissions from composite wood products sold in California, they do not preclude that homes built with composite wood products meeting the CARB ATCM will have indoor formaldehyde concentrations below cancer and non-cancer exposure guidelines.

A follow up study to the California New Home Study (CNHS) was conducted in 2016-2018 (Singer et. al., 2019) and found that the median indoor formaldehyde in new homes built after 2009 with CARB Phase 2 Formaldehyde ATCM materials had lower indoor formaldehyde concentrations, with a median indoor concentrations of 22.4 $\mu g/m^3$ (18.2 ppb) as compared to a median of 36 $\mu g/m^3$ found in the 2007 CNHS. Unlike in the CNHS study where formaldehyde concentrations were measured with pumped DNPH samplers, the formaldehyde concentrations in the HENGH study were measured with passive samplers, which were estimated to under-measure the true indoor formaldehyde concentrations by approximately 7.5%. Applying this correction to the HENGH indoor formaldehyde concentrations results in a median indoor concentration of 24.1 $\mu g/m^3$, which is 33% lower than the 36 $\mu g/m^3$ found in the 2007 CNHS.

Thus, while new homes built after the 2009 CARB formaldehyde ATCM have a 33% lower median indoor formaldehyde concentration and cancer risk, the median lifetime cancer risk is still 120 per million for homes built with CARB compliant composite wood products. This median lifetime cancer risk is more than 12 times the OEHHA 10 in a million cancer risk threshold (OEHHA, 2017a).

With respect to the Chacon Farms Project, San Jacinto, CA, the buildings consist of residential buildings spaces.

The residential occupants will potentially have continuous exposure (e.g. 24 hours per day, 52 weeks per year). These exposures are anticipated to result in significant cancer risks

resulting from exposures to formaldehyde released by the building materials and furnishing commonly found in residential construction.

Because these residences will be constructed with CARB Phase 2 Formaldehyde ATCM materials and be ventilated with the minimum code required amount of outdoor air, the indoor residential formaldehyde concentrations are likely similar to those concentrations observed in residences built with CARB Phase 2 Formaldehyde ATCM materials, which is a median of 24.1 $\mu g/m^3$ (Singer et. al., 2020)

Assuming that the residential occupants inhale 20 m^3 of air per day, the average 70-year lifetime formaldehyde daily dose is 482 µg/day for continuous exposure in the residences. This exposure represents a cancer risk of 120 per million, which is more than 12 times the CEQA cancer risk of 10 per million. For occupants that do not have continuous exposure, the cancer risk will be proportionally less but still substantially over the CEQA cancer risk of 10 per million (e.g. for 12/hour/day occupancy, more than 6 times the CEQA cancer risk of 10 per million).

In addition, we note that the average outdoor air concentration of formaldehyde in California is 3 ppb, or 3.7 $\mu g/m^3$, (California Air Resources Board, 2004), and thus represents an average pre-existing background airborne cancer risk of 1.85 per million. Thus, the indoor air formaldehyde exposures describe above exacerbate this pre-existing risk resulting from outdoor air formaldehyde exposures.

Additionally, the SCAQMD's Multiple Air Toxics Exposure Study ("MATES V") identifies an existing cancer risk at the Project site of 219 per million due to the site's elevated ambient air contaminant concentrations, which are due to the area's high levels of vehicle traffic. These impacts would further exacerbate the pre-existing cancer risk to the building occupants, which result from exposure to formaldehyde in both indoor and outdoor air.

Appendix A, Indoor Formaldehyde Concentrations and the CARB Formaldehyde ATCM, provides analyses that show utilization of CARB Phase 2 Formaldehyde ATCM materials

will not ensure acceptable cancer risks with respect to formaldehyde emissions from composite wood products.

Even composite wood products manufactured with CARB certified ultra-low emitting formaldehyde (ULEF) resins do not ensure that the indoor air will have concentrations of formaldehyde the meet the OEHHA cancer risks that substantially exceed 10 per million. The permissible emission rates for ULEF composite wood products are only 11-15% lower than the CARB Phase 2 emission rates. Only use of composite wood products made with no-added formaldehyde resins (NAF), such as resins made from soy, polyvinyl acetate, or methylene diisocyanate can ensure that the OEHHA cancer risk of 10 per million is met.

The following describes a method that should be used, prior to construction in the environmental review under CEQA, for determining whether the indoor concentrations resulting from the formaldehyde emissions of specific building materials/furnishings selected exceed cancer and non-cancer guidelines. Such a design analyses can be used to identify those materials/furnishings prior to the completion of the City's CEQA review and project approval, that have formaldehyde emission rates that contribute to indoor concentrations that exceed cancer and non-cancer guidelines, so that alternative lower emitting materials/furnishings may be selected and/or higher minimum outdoor air ventilation rates can be increased to achieve acceptable indoor concentrations and incorporated as mitigation measures for this project.

Pre-Construction Building Material/Furnishing Formaldehyde Emissions Assessment

This formaldehyde emissions assessment should be used in the environmental review under CEQA to assess the indoor formaldehyde concentrations from the proposed loading of building materials/furnishings, the area-specific formaldehyde emission rate data for building materials/furnishings, and the design minimum outdoor air ventilation rates. This assessment allows the applicant (and the City) to determine, before the conclusion of the environmental review process and the building materials/furnishings are specified, purchased, and installed, if the total chemical emissions will exceed cancer and non-cancer guidelines, and if so, allow for changes in the selection of specific material/furnishings

and/or the design minimum outdoor air ventilations rates such that cancer and non-cancer guidelines are not exceeded.

1.) Define Indoor Air Quality Zones. Divide the building into separate indoor air quality zones, (IAQ Zones). IAQ Zones are defined as areas of well-mixed air. Thus, each ventilation system with recirculating air is considered a single zone, and each room or group of rooms where air is not recirculated (e.g. 100% outdoor air) is considered a separate zone. For IAQ Zones with the same construction material/furnishings and design minimum outdoor air ventilation rates. (e.g. hotel rooms, apartments, condominiums, etc.) the formaldehyde emission rates need only be assessed for a single IAQ Zone of that type.

2.) Calculate Material/Furnishing Loading. For each IAQ Zone, determine the building material and furnishing loadings (e.g., m^2 of material/m^2 floor area, units of furnishings/m^2 floor area) from an inventory of all potential indoor formaldehyde sources, including flooring, ceiling tiles, furnishings, finishes, insulation, sealants, adhesives, and any products constructed with composite wood products containing urea-formaldehyde resins (e.g., plywood, medium density fiberboard, particleboard).

3.) Calculate the Formaldehyde Emission Rate. For each building material, calculate the formaldehyde emission rate (µg/h) from the product of the area-specific formaldehyde emission rate (µg/m^2-h) and the area (m^2) of material in the IAQ Zone, and from each furnishing (e.g. chairs, desks, etc.) from the unit-specific formaldehyde emission rate (µg/unit-h) and the number of units in the IAQ Zone.

NOTE: As a result of the high-performance building rating systems and building codes (California Building Standards Commission, 2014; USGBC, 2014), most manufacturers of building materials furnishings sold in the United States conduct chemical emission rate tests using the California Department of Health "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions for Indoor Sources Using Environmental Chambers," (CDPH, 2017), or other equivalent chemical emission rate testing methods. Most manufacturers of building furnishings sold in the United States conduct chemical emission rate tests using ANSI/BIFMA M7.1 Standard Test Method for Determining VOC Emissions (BIFMA, 2018), or other equivalent chemical emission rate

testing methods.

CDPH, BIFMA, and other chemical emission rate testing programs, typically certify that a material or furnishing does not create indoor chemical concentrations in excess of the maximum concentrations permitted by their certification. For instance, the CDPH emission rate testing requires that the measured emission rates when input into an office, school, or residential model do not exceed one-half of the OEHHA Chronic Exposure Guidelines (OEHHA, 2017b) for the 35 specific VOCs, including formaldehyde, listed in Table 4-1 of the CDPH test method (CDPH, 2017). These certifications themselves do not provide the actual area-specific formaldehyde emission rate (i.e., $\mu g/m^2$-h) of the product, but rather provide data that the formaldehyde emission rates do not exceed the maximum rate allowed for the certification. Thus, for example, the data for a certification of a specific type of flooring may be used to calculate that the area-specific emission rate of formaldehyde is less than 31 $\mu g/m^2$-h, but not the actual measured specific emission rate, which may be 3, 18, or 30 $\mu g/m^2$-h. These area-specific emission rates determined from the product certifications of CDPH, BIFA, and other certification programs can be used as an initial estimate of the formaldehyde emission rate.

If the actual area-specific emission rates of a building material or furnishing is needed (i.e. the initial emission rates estimates from the product certifications are higher than desired), then that data can be acquired by requesting from the manufacturer the complete chemical emission rate test report. For instance if the complete CDPH emission test report is requested for a CDHP certified product, that report will provide the actual area-specific emission rates for not only the 35 specific VOCs, including formaldehyde, listed in Table 4-1 of the CDPH test method (CDPH, 2017), but also all of the cancer and reproductive/developmental chemicals listed in the California Proposition 65 Safe Harbor Levels (OEHHA, 2017a), all of the toxic air contaminants (TACs) in the California Air Resources Board Toxic Air Contamination List (CARB, 2011), and the 10 chemicals with the greatest emission rates.

Alternatively, a sample of the building material or furnishing can be submitted to a chemical emission rate testing laboratory, such as Berkeley Analytical Laboratory (https://berkeleyanalytical.com), to measure the formaldehyde emission rate.

4.) Calculate the Total Formaldehyde Emission Rate. For each IAQ Zone, calculate the total formaldehyde emission rate (i.e. µg/h) from the individual formaldehyde emission rates from each of the building material/furnishings as determined in Step 3.

5.) Calculate the Indoor Formaldehyde Concentration. For each IAQ Zone, calculate the indoor formaldehyde concentration (µg/m^3) from Equation 1 by dividing the total formaldehyde emission rates (i.e. µg/h) as determined in Step 4, by the design minimum outdoor air ventilation rate (m^3/h) for the IAQ Zone.

$$C_{in} = \frac{E_{total}}{Q_{oa}} \quad \text{(Equation 1)}$$

where:

C_{in} = indoor formaldehyde concentration (µg/m^3)

E_{total} = total formaldehyde emission rate (µg/h) into the IAQ Zone.

Q_{oa} = design minimum outdoor air ventilation rate to the IAQ Zone (m^3/h)

The above Equation 1 is based upon mass balance theory, and is referenced in Section 3.10.2 "Calculation of Estimated Building Concentrations" of the California Department of Health "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions for Indoor Sources Using Environmental Chambers", (CDPH, 2017).

6.) Calculate the Indoor Exposure Cancer and Non-Cancer Health Risks. For each IAQ Zone, calculate the cancer and non-cancer health risks from the indoor formaldehyde concentrations determined in Step 5 and as described in the OEHHA Air Toxics Hot Spots Program Risk Assessment Guidelines; Guidance Manual for Preparation of Health Risk Assessments (OEHHA, 2015).

7.) Mitigate Indoor Formaldehyde Exposures of exceeding the CEQA Cancer and/or Non-Cancer Health Risks. In each IAQ Zone, provide mitigation for any formaldehyde exposure risk as determined in Step 6, that exceeds the CEQA cancer risk of 10 per million or the CEQA non-cancer Hazard Quotient of 1.0.

Provide the source and/or ventilation mitigation required in all IAQ Zones to reduce the health risks of the chemical exposures below the CEQA cancer and non-cancer health risks.

Source mitigation for formaldehyde may include:

1.) reducing the amount materials and/or furnishings that emit formaldehyde
2.) substituting a different material with a lower area-specific emission rate of formaldehyde

Ventilation mitigation for formaldehyde emitted from building materials and/or furnishings may include:

1.) increasing the design minimum outdoor air ventilation rate to the IAQ Zone.

NOTE: Mitigating the formaldehyde emissions through use of less material/furnishings, or use of lower emitting materials/furnishings, is the preferred mitigation option, as mitigation with increased outdoor air ventilation increases initial and operating costs associated with the heating/cooling systems.

Further, we are not asking that the builder "speculate" on what and how much composite materials be used, but rather at the design stage to select composite wood materials based on the formaldehyde emission rates that manufacturers routinely conduct using the California Department of Health "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions for Indoor Sources Using Environmental Chambers," (CDPH, 2017), and use the procedure described earlier above (i.e. Pre-Construction Building Material/Furnishing Formaldehyde Emissions Assessment) to insure that the materials selected achieve acceptable cancer risks from material off gassing of formaldehyde.

Outdoor Air Ventilation Impact. Another important finding of the CNHS, was that the outdoor air ventilation rates in the homes were very low. Outdoor air ventilation is a very important factor influencing the indoor concentrations of air contaminants, as it is the primary removal mechanism of all indoor air generated contaminants. Lower outdoor air exchange rates cause indoor generated air contaminants to accumulate to higher indoor air concentrations. Many homeowners rarely open their windows or doors for ventilation as a

result of their concerns for security/safety, noise, dust, and odor concerns (Price, 2007). In the CNHS field study, 32% of the homes did not use their windows during the 24-hour Test Day, and 15% of the homes did not use their windows during the entire preceding week. Most of the homes with no window usage were homes in the winter field session. Thus, a substantial percentage of homeowners never open their windows, especially in the winter season. The median 24-hour measurement was 0.26 air changes per hour (ach), with a range of 0.09 ach to 5.3 ach. A total of 67% of the homes had outdoor air exchange rates below the minimum California Building Code (2001) requirement of 0.35 ach. Thus, the relatively tight envelope construction, combined with the fact that many people never open their windows for ventilation, results in homes with low outdoor air exchange rates and higher indoor air contaminant concentrations.

The Chacon Farms Project, San Jacinto, CA is close to roads with moderate to high traffic (e.g., North Cawston Avenue, West Esplanade Avenue, 7th Street, etc.). Thus, the Project is located in a sound impacted area.

The Draft Environmental Impact Report – Chacon Farms Project, San Jacinto, CA (EPC Environmental, 2025) states in Table 31 that the modeled existing traffic noise levels with the Project range from 67.5 to 69.8 dBA CNEL without a wall and 61.1 to 64.9 dBA CNEL with a wall. These modeled ambient noise estimates were based upon measurements made at just two locations over 15-minute periods.

In order to design the building for this Project such that interior noise levels are acceptable, an acoustic study with actual on-site measurements of the existing ambient noise levels and modeled future ambient noise levels needs to be conducted. The acoustic study of the existing ambient noise levels should be conducted over a minimum of a one-week period and report the dBA CNEL or Ldn. This study will allow for the selection of a building envelope and windows with a sufficient STC such that the indoor noise levels are acceptable. A mechanical supply of outdoor air ventilation to allow for a habitable interior environment with closed windows and doors will also be required. Such a ventilation system would allow windows and doors to be kept closed at the occupant's discretion to control exterior noise within building interiors.

$PM_{2.5}$ Outdoor Concentrations Impact. An additional impact of the nearby motor vehicle traffic associated with this project, are the outdoor concentrations of $PM_{2.5}$. According to the Draft Environmental Impact Report – Chacon Farms Project, San Jacinto, CA (EPC Environmental, 2025), the Project is located in the South Coast Air Basin, which is a State and Federal non-attainment area for $PM_{2.5}$.

Additionally, the SCAQMD's MATES V study cites an existing cancer risk of 219 per million at the Project site due to the site's high concentration of ambient air contaminants resulting from the area's high levels of motor vehicle traffic.

An air quality analyses should be conducted to determine the concentrations of $PM_{2.5}$ in the outdoor and indoor air that people inhale each day. This air quality analyses needs to consider the cumulative impacts of the project related emissions, existing and projected future emissions from local $PM_{2.5}$ sources (e.g. stationary sources, motor vehicles, and airport traffic) upon the outdoor air concentrations at the Project site. If the outdoor concentrations are determined to exceed the California and National annual average $PM_{2.5}$ exceedence concentration of 12 $\mu g/m^3$, or the National 24-hour average exceedence concentration of 35 $\mu g/m^3$, then the buildings need to have a mechanical supply of outdoor air that has air filtration with sufficient removal efficiency, such that the indoor concentrations of outdoor $PM_{2.5}$ particles is less than the California and National $PM_{2.5}$ annual and 24-hour standards.

It is my experience that based on the projected high traffic noise levels, the annual average concentration of $PM_{2.5}$ will exceed the California and National $PM_{2.5}$ annual and 24-hour standards and warrant installation of high efficiency air filters (i.e. at least MERV 13, or possibly MERV 14 or 15 depending on the results of the Project ambient $PM_{2.5}$ concentrations) in all mechanically supplied outdoor air ventilation systems.

Indoor Air Quality Impact Mitigation Measures

The following are recommended mitigation measures to minimize the impacts upon indoor quality:

Indoor Formaldehyde Concentrations Mitigation. Use only composite wood materials (e.g. hardwood plywood, medium density fiberboard, particleboard) for all interior finish systems that are made with CARB approved no-added formaldehyde (NAF) resins (CARB, 2009). CARB Phase 2 certified composite wood products, or ultra-low emitting formaldehyde (ULEF) resins, do not ensure indoor formaldehyde concentrations that are below the CEQA cancer risk of 10 per million. Only composite wood products manufactured with CARB approved no-added formaldehyde (NAF) resins, such as resins made from soy, polyvinyl acetate, or methylene diisocyanate can ensure that the OEHHA cancer risk of 10 per million is met.

Alternatively, conduct the previously described Pre-Construction Building Material/Furnishing Chemical Emissions Assessment, to determine that the combination of formaldehyde emissions from building materials and furnishings do not create indoor formaldehyde concentrations that exceed the CEQA cancer and non-cancer health risks.

It is important to note that we are not asking that the builder "speculate" on what and how much composite materials be used, but rather at the design stage to select composite wood materials based on the formaldehyde emission rates that manufacturers routinely conduct using the California Department of Health "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions for Indoor Sources Using Environmental Chambers", (CDPH, 2017), and use the procedure described above (i.e. Pre-Construction Building Material/Furnishing Formaldehyde Emissions Assessment) to insure that the materials selected achieve acceptable cancer risks from material off gassing of formaldehyde.

Outdoor Air Ventilation Mitigation. Provide each habitable room with a continuous mechanical supply of outdoor air that meets or exceeds the California 2016 Building Energy Efficiency Standards (California Energy Commission, 2015) requirements of the greater of 15 cfm/occupant or 0.15 cfm/ft^2 of floor area. Following installation of the system conduct testing and balancing to insure that required amount of outdoor air is entering each habitable room and provide a written report documenting the outdoor airflow rates. Do not use exhaust only mechanical outdoor air systems, use only balanced outdoor air supply and

exhaust systems or outdoor air supply only systems. Provide a manual for the occupants or maintenance personnel, that describes the purpose of the mechanical outdoor air system and the operation and maintenance requirements of the system.

$PM_{2.5}$ Outdoor Air Concentration Mitigation. Install air filtration with sufficient $PM_{2.5}$ removal efficiency (e.g. MERV 13 or higher) to filter the outdoor air entering the mechanical outdoor air supply systems, such that the indoor concentrations of outdoor $PM_{2.5}$ particles are less than the California and National $PM_{2.5}$ annual and 24-hour standards. Install the air filters in the system such that they are accessible for replacement by the occupants or maintenance personnel. Include in the mechanical outdoor air ventilation system manual instructions on how to replace the air filters and the estimated frequency of replacement.

APPENDIX A

INDOOR FORMALDEHYDE CONCENTRATIONS
AND THE
CARB FORMALDEHYDE ATCM

With respect to formaldehyde emissions from composite wood products, the CARB ATCM regulations of formaldehyde emissions from composite wood products, do not assure healthful indoor air quality. The following is the stated purpose of the CARB ATCM regulation - *The purpose of this airborne toxic control measure is to "reduce formaldehyde emissions from composite wood products, and finished goods that contain composite wood products, that are sold, offered for sale, supplied, used, or manufactured for sale in California".* In other words, the CARB ATCM regulations do not "assure healthful indoor air quality", but rather "reduce formaldehyde emissions from composite wood products".

Just how much protection do the CARB ATCM regulations provide building occupants from the formaldehyde emissions generated by composite wood products? Definitely some, but certainly the regulations do not "*assure healthful indoor air quality"* when CARB Phase 2 products are utilized. As shown in the Singer et. al., 2020 study of new California homes, the median indoor formaldehyde concentration was of 22.3 $\mu g/m^3$ (18.2 ppb), which corresponds to a cancer risk of 112 per million for occupants with continuous exposure, which is more than 11 times the CEQA cancer risk of 10 per million.

Another way of looking at how much protection the CARB ATCM regulations provide building occupants from the formaldehyde emissions generated by composite wood products is to calculate the maximum number of square feet of composite wood product that can be in a residence without exceeding the CEQA cancer risk of 10 per million for occupants with continuous occupancy.

For this calculation I utilized the floor area (2,272 ft^2), the ceiling height (8.5 ft), and the number of bedrooms (4) as defined in Appendix B (New Single-Family Residence Scenario) of the Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions for Indoor Sources Using Environmental Chambers, Version 1.1, 2017, California Department of Public Health,

Richmond, CA. https://www.cdph.ca.gov/Programs/CCDPHP/DEODC/EHLB/IAQ/Pages/VOC.aspx.

For the outdoor air ventilation rate I used the 2019 Title 24 code required mechanical ventilation rate (ASHRAE 62.2) of 106 cfm (180 m^3/h) calculated for this model residence. For the composite wood formaldehyde emission rates, I used the CARB ATCM Phase 2 rates.

The calculated maximum number of square feet of composite wood product that can be in a residence, without exceeding the CEQA cancer risk of 10 per million for occupants with continuous occupancy are as follows for the different types of regulated composite wood products.

Medium Density Fiberboard (MDF) – 15 ft^2 (0.7% of the floor area), or
Particle Board – 30 ft^2 (1.3% of the floor area), or
Hardwood Plywood – 54 ft^2 (2.4% of the floor area), or
Thin MDF – 46 ft^2 (2.0 % of the floor area).

For offices and hotels the calculated maximum amount of composite wood product (% of floor area) that can be used without exceeding the CEQA cancer risk of 10 per million for occupants, assuming 8 hours/day occupancy, and the California Mechanical Code minimum outdoor air ventilation rates are as follows for the different types of regulated composite wood products.

Medium Density Fiberboard (MDF) – 3.6 % (offices) and 4.6% (hotel rooms), or
Particle Board – 7.2 % (offices) and 9.4% (hotel rooms), or
Hardwood Plywood – 13 % (offices) and 17% (hotel rooms), or
Thin MDF – 11 % (offices) and 14 % (hotel rooms)

Clearly the CARB ATCM does not regulate the formaldehyde emissions from composite wood products such that the potentially large areas of these products, such as for flooring, baseboards, interior doors, window and door trims, and kitchen and bathroom cabinetry, could be used without causing indoor formaldehyde concentrations that result in CEQA

cancer risks that substantially exceed 10 per million for occupants with continuous occupancy.

Even composite wood products manufactured with CARB certified ultra-low emitting formaldehyde (ULEF) resins do not ensure that the indoor air will have concentrations of formaldehyde the meet the OEHHA cancer risks that substantially exceed 10 per million. The permissible emission rates for ULEF composite wood products are only 11-15% lower than the CARB Phase 2 emission rates. Only use of composite wood products made with no-added formaldehyde resins (NAF), such as resins made from soy, polyvinyl acetate, or methylene diisocyanate can ensure that the OEHHA cancer risk of 10 per million is met.

If CARB Phase 2 compliant or ULEF composite wood products are utilized in construction, then the resulting indoor formaldehyde concentrations should be determined in the design phase using the specific amounts of each type of composite wood product, the specific formaldehyde emission rates, and the volume and outdoor air ventilation rates of the indoor spaces, and all feasible mitigation measures employed to reduce this impact (e.g. use less formaldehyde containing composite wood products and/or incorporate mechanical systems capable of higher outdoor air ventilation rates). See the procedure described earlier (i.e. Pre-Construction Building Material/Furnishing Formaldehyde Emissions Assessment) to ensure that the materials selected achieve acceptable cancer risks from material off gassing of formaldehyde.

Alternatively, and perhaps a simpler approach, is to use only composite wood products (e.g. hardwood plywood, medium density fiberboard, particleboard) for all interior finish systems that are made with CARB approved no-added formaldehyde (NAF) resins.

Re: Expert review of Memorandum of Negative Declaration of Chacon Farms Project: Tentative Tract Map No. 39076 PROJ23-0029; San Jacinto, California, with respect to agricultural matters

Dear Ms. Cretcher and Mr. Drury:

At your request, we have reviewed the *Negative Declaration* (hereinafter, *MND*) of the City of San Jacinto for the Chacon Farms Project: Tentative Tract Map No. 39076, PROJ23-0029; dated October 20, 2025—hereinafter, the *New Gen Project*— to comment on agricultural resources in our capacity as agriculture experts.

We, House Agricultural Consultants (hereinafter, *HAC*), are an agricultural-consulting firm that has analyzed agricultural impacts of numerous similar development projects over a period of many years. These are our first comments on this project. A description of our qualifications as consultants follows as an appendix to this memorandum.

In brief, we comment on three problematic aspects of the MND that cause it to fail to prove its negative declaration finding specifically related to agricultural resources. The MND:—

1) The MND does not comply with CEQA requirements to analyze impacts on agricultural resources. Discussed under 1, below.

2) The MND fails to comply with the general-plan policies of the City of San Jacinto. Discussed under 2, below.

1 The MND agricultural-resource analysis fails to comply with CEQA requirements

1.1 Conversion of Prime Farmland and Farmland of Statewide Importance. *Item a* in the CEQA checklist for impacts to agricultural resources requires that the responsible agency determine whether the project would "Convert prime farmland, unique farmland, or farmland of statewide importance (farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use".

In making a "Less Than Significant" impact finding for *item a* above the MND has failed to correctly analyze the project's impact by a curious form of circular reasoning.

In the Discussion portion of section 4.2.1, "Agriculture and Forestry Resources Impact Analysis", the MND states that the proposed project site is located on Prime Farmland and Farmland of Statewide Importance, based on the city's own review of the California Important Farmland Finder Map, prepared by the California Department of Conservation, Farmland Mapping and Monitoring Program (FMMP), (FMMP 2023).

The MND then observes that the San Jacinto General Plan Land Use Map does not designate lands specifically for agricultural use, but instead mostly designates them for a mix of residential and non-residential development, and that this "could", and is expected to "result in the conversion of many of these Prime Farmland or Farmland of Statewide Importance areas to urban uses." Following, this, the MND concedes that the project actually would convert Prime Farmland and Farmland of Statewide Importance on the project site to non-agricultural uses.

The defective reasoning provided by the MND is that because the city' general plan anticipates that the development of this property will convert the farmland to urban use: "Therefore, impacts related to conversion of farmland would be less-than significant, and no mitigation is required." But this is a mere assertion of the part of the MND, and provides no analysis of the conversion impact; and, thus, the MND has failed to address *item a* of the CEQA checklist.

The MND mistakenly relies on the idea that, while the project site is Prime Farmland and Farmland of Statewide Importance, its conversion is somehow no longer significant because agricultural use is inconsistent with the City's General Plan, which designates an urban use for this property.

This wishful thinking on the part of the MND fails to recognize that California State law supersedes local planning documents and that therefore as a state statute, CEQA takes precedence over local planning in determining the level of significance. The City's plans do not remove the requirement to find a Potentially Significant Impact in this situation. As a state-mandated environmental law, CEQA requires that all discretionary projects, including local planning decisions, identify and mitigate significant environmental impacts. The MND has stated the project will convert Prime Farmland and Farmland of Statewide Importance, and this is a Potentially Significant Impact.

1.2 The MND fails to consider cumulative impacts. *Item e* of the CEQA checklist for Agricultural Resource environmental impacts requires analysis of whether the project would

> Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

In its discussion of this requirement the MND again confirms that the proposed project site is located on Prime Farmland and Farmland of Statewide Importance. Again the MND offers a insular argument: "The construction and operation of the Project would be confined to the Project footprint" and therefore "would not cause offsite conversion of farmland or forest land to non-agriculture or non-forest uses".

Again there is no analysis of such impacts in this MND, just a bald assertion. To comply with CEQA, the MND must prepare an analysis that considers the cumulative impact of this project, which necessarily requires the study of other urban development in the area, considering such effects as total amount of farmland lost, farmland conversion trends, and what would be a significant lost amount and a significant loss trend to which this project contributes.

1.3 Less-than-significant impact with mitigation incorporated. The project has at hand a well-established mitigation tool to turn a potentially significant impact into a less-than-significant impact with mitigation incorporated. This is to require the purchase of an agricultural-conservation easement (ACE) on similar= area and -quality farmland (that is, Prime Farmland and Farmland of Statewide Importance) elsewhere.

The standard method of mitigation accepted through legal precedent in California is through the purchase of an agricultural-conservation easement. The outline of such an easement is available from the California Department of Conservation as a "model easement" which can be fitted to particular circumstances.

2 The MND fails to comply with the general-plan policies of the City of San Jacinto

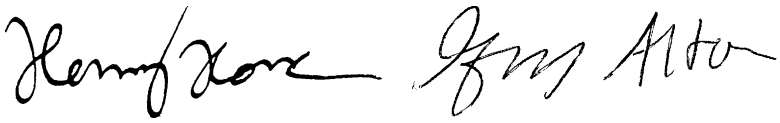
San Jacinto's general plan makes a number of policy statements relating to agriculture; the MND fails to comply with these policies. In summary:—

1.) GP policy to address agriculture, in compliance with state law.— In section LU-2, "Overview", the general plan states: "State law requires the Land Use Element to address proposed general distribution, general location and extent of the uses of the land for housing, business, industry, open space, including agriculture . . . ."

By ignoring the Potential Significant Impact (as defined by CEQA) of converting Prime Farmland and Farmland of Statewide Importance of this project, the MND has failed to address the uses of the land for agriculture.

2) GP policy to prioritize alternatives to impacting agriculture.— In Section LU-2e, the general plan states as a policy "Give priority to redevelopment and infill projects that reduce development pressure on agricultural lands and other sensitive resources."

The MND has failed to consider project alternatives such as redevelopment and infill which would reduce development pressure on agricultural lands such as the proposed project site, and therefore fails to comply with the general plan of the City of San Jacinto.



3) GP policy to maintain agricultural feasibility.— In section LU-2f, the general plan states as a policy: "Work with property owners and agricultural operations interested in retaining agricultural land to identify feasible ways to maintain the land in agricultural production."

By not making a finding of less-than-significant with mitigation incorporated that would establish an ACE or utilize some other acceptable method of mitigation that retains agricultural land or maintains land in agricultural production, the MND has failed to comply with the City of San Jacinto's general plan..

3 Closing

This concludes our current brief review of the MND of the New Gen Project. A description of our professional qualifications is found in the appendix that follows.

Sincerely,

Henry House Gregory A. House

4 Qualifications of House Agricultural Consultants

4.1 Gregory A. House. Agricultural Consultant · Agronomist · Professional Farm Manager · Rural Appraiser · Farmer.

Experience:—

– Agricultural consultant, 1983–present—House Agricultural Consultants, providing agricultural-science, economics, management, and appraisal services.

– Farmer, 1987–present.—Growing organic apples, peaches, cherries, apricots, field and seed crops.

– Corporation secretary and consulting agronomist, 1977–1983—Hannesson, Riddle & Associates, Inc.

Professional affiliations:—

– American Society of Farm Managers & Rural Appraisers
– American Society of Agronomy
– Crop Science Society of America
– Soil Science Society of America
– California Certified Organic Farmers
– California Farm Bureau.

Accreditations:—

– Accredited Farm Manager (AFM), American Society of Farm Managers & Rural Appraisers, certificate no. 501

– Certified Professional Agronomist (CPAg), American Registry of Certified Professionals in Agronomy, Crops. & Soils, Ltd., certificate no. 2319

– Certified Crop Advisor (CCA), American Registry of Certified Professionals in Agronomy, Crops. & Soils, Ltd.

N.B.—These credentials have continuing-education requirements with which I am in compliance.

Education:—

– B.S., Crop Ecology, University of California, Davis, 1975, with Honors

– Numerous courses from the University of California Extension in agricultural economics, crop management, real estate, & hazardous waste management

– Cornell University Certificate Program, Implementing Good Agricultural Practices: A Key to Produce Safety

– Courses of the American Society of Farm Managers & Rural Appraisers: Principles of Rural Appraisal · Advanced Rural Appraisal · Eminent Domain · Report Writing School · Economics of Farm Management · Principles of Farm Management · Standards and Ethics · Permanent Plantings Seminar · Standards and Ethics for Farm Managers · ASFMRA Code of Ethics

National Uniform Standards of Professional Appraisal Practice Courses of the Appraisal Institute: Basic Valuation Procedures · Real Estate Statistics and Valuation Modeling · Advanced Income Capitalization · Valuation of Conservation Easements Certificate Program · Condemnation Appraising: Principles and Applications · Appraising the Appraisal · How Tenants Create or Destroy Value: Leasehold Valuation and Its Impact on Value.

– Former Accredited Rural Appraiser (ARA), American Society of Farm Managers & Rural Appraisers, certificate no. 749 (retired).

Expert-witness court testimony:—

– Superior Court Qualified Expert Witness in the following California counties: Alameda, Colusa, Kern, Fresno, Madera, Merced, Monterey, Orange, Riverside, San Joaquin, San Luis Obispo, Santa Barbara, Santa Cruz, Solano, Sonoma, Sutter, Ventura, Yolo

– United States Tax Court qualified expert witness

– United States Bankruptcy Court qualified expert witness.

A comprehensive listing of Mr. House's depositions and trial appearances is available upon request. The list currently numbers seventy-two matters in which Mr. House gave sworn testimony (either deposition, trial or hearing appearance, or both), including thirty-two trial appearances.

Awards:—

– CCOF Presidential Award, California Certified Organic Farmers, February, 2001.

– Meritorious Service in Communications, American Society of Farm Managers & Rural Appraisers, November 2004.

– H.E. Buck Stalcup Excellence in Education Award, American Society of Farm Managers & Rural Appraisers, October, 2011.

Appointments & activities:—

– Adjunct Lecturer, University of California, Davis, Department of Agricultural & Resource Economics, current; Courses ARE 140 Farm Management; ARE 145 Appraisal of Farms & Rural Resources, 2015–2021.

– Instructor, *Principles of Farm Management*, an Internet course of the American Society of Farm Managers & Rural Appraisers, 1996–2007.

– President, California Chapter American Society of Farm Managers & Rural Appraisers 1994–1995; Secretary–Treasurer, 1984–1990.

– Board of Directors, Yolo Land Trust, 1993–2001.

– Board of Directors, American Red Cross, Yolo County Chapter 1987–1989.

– Member, Yolo County Right to Farm Grievance Committee 1992–1995.

– Vice Chairman, Management Education Committee, American Society of Farm Managers & Rural Appraisers, 1998–2000 (committee member since 1986).

– Yolo County LAFCo Agricultural Forum LESA subcommittee, 1999.

– California Certified Organic Farmers: Treasurer of the Board of Directors, 1998–2003; Executive Director, 1999–2000; Member of the Finance Committee, 1998–current.

– CCOF Foundation Going Organic Program, Management Team member, 2006–2012.

– USDA Organic Grant Panel member, Washington, DC, 2002.

– City of Davis Open Space and Habitat Commission, 2006–2016, Chairman, 2007–2009.

– Member, Fruit Orchard Technical Advisory Group, Filoli Gardens, Woodside, California.

– Member, Organic and Sustainable Agriculture Program Steering Committee, University of California Cooperative Extension, Yolo and Solano Counties, California, 2008–2013.

– Member, Solano County Right to Farm Grievance Committee 2022–present.

Speaking engagements:—

– Guest lecturer, University of Florida at Gainesville–Vegetable Crops Department. Seminar on transition to organic agriculture, November 1994.

– Featured program speaker, 1995 annual *Eco-Farm Conference*. Lecture on economics of organic-apple production, Asilomar, California, 1995.

– Guest speaker, multiple events of Community Alliance with Family Farmers. Presentations on farm management and agricultural economics, 1996 and 1997.

– Instructor, American Society of Farm Managers & Rural Appraisers. Course "M-12", *Standards and Ethics for Professional Farm Managers*, March 1997.

– Guest speaker, American Horticultural Society. Lecture entitled *Challenges of Organic Stone Fruit Production*, Sacramento, California, July 2001.

– Organizer and presenter, *Going Organic Kickoff Meetings*. A program of California Certified Organic Farmers, November 2005 and December 2006.

– Master of ceremonies, annual meeting of California Certified Organic Farmers. Sacramento, California, February 2006.

– Featured program speaker, 2012 annual *Eco-Farm Conference*. Lecture entitled *Imitating Natural Systems: Towards an Indigenous Agro-forestry*, Asilomar, California, 2012.

– Seminar presentation, American Society of Farm Managers & Rural Appraisers. *Rapid Fire Seminar: What Makes for Comparable Sales in Condemnation Appraisal*—Reno, Nevada, October 2013.

– Featured program speaker, 2014 annual *Eco-Farm Conference*. Lecture entitled *Food Safety Regulatory Compliance in Fruit Orchards*, Asilomar, California, 2014.

Publications:—

– *Principles of Farm Management*, course "M-10", a forty-hour professional-credit online educational offering of the American Society of Farm Managers & Rural Appraisers.

– *Conservation Issues in Agriculture*, a unit of course "M-25", a fifteen-hour professional-credit online educational offering of the American Society of Farm Managers & Rural Appraisers.

– *A Primer on Organic Agriculture*, an article in *2006 Trends in Agricultural Land and Lease Values*, a publication of the California Chapter of the American Society of Farm Managers & Rural Appraisers.

– *Case Study: Using Indigenous Agroforestry Management Techniques to Support Sustainability in Production Agriculture*, a paper-poster presented at *Harlan II, An International Symposium on Biodiversity in Agriculture: Domestication, Evolution and Sustainability*, September 14–18, 2008, University of California–Davis.

4.2 Henry House. Economist · Rural-Property Appraiser · Agricultural-Management Expert · Farm Manager · Farmer.

Summary of professional expertise:—

– California appraiser's license number AG-3010876 (Certified General Appraiser). This is the highest level of licensing for a real-estate appraiser and additionally qualifies Mr. House to value business interests, intellectual property, and other specialized assets and to opine on appraisals by others (the service of appraisal review).

– Management controversies regarding agricultural business; standard of care.

– Agricultural economics and business lost profits; econometric controversies.

– Value of lost crops, emblements, and foodstuff inventory.

– Farm management: good farming practices in row crops and orchards, such as almonds and walnuts.

– Livestock management: carrying capacity of land, range management, standard of care for control of grazing animals, fencing.

– Right-to-farm issues, e.g., vehicle–agriculture, vehicle–livestock conflicts in agricultural districts, feasibility of agriculture on urban-proximate lands, spraying drift.

– Appraisal: valuation in disputes concerning real property, valuation of agricultural and rural land, valuation of valuation of agricultural personal property (e.g., chattel), valuation of agricultural-commercial facilities (e.g., aquaculture), valuation of development rights, assessed-value analysis for assessment appeal.

– Condemnation: valuation services for this appraisal specialty, including severance damages, in support of eminent-domain litigation.

– Conservation projects: Mr. House has assisted numerous land trusts in establishing conservation easements, including The Nature Conservancy, Yolo Land Trust, Solano Land Trust, Agricultural-Natural Resources Trust, River Partners, and Sutter Buttes Regional Land Trust.

– Management evaluation of commercial equestrian facilities.

– Management of rural property.

– Statistical analysis, geographic-information-system (GIS) analysis, and software engineering (analytics).

– Expert services to litigation on the foregoing with deposition and trial-testimony experience; partial list of matters below. Qualified expert in the counties of Butte, Colusa, Kern, and Riverside.

Representative recent matters in which Mr. Henry House was retained by counsel as a forensic expert (venued in a superior court of the State of California, except as noted):—

Court for the Northern District of California, March 2026.—A confidential matter involving economic losses and management controversies with respect to CBD hemp crops, venued in federal court.

County of Santa Clara, March 2026.—Topic: agricultural economics · almonds · private equity. *Park Capital Management, LLC, derivatively on behalf of Orchard Yield Fund I, LP, plaintiff, v. Satya Chillara, Rajs Funds LLC, Sunil Dhar, et al., defendants, and Orchard Yield Fund I, LP, nominal defendant* (case no. 22CV402044). A controversy over the profitability of almond orchards developed with private-equity funding in Fresno County in 2016. Scope included a study of the agricultural economics of almonds from the 2010s to present as background to assist the court in understanding appropriate investors' expectations from a private-equity investment in almond orchards made in 2016. Mr. House's opinions were submitted to the court in a narrative report.

County of Hamilton, State of Ohio, January 2026.—Topic: agricultural lost profits · pistachios · private equity · racketeering. *Kingman 1139 Investment Partners LLC v. Wilbert B. Markovits, Esq., Jonathan R. Deters, Esq., and Markovits, Stock & Demarco LLC.* A matter of legal malpractice claimed regarding the client's prior representation in a matter concerning an Arizona pistachio orchard, financed by private equity, whose investment was lost to a racket. Scope included feasibility of the pistachio-orchard development, investors' expectations in the private-equity investment as of 2016, and economic damages from the loss of the investment in the project. Mr. House's opinions were submitted to the court in a narrative expert report.

County of Barron, State of Wisconsin, December 2025.—Topic: agricultural economics · foodstuff valuation · cheese. *Damages in Dairy Pride, et al. v. Comstock Creamery, et al.* A matter of the loss of an warehouse of organic white-cheddar cheese, principally amounting to chattel value of the wholesale inventory, but also including a component of lost profits from a retail cheese store. Mr. House's opinions were submitted to the court in a narrative expert report.

County of Tulare, October 2025.—Topic: econometrics · agricultural irrigation · evapotranspiration · water rights · California Sustainable Groundwater Management Act (SGMA). *Friant Water Authority v. Eastern Tule Groundwater Sustainability Agency* (case no. VCU306343). A matter of claimed economic damages due to the defendant's method of charging and accounting for groundwater drawn from a regulated basis by its members, primarily farms growing diverse crops. Scope included discounted present valuation of a revenue-sharing agreement having a substantially greater nominal value, informed by expertise in econometrics and farm management.

County of Yellowstone, State of Montana, September 2025.—Topic: standard of care for crop farming · fire safety · wheat. *Colin Funk v. Stephen Becker and Becker Farming* (case no. DV-56-2024-0001290-NE in Montana's Thirteenth Judicial District). A matter of fire damage to rural-residential land near Billings, Montana. The plaintiff retained and designated Mr. House to analyze the defendants' standard of care in performing harvest operations on a wheat field where a fire originated. To our understanding, Mr. House's opinions, which were submitted to the court in a written report, were of evidentiary relevance to the plaintiff's legal theory of negligence by the defendants.

County of Sacramento, September 2025.—Topic: farming standard of care · agricultural dust · walnuts. *Gerald Larson, et al. v. Robert Larson, et al.* (case no. 34-2021-00294930, consolidated with 34-2021-00311331 and 34-2022-00327390). An auto-accident case wherein dust allegedly originating from some defendants' walnut orchard obscured visibility on a public road, contributing to

an accident with multiple vehicles involved. Mr. House was retained and designated to review the location of the incident, the crops and nature of agriculture in the area, and the standard of care used by the farming defendants, reasonableness of their actions, and their process for conducting agricultural operations, opining on the same and in rebuttal of other experts.

County of Butte, June 2025.—Topic: agricultural lost profits · olives. *Zih Jun Wang v. Pacific Gas & Electric Company, et al.* A case regarding an olive grove in Butte County, where portion of the trees were destroyed by a utility company, in substantial excess of the utility's real-property rights under its easement to undertake fire-prevention activities. Mr. House opined on the economic impact of the trees' destruction, including cost of restoration, timeline to return to productive capacity, and lost profits, thereby assisting the client to obtain a settlement.

County of Wake, State of North Carolina, November 2024.—Topic: farm management, standard of care for labor contracting. *Carlos Moreno, et al. v. Florida Orange Gold, LLC, José Javier Gutierrez, Gilberto Gutierrez, and Howell Farming Co., Inc.* Mr. House was retained and designated for expertise on the client's standard of care in hiring contract labor in Wayne County, North Carolina. Plaintiff Moreno suffered a workplace injury, alleged to have been caused by heat sickness, while weeding watermelons as a contract laborer (as an employee of Florida Orange Gold) on the farmland of client Howell Farming Co. (defendant); the plaintiffs' cause of action against Howell was negligence. Mr. House opined on several controverted factual elements of the allegation of negligence, including the division of responsibility for workers' safety between farm-labor contractor (employer) and farmer hiring contract labor (nonemployer owner of the crop and possessor of the farmland), customary and accepted practices to manage risk of heat illness from hot weather, and whether summertime weeding in eastern North Carolina meets the characteristics of an "inherently dangerous activity" as defined by North Carolina law.

County of Sacramento, July 2024.—Topic: real-estate costs to cure · appraisal · conspiracy.—*Robert Williams and Christina Williams v. Dynamic Asset Solutions, LLC, Prato Real Estate, Inc., Bricker Construction, Inc., and Finley Home Services, Inc., et al.* Mr. House was retained by Williams and opined in deposition on the fair market value of the subject property, a luxury home, in as-sold condition, its fair market value as if it had not suffered from damage discovered by buyer, and the market cost of repairs. Additional details on this matter are found in Mr. House's separately provided testimony list.

County of Los Angeles, March 2024.—Topic: real-estate appraisal. *JP's Nevada Trust v. 2Bulls Conservation Ventures et al.* Mr. House was retained by JP's Nevada Trust and opined on valuation methodology and opined the fair market value of three ranch properties at the times of three controverted transactions in service of the plaintiff in a dispute in which the buyer (plaintiff) alleged conspiracy to defraud and a pattern of racketeering activity in violation of 19 U.S.C. § 1962(c), the Racketeer Influenced and Corrupt Organizations Act (RICO). Additional details on this matter are found in Mr. House's separately provided testimony list.

County of Nevada, November 2023.—Topic: lost profits. *Andrew Hainsworth, et al. v. Pacific Gas & Electric Company.* A fire loss on a property in Rough and Ready. Mr. House was retained by Hainsworth and subsequently opined written findings regarding the plaintiff's lost profits from licensed *Cannabis* production in rural Nevada County, including an opinion on the market value of Nevada County-grown *Cannabis* relative to the market in aggregate.

County of Franklin, State of Washington, September 2023–June 2024.—Topic: real-estate appraisal. *Ice Harbor Properties, LLC and Certain Underwriters Subscribing to Certificate No. XLS0342717 v. Agri Control Technologies, Inc. d.b.a. BTU Ventilation and Parrish Stakkeland* (case no. 20-2-50118-11, Superior Court of the State of Washington, County of Franklin). A dispute over the compensation due by the defendants for the fire loss of the plaintiff's real property, a warehouse specialized for climate-controlled bulk storage of potatoes and onions. The plaintiffs retained and designated Mr. House as a rebuttal witness to opine on the fair market value of the lost building, the market for similar buildings, and other experts' opinions.

County of Tulare, July 2023.—Topic: livestock economics · real-estate appraisal. *Jones, et al. v. Pleasant Valley Canal Company, et al.* (case no. VCU274417). A dispute over a cattle-ranching and hay-growing operation which the plaintiffs alleged had been damaged by the operation of a canal crossing the plaintiffs' property. The scope for which Mr. House was retained and designated by the defendants included analyzing the plaintiffs' alleged diminution of value of real estate, analyzing the plaintiffs' alleged economic loss from death of cattle, and opining on the water company's standard of care in maintenance of its canal. Additionally, I assisted retaining counsel to engage an expert in veterinary pathology.

County of Minidoka, State of Idaho, March–August 2023.—Topic: standard of care for livestock fencing. *Michael O. Ottley v. Hanssen et al.* (case no. CV34-21-00168, District Court of the Fifth Judicial District of the State of Idaho). An auto-accident case wherein the defendants' cattle had escaped onto a public road and been struck by the plaintiff in rural Minidoka County, Idaho. The defendants retained and designated Mr. House to analyze the defendants' standard of care in managing the cattle, to opine on the quality of the defendants' fencing in comparison to locally accepted standards of adequacy, and for rebuttal of the plaintiff's fencing expert.

County of Imperial, November 2022–February 2024.—Topic: agricultural economics · hay. *Freddi Abatti et al. v. James Davis, et al.* (case no. ECU002597). The defendants retained and designated Mr. House to evaluate the lost profits in hay crops in Imperial County resulting from a fire.

County of Merced, September 2022–January 2024.—Topic: agricultural economics · lost profits · almonds. *Athwal Investments et al. v. San Luis Pump Co. et al.* (case no. 20CV03787). A matter of almond trees in Merced County allegedly damaged consequent to lack of irrigation water. Scope included analysis of the economic lost profits from orchard trees lost and replanted as well as from lost yield in service of two defendants.

See also.—Mr. House's separately provided listing of testimonies lists additional matters.

Partial list of management-consulting assignments:—

– Numerous consulting assignments for Leland Stanford Junior University on the management of its agricultural lands, which feature cattle, horses, and vegetable crops. Topics addressed have included livestock standard of care, carrying capacity of lands, safety of animals, safety of structures, and management of drainage and water quality.

– Consulting farm management for John and Marie Cronin Trust B, a landowner near Rio Vista, California. Lands were utilized for cattle grazing.

– Numerous appraisal assignments of farmland and rangeland properties utilized for crops and livestock (cattle, sheep, and aquaculture).

– A list of additional management-consulting clients served available on request.

Experience:—

Agricultural consultant, appraiser, consulting agricultural economist.— House Agricultural Consultants, providing agricultural science, economics, management, and appraisal services. 2000–present.

Farmer.— Coco Ranch, a family farm growing organic apples, peaches, cherries, and field crops and raising sheep, poultry, and goats. 2000–present.

Education:—

– B.S., "Natural History", University of California, Davis, 1999, with Honors. Coursework in agronomy, botany, ecology, entomology, geology, hydrology, nematology, plant pathology, soil biology, sustainable agriculture, statistics, and wildlife biology.

– Numerous courses of the American Society of Farm Managers & Rural Appraisers (ASFMRA) regarding farm management, agricultural consulting, and appraisal. Recently completed: *Livestock Ranch Seminar* (February 15, 2024) and *Appraisal of Water Rights Seminar* (March 8, 2024), both in ASFMRA's appraisal-education series.

– Numerous courses of the Appraisal Institute regarding real-estate appraisal.
– Courses from Savory Institute regarding livestock management.

Appointments & activities:—

– Lecturer–instructor, Department of Agricultural & Managerial Economics, University of California–Davis, 2015–present.

– 2026 cohort of Prohuman Foundation's Prohuman Ambassador Program. The Prohuman Foundation is a 501(c)(3) nonprofit organization that exists to promote the foundational truth that every person is a unique individual united by our shared humanity.

– Member, Solano County Farm Bureau.
– Member, American Society of Farm Managers & Rural Appraisers.
– Board of Directors, Davis Media Access, Davis, California, 2014–2017.
– Board of Directors, Davis Farmers Market Association, 2001–2003.

Publications & speaking engagements:—

– Course ARE 140, "Farm Management", and are 145, "Appraisal of Farms & Rural Resources", University of California–Davis, 2015–present.

– *Principles of Farm Management*, Course M-10, a 40-hour professional credit Internet educational offering of the American Society of Farm Managers & Rural Appraisers, 1999–2023.

– Educational speaker at the annual meeting of the California Chapter of the American Society of Farm Managers & Rural Appraisers, November 19, 2021, Coalinga, California. Topic: valuation of conservation easements.

RE: Chacon Farms Project

I write to comment on potential impacts to biological resources that would result from development of the proposed Chacon Farms Project. With a General Plan Amendment and Zone Change to increase allowed housing density, the project would add 419 single-family residential units on 75.7 acres at the northwest corner of W Esplande Ave and Cawston Ave in San Jacinto, California. My comments that follow address my concerns that the Draft Initial Study/Mitigated Negative Declaration (IS/MND), supported by a biological technical report prepared by Psomas (2024), mischaracterizes the existing environmental setting, and that its impacts analysis is flawed and its mitigation measures are inadequate.

My qualifications for preparing expert comments are the following. I hold a Ph.D. degree in Ecology from University of California at Davis, where I also worked as a post-graduate researcher in the Department of Agronomy and Range Sciences. My research has been on animal density and distribution, habitat selection, wildlife interactions with the anthrosphere, and conservation of rare and endangered species. I authored many papers on these and other topics. I served as Chair of the Conservation Affairs Committee for The Wildlife Society – Western Section. I am a member of The Wildlife Society, and I've lectured part-time at California State University, Sacramento. I was Associate Editor of wildlife biology's premier scientific journal, The Journal of Wildlife Management, as well as of Biological Conservation, and I was on the Editorial Board of Environmental Management. I have performed wildlife surveys in California for forty-one years. My CV is attached.

THE WILDLIFE COMMUNITY AS A BIOLOGICAL RESOURCE

Most environmental reviews pursuant to the California Environmental Quality Act (CEQA) focus on special-status species because CEQA's Checklist Evaluation of Environmental Impacts Question IV(a) asks specifically whether the project would adversely affect special-status species. However, this narrowly focused question is part of a larger policy goal of CEQA, which is "to prevent the elimination of fish or wildlife species due to man's activities, insure that fish and wildlife populations do not drop below self-perpetuating levels, and preserve for future generations representations of all plant and animal communities and examples of the major periods of California history." Pub. Res. Code § 21001(c). This policy is not restricted to special-status species; it also applies to wildlife populations and plant and animal communities, as it must, because special-status species are inter-dependent members of ecological communities. The

CEQA Guidelines Section 21155.1 defines wildlife habitat as "the ecological communities upon which wild animals, birds, plants, fish, amphibians, and invertebrates depend for their conservation and protection." This definition is consistent with the scientific definition of habitat, which is that portion of the environment that is used by members of a species for survival and reproduction (Hall et al. 1997). An essential portion of the environment used by any special-status species is composed of the collection of other species of plants and wildlife, because these species provide for special-status species their forage, refugia and nest substrates, and some serve as ecological mutualists. The CEQA Checklist Evaluation assigns priority to special-status species to balance information and cost, but it does not exclude the need to evaluate environmental impacts to other species, which, after all, are members of the very communities within which special-status species inter-depend for survival and reproduction.

The species I consider to be special-status species are those listed in California's Special Animals List inclusive of threatened and endangered species under the California and federal Endangered Species Acts, candidates for listing under CESA and FESA, California's Fully Protected Species, California species of special concern, and California's Taxa to Watch List (https://nrm.dfg.ca.gov/FileHandler.ashx?DocumentID=109406), continental and region-specific US Fish and Wildlife Service Birds of Conservation Concern (https://www.fws.gov/sites/default/files/documents/birds-of-conservation-concern-2021.pdf), and naturally rare species such as raptors protected by California's Birds of Prey laws, Fish and Game Code Sections 3503, 3503.5, 3505 and 3513 (see https://wildlife.ca.gov/Conservation/ Birds/Raptors).

What follows is a summary of a site visit to detect as many of the species of wildlife as possible within the short time available. The visit was also intended to detect as many of the special-status species as possible, but with the understanding that most special-status species are less readily detectable due to rarity and crypticity. Nonetheless, the species detected can indicate the ecological integrity of the site and thus the likelihood of occurrence of special-status species not yet detected.

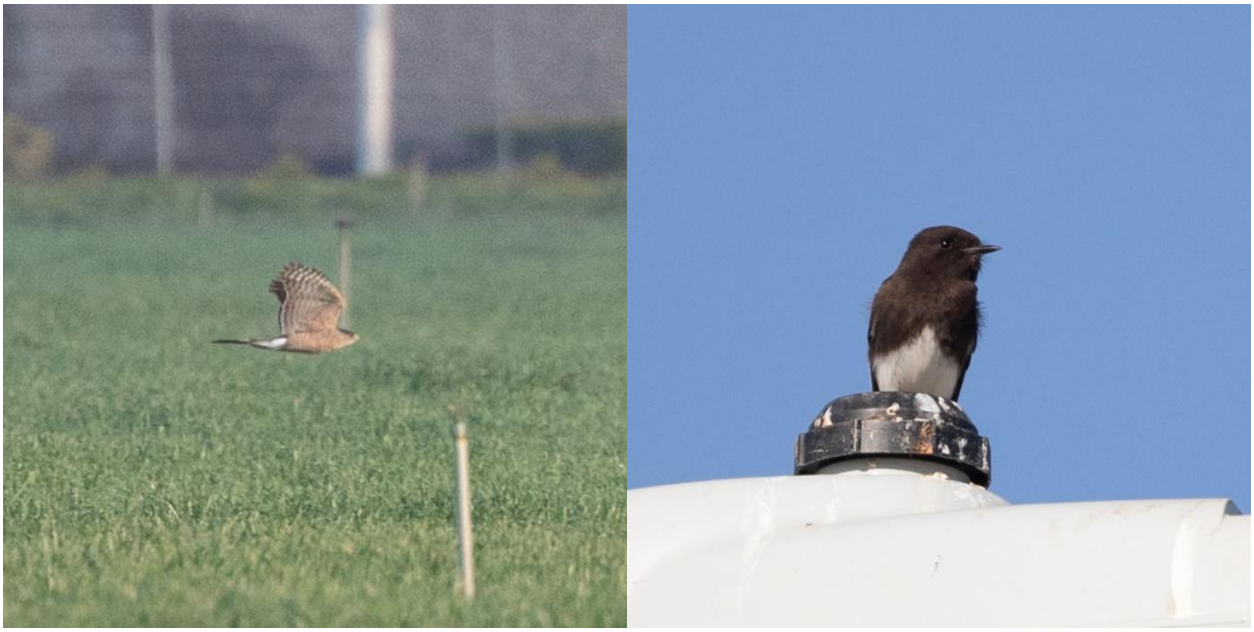
SITE VISIT

On my behalf, Noriko Smallwood, a wildlife biologist with a Master of Science Degree from California State University Los Angeles, visited the site of the proposed project for 2.57 hours of diurnal survey from 06:43 to 09:17 hours on 28 March 2026, and for 0.58 hours of diurnal survey and 2.58 hours of nocturnal survey from 18:30 to 21:40 hours on 29 March 2026. During daylight, Noriko walked the site where accessible, stopping to scan for wildlife with use of binoculars. At night, Noriko affixed a Pettersson M500 acoustic bat detector to a 20-foot pole, and cabled the detector to her computer, which ran SonoBat Live. SonoBat Live identifies bat species based on the bats' sonograms that are detected by the M500. Noriko recorded all species of vertebrate wildlife she detected, including those whose members flew over the site or were seen just off site.

Conditions were sunny with 3 MPH west wind and temperatures of 58-70° F on 28 March 2026, and sunny to clear with 7 MPH south wind and temperatures of 80-69° F

on 24 March 2026. The site is primarily row crops with a small pond at the northeast corner (Photos 1 and 2).

Photos 1 and 2. *Views of the project site, 28 March 2026. Photos by Noriko Smallwood.*



Noriko saw nesting red-tailed hawks (Photo 3), Cooper's hawk and black phoebe (Photos 4 and 5), Anna's hummingbird and California gull (Photos 6-8), killdeer and mallard (Photos 9 and 10), barn swallow (Photo 11), red-winged blackbird and tricolored blackbird (Photos 12 and 13), savannah sparrow and lesser goldfinch (Photos 14 and 15), big brown bat, canyon bat, Mexican free-tailed bat, and Yuma myotis (Photos 16-19), among other species listed in Table 1. Noriko detected 42 species of vertebrate wildlife at or adjacent to the project site, including seven species with special status (Table 1).

Noriko Smallwood certifies that the foregoing and following survey results are true and accurately reported.

Table 1. *Species of wildlife Noriko observed in 2.57 hours of diurnal survey on 28 March 2026, and in 0.58 hours of diurnal and 2.58 hours of nocturnal survey on 29 March 2026.*

Common name	***Species name***	**Status[1]**	**Notes**
Baja California treefrog	*Pseudacris h. hypochondriaca*		Called from pond area
Cinnamon teal	*Spatula cyanoptera*		Pond, foraged
American wigeon	*Mareca amcericana*		Flew over
Mallard	*Anas platyrhynchos*		Pond, foraged
Rock pigeon	*Columba livia*	Non-native	Many
Eurasian collared-dove	*Streptopelia decaocto*	Non-native	
Mourning dove	*Zenaida macroura*		
Anna's hummingbird	*Calypte anna*		
Black-necked stilt	*Himantopus mexicanus*		Called from pond area
Killdeer	*Charadrius vociferus*		Foraged
California gull	*Larus californicus*	BCC, WL	Many flocks flew over
Great blue heron	*Ardea herodias*		
Turkey vulture	*Cathartes aura*	BOP	Circled just off site
Cooper's hawk	*Accipiter cooperii*	WL, BOP	Flew low over site
Red-tailed hawk	*Buteo jamaicensis*	BOP	Nesting in palm tree
Cassin's kingbird	*Tyrannus vociferans*		
Black phoebe	*Sayornis nigricans*		
Say's phoebe	*Sayornis saya*		
American crow	*Corvus brachyrhynchos*		
Common raven	*Corvus corax*		
Barn swallow	*Hirundo rustica*		Foraged
Bushtit	*Psaltriparus minimus*		Foraged on fringe, trees
Bewick's wren	*Thryomanes bewickii*		
Northern mockingbird	*Mimus polyglottos*		
European starling	*Sturnus vulgaris*	Non-native	
House sparrow	*Passer domesticus*	Non-native	
American pipit	*Anthus rubescens*		
House finch	*Haemorphous mexicanus*		
Lesser goldfinch	*Spinus psaltria*		Foraged
White-crowned sparrow	*Zonotrichia leucophrys*		
Savannah sparrow	*Passerculus sandwichensis*		Foraged
Song sparrow	*Melospiza melodia*		
Red-winged blackbird	*Agelaius phoeniceus*		Many
Tricolored blackbird	*Agelaius tricolor*	CT, BCC, SSC1	Flew over
Great-tailed grackle	*Quiscalus mexicanus*		
Yellow-rumped warbler	*Setophaga coronata*		
Yuma myotis	*Myotis yumanensis*	WBWG:LM	
Canyon bat	*Parastrellus hesperus*	WBWG:M	
Big brown bat	*Episticus fuscus*	WBWG:L	
Mexican free-tailed bat	*Tadarida brasiliensis*	WBWG:L	

Common name	*Species name*	Status[1]	Notes
California ground squirrel	*Otospermophilus beecheyi*		Just off site
Botta's pocket gopher	*Thomomys bottae*		Burrows

[1] Listed on CDFW's Special Animals List (https://nrm.dfg.ca.gov/FileHandler.ashx?DocumentID=109406) as CT or CE = California threatened or endangered; SSC_i = California Species of Special Concern with i = priorities 1, 2 and 3; WL = CDFW's Taxa to Watch List; WBWG = Western Bat Working Group with priority rankings, of low (L), moderate (M), and high (H); BCC = U.S. Fish and Wildlife Service's Bird of Conservation Concern (https://www.fws.gov/sites/default/files/documents/birds-of-conservation-concern-2021.pdf); and BOP = protected by Birds of Prey (California Fish and Game Code 3503.5, see https://wildlife.ca.gov/Conservation/Birds/Raptors).

With Noriko's finding of tricolored blackbird – a species listed as Threatened under the California Endangered Species Act – and with her findings of several other special-status species, there is at least a fair argument that can be made for the need to prepare and EIR to accurately characterize the wildlife community as part of the existing environmental setting, which is needed to predict potential project impacts and to formulate an effective mitigation strategy.

ANALYSIS OF RECONNAISSANCE SURVEY DATA

Noriko detected 42 species of vertebrate wildlife, which was a relatively large number for the brevity of her survey effort. All the species in Table 1 would lose habitat due to the project and its replacement of natural ground covers with impervious surfaces. Assuming the habitat that would remain within the region is at carrying capacity for each species at issue, habitat loss translates directly to a numerical decline in the species. Smallwood and Smallwood (2023) confirmed this habitat loss by measuring the impacts of similar development projects on species richness and the abundances of wildlife. Smallwood and Smallwood (2023) directly compared the species and the numbers of animals observed prior to development to the those observed after development, while they did the same at control sites. The measured losses of these species resulting from development is indicative of habitat loss, because habitat is defined as that portion of the environment that is used for survival and reproduction by members of a species (Hall et al. 1997).

However, the species of wildlife Noriko detected at the project site were not the only species that were present during her survey, as there are always species that are not detected. To demonstrate this, I fit nonlinear regression models to Noriko's accumulation of first detections of vertebrate wildlife species with time into her daytime surveys to predict the number of species that she would have detected with longer surveys or perhaps with additional biologists available to assist her. The type of model is a logistic growth model, which reaches an asymptote that corresponds with the theoretical maximum number of vertebrate wildlife species that could have been detected during the survey. The model fit to Noriko's survey data from the morning of 28 March predicts 42 species of vertebrate wildlife were available to be detected, or 9 more species than she detected that morning (Figure 1). Noriko's rate of species

detections exceeded the upper bound of the 95% confidence interval estimated from many other morning surveys we have completed in the Inland Empire region, thus indicating the project site is relatively species-rich for the region.

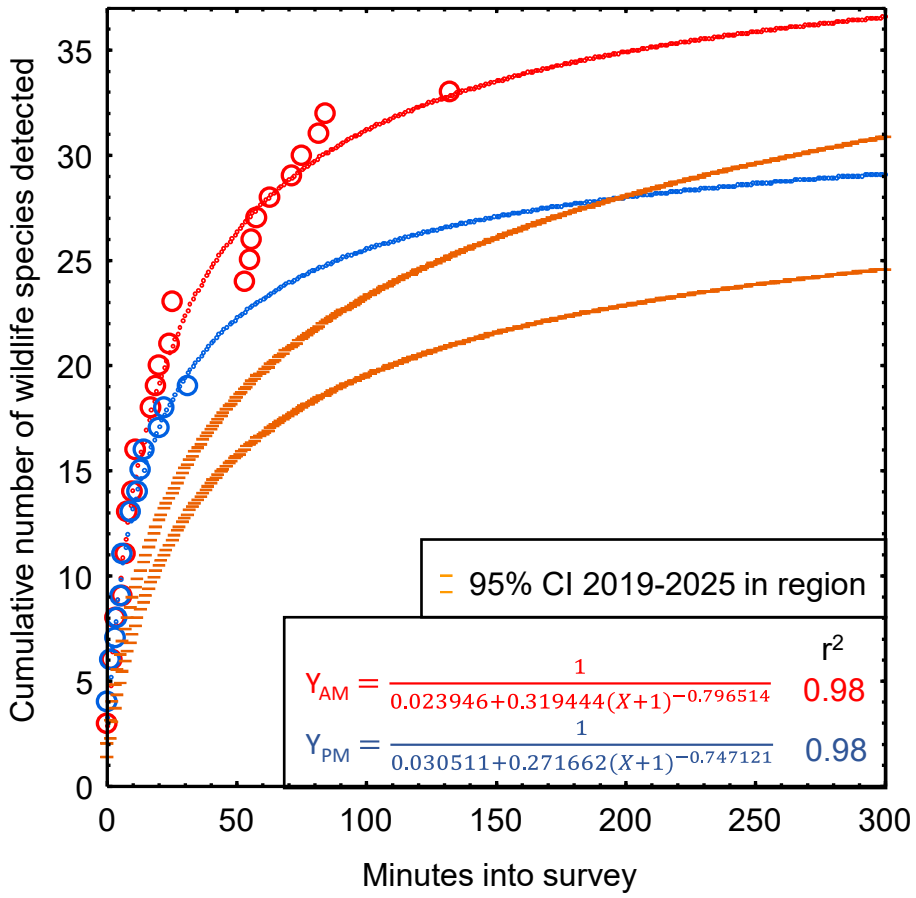

Figure 1. *Actual and predicted relationships between the numbers of vertebrate wildlife species detected and the elapsed survey time based on Noriko's visual-scan surveys at the project site on 28 and 29 March 2026. Note the confidence interval (orange) applies only to the morning survey (red line).*

Unknown are the identities of the species Noriko missed, but the species that Noriko did and did not detect on composed only a fraction of the species that would occur at the project site over the period of a year or longer. This is because many species are seasonal in their occurrence, some require more survey effort because they are highly cryptic, and the members of other species would visit the site only periodically while patrolling large home ranges. Surveys on only two days cannot possibly detect all of the species of the local wildlife community.

At least a year's worth of surveys would be needed to more accurately report the number of vertebrate species that occur at the project site, but I only have Noriko's one survey. However, by use of an analytical bridge, a modeling effort applied to a large, robust data set from a research site can predict the number of vertebrate wildlife species that likely make use of the site over the longer term. This analytical bridge draws inference from the pattern of species detections more than it does from the research site, and I note that the pattern, i.e., rate, of species detections is consistent from site to site.

As part of my research, I completed a much larger survey effort across 167 km² of annual grasslands of the Altamont Pass Wind Resource Area, where from 2015 through 2019 I

performed 721 1-hour visual-scan surveys, or 721 hours of surveys, at 46 stations. I used binoculars and otherwise the methods were the same as the methods I and other consulting biologists use for surveys at proposed project sites. At each of the 46 survey stations, I tallied new species detected with each sequential survey at that station, and then related the cumulative species detected to the hours (number of surveys, as each survey lasted 1 hour) used to accumulate my counts of species detected. I used combined quadratic and simplex methods of estimation in Statistica to estimate least-squares, best-fit nonlinear models of the number of cumulative species detected regressed on hours of survey (number of surveys) at the station: $\hat{R} = \frac{1}{1/a+b\times(Hours)^c}$, where $\hat{R}$ represented cumulative species richness detected. The coefficients of determination, r^2, of the models ranged 0.88 to 1.00, with a mean of 0.97 (95% CI: 0.96, 0.98); or in other words, the models were excellent fits to the data.

I projected the predictions of each model to thousands of hours to find predicted asymptotes of wildlife species richness. The mean model-predicted asymptote of species richness was 57 after 11,857 hours of visual-scan surveys among the 46 stations of my research site. I also averaged model predictions of species richness at each incremental increase of number of surveys, i.e., number of hours (Figure 2). On average I would have detected 17.6 species over my first 5.15 hours of diurnal surveys at my research site in the Altamont Pass (5.15 hours to match the 5.15 hours Noriko surveyed during daylight hours at the project site), which composed 30.9% of the predicted total number of species I would detect with a much larger survey effort at the research site. Given the example illustrated in Figure 2, the 34 vertebrate wildlife species Noriko detected in her 5.15 hours of daylight survey at the project site likely represented 30.9% of the species to be detected after many more visual-scan surveys over another year or longer. With many more repeat surveys through the year, Noriko would likely detect $34/0.309 = 110$ species of vertebrate wildlife in daylight surveys at the site. Assuming Noriko's ratio of special-status to non-special-status species was to hold through the detections of all 110 predicted species, then continued daylight surveys would eventually detect 16 special-status species of vertebrate wildlife.

Because my prediction of 110 species of vertebrate wildlife, including 16 special-status species, is derived from daytime visual-scan surveys, and would detect few nocturnal mammals such as bats, the true number of species composing the wildlife community of the site must be larger. Proof of this in Noriko's brief nocturnal survey in which she added 8 species of vertebrate wildlife to her tally, including 2 special-status species of bats. Noriko's reconnaissance survey should serve only as a starting point toward characterization of the site's wildlife community, but it certainly cannot alone inform of the inventory of species that use the site. More surveys are needed than her one survey to produce an inventory the project site's wildlife community. Nevertheless, the large number of species I predict at the project site is indicative of a relatively species-rich wildlife community that warrants a serious survey effort.

Considering the number of species – and the number of special-status species – yet to be detected, there is at least a fair argument that can be made for the need to prepare and EIR to accurately characterize the wildlife community as part of the existing

environmental setting, which is needed to predict potential project impacts and to formulate an effective mitigation strategy.

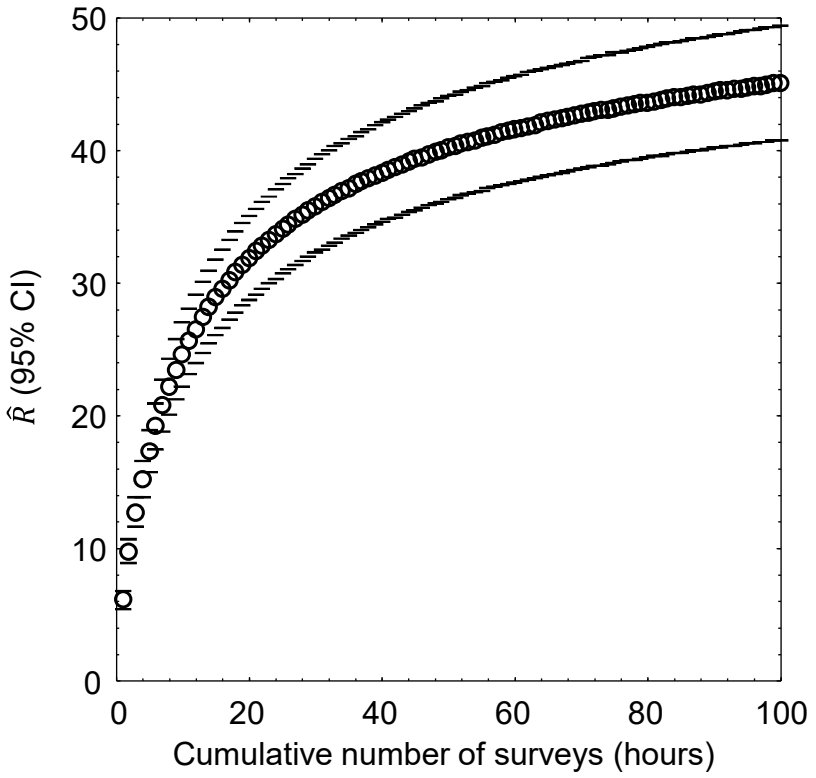

Figure 2. *Mean (95% CI) predicted wildlife species richness, $\hat{R}$, as a nonlinear function of hour-long survey increments across 46 visual-scan survey stations across the Altamont Pass Wind Resource Area, Alameda and Contra Costa Counties, 2015–2019. Note that the location of the study is largely irrelevant to the utility of the graph to the interpretation of survey outcomes at the project site. It is the pattern in the data that is relevant, because the pattern is typical of the pattern seen elsewhere.*

MISCHARACTERIZATION OF THE EXISTING ENVIRONMENTAL SETTING

CEQA's primary objectives should guide the design and conduct of CEQA review. Four of CEQA's primary objectives are to (1) accurately characterize the existing environmental setting, (2) disclose potential project impacts to the public and decision-makers, (3) foster public participation with decision-making over proposed projects, and (4) identify issues and feasible alternative mitigation measures to minimize environmental impacts. The first objective is essential to the other three, because an accurate understanding of the existing environmental setting is needed to predict impacts, provide the public with the means to meaningfully participate with issues of importance, and effectively strategize mitigation and project alternatives (Figure 3). For biological resources, essential information includes the species composition of the plant and wildlife communities, key ecological interactions, identification of ecological keystone species, determining the presence of special-status species or their habitats, and identifying risk factors that could result in significant direct, indirect and cumulative impacts should the project go forward.

The public and decision-makers need to know which species are susceptible to harm potentially caused by the project and its associated activities, and which are known to be vulnerable to harm once exposed to the environmental changes brought by the project. For these reasons, field studies are needed to identify as many of the species that occur

on the project site as reasonably feasible, and to otherwise examine the environmental conditions for their likelihood to support species that are not detected, otherwise known as "habitat assessment." A review of species occurrence records – also known as "desktop review" – is needed to identify the other species that potentially occur on the site – a process that is also referred to as "habitat assessment." Because habitat assessments that are based on either or both field study and desktop review are prone to uncertainty, emphasis needs to be directed to adequate field study to reduce the pool of species subjected to habitat assessment, thereby weighing the review more towards certainty. Appropriately weighted reviews are less susceptible to speculation over species occurrence likelihoods. For this reason, protocol-level detection surveys have been formulated for numerous special-status species of plants and wildlife, and otherwise best scientific practices are needed to provide a reasonable likelihood of detection of species that truly occur on the project site. The negative findings of a properly conducted detection survey are the only findings that can support a determination of species absence.

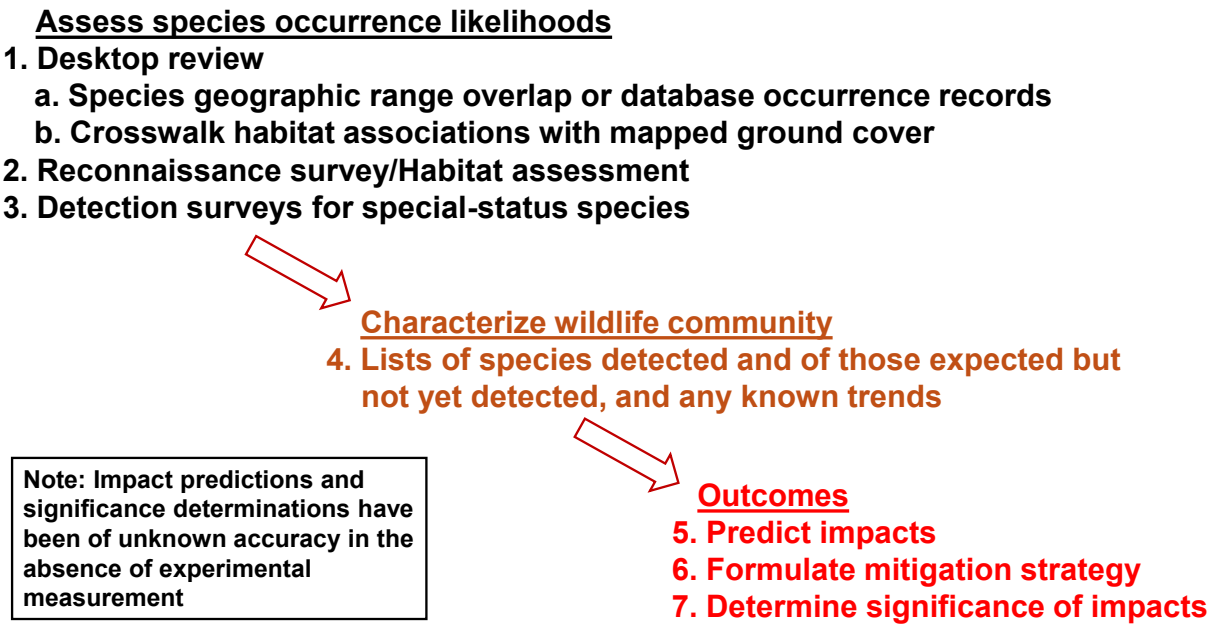

Figure 3. *General flow of information from its gathering through characterizing the existing environment to predicting impacts and their significance.*

Even among reviews founded on the best of field studies, there is always uncertainty over some of the determinations of species occurrences. The uncertainties of habitat assessments need to be managed to achieve CEQA's primary objectives. This means that the methodological details of both the field studies and desktop review need to be carefully and thoroughly reported, and it means that results need to be reported in context of their uncertainties. For example, the reporting of having detected 10 species in a reconnaissance survey is nearly meaningless without also reporting the numbers of species found in surveys of similar methods and effort levels, and the reporting of the failure to detect a given species is nearly entirely meaningless without also reporting the likelihood that species would be detected given the survey methods and effort level. The

same is true of desktop review; that is, there should be some means of validating habitat assessments based on the thousands of habitat assessments that have already been conducted in support of CEQA reviews. If industry standards in environmental review are to be credible, then they must include the use of the comparative method.

In the case of the proposed project, the IS/MND fails to explain how or why the steps taken to characterize the ecological community relate to CEQA's primary objectives. Additionally, the ecological community is inaccurately characterized as composed of only those species detected in reconnaissance surveys or deemed likely to occur based on desktop review of occurrence records. Furthermore, the IS/MND reports nothing about the uncertainties of Psomas's (2024) findings, which vastly diminishes the accuracy of the characterization of the existing environmental setting.

Environmental Setting informed by Field Surveys

Psomas (2024) deployed two biologists to record plant and wildlife species and map vegetation as a general site assessment on 19 September 2022. Psomas does not explain how its general site assessment contributes to CEQA's objectives, but it is my opinion that each documentation of a species detected in a survey lessens the uncertainty of the species composition of the local ecological community, and it hence improves the accuracy of the characterization of the environmental setting. However, more information needs to be reported so that survey findings can be considered in an appropriate comparative context to provide perspective and to address uncertainty that such findings as the number of species detected represent the true number of species that occur on the site. Psomas (2024) fails to report its survey start time, its survey duration, and how its findings compare to other similar surveys in the region.

Psomas (2024) compiles all wildlife species detections into a single list that fails to identify which species were detected during the reconnaissance survey. Comparing the Wildlife Compendia between Psomas (2024) and Psomas (2023a), it is apparent that most of the species in Psomas's (2024) Wildlife Compendium (app. A-2) were detected by the biologists who conducted focused burrowing owl surveys (Psomas 2023a), and two more were detected by biologists who conducted fairy shrimp surveys. The number of species detected solely during the reconnaissance survey is unreported.

Psomas (2024) reports 31 species of vertebrate wildlife were detected across all surveys. Four of these species are special-status species, despite the IS/MND's claim that "No candidate, sensitive, or special status species are expected to occur on the Proposed Project Site due to lack of suitable habitat and/or because they were absent during focused surveys." In comparison, Noriko detected 42 species of vertebrate wildlife over a much shorter survey effort. Psomas detected 13 species that Noriko did not, but Noriko detected 24 species that Psomas did not, and ultimately Noriko's survey effort brings the total number of vertebrate wildlife species detected on the site to 55, which is nearly double the number Psomas (2024) reports. A comparison between Psomas's and Noriko's surveys reveals that the wildlife community depicted by Psomas (2024) is nowhere close to accurate, and that it indicates that additional surveys would further increase the number of species known to the site.

Psomas (2024) documented 1.36 times number of vertebrate wildlife species as the average among surveys reported by consulting biologists at California project sites, and Noriko detected 1.39 times the number we average in our surveys of the same sites (Figure 4). Psomas (2024) documented about the same number of special-status species vertebrate wildlife as the average among surveys reported by consulting biologists at California project sites, and Noriko detected about the same number we average in our surveys of the same sites (Figure 5).

Two comparative contexts are needed to fully disclose the meanings of survey findings in the IS/MND. The first is to contextualize the survey findings relative to the survey effort, because otherwise it is misleading to insinuate that the species detected were definitive of the wildlife community. As Figures 1 and 2 demonstrate, additional surveys contribute to an increasingly more accurate characterization of the wildlife community, but eventually to a point at which the species inventory would be obtained. Quicker progress toward an accurate characterization of the wildlife community can be achieved by adding nocturnal surveys as well as specialized surveys for detecting bats, small mammals, reptiles and amphibians. However the surveys are done, it is imperative to compare survey findings to the findings from other surveys and their associated survey attributes to provide interpretive context such as to quantify the uncertainty of the findings, or alternatively to understand whether the findings fall within the expected range of findings given the survey methods and level of effort. If no such comparison is possible, then the lack of comparability should be discussed as a survey limitation.

Another example of how once can contextualize survey findings can be found in Figure 6, which compares Noriko's findings to hundreds of other survey results at other proposed project sites, developed sites, and at relatively intact "references sites," but it does so relative to the survey effort. This approach is more informative than the other comparative contexts because it factors in survey effort. Because Psomas (2024) fails to report key survey attributes, I cannot compare its reconnaissance survey findings to past consultant findings relative to survey effort.

The second comparative context is to assess the probabilities of detection considering the survey effort of each special-status species, whether detected or not. Psomas (2024) reports having failed to detect any special-status species of wildlife, but failures to detect special-status species can mean that the survey was inadequate. Each species presents survey personnel with a unique range of detection probabilities based on the species' natural history, its behavior patterns, survey effort, the study area's distance from known activity areas of the species, and the levels of skill of survey personnel. Many animals maintain home ranges that are larger than most project sites, and they periodically shift their foraging activities to various parts of their home range, hence occurring on a particular site only periodically. To detect these species, survey personnel must be at the site on the same date and time as the one or more members of the species. The probability of detection of any given species during any given survey is less than 100%, and for many species that truly occur on a given site, it is closer to 0%.

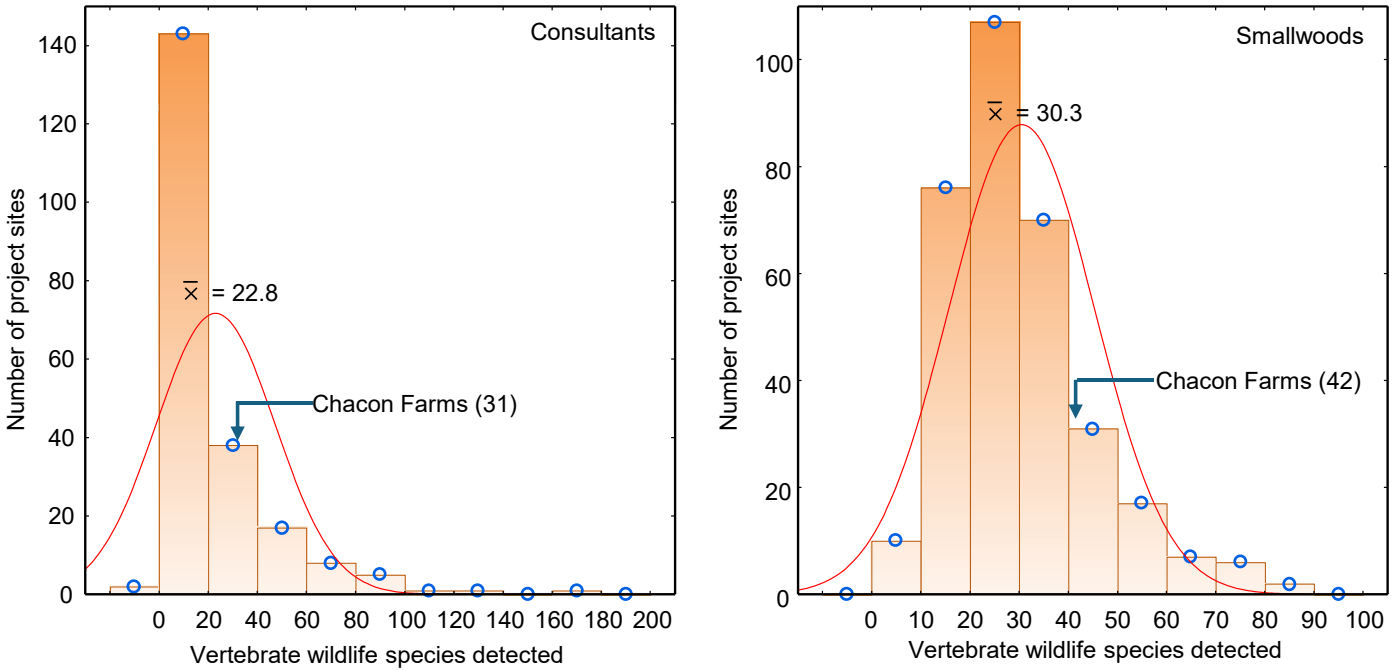

Figure 4. *Frequency distribution of the number of vertebrate wildlife species detected by consulting biologists (left graph) and by me and Noriko (right graph) among project sites surveyed in support of environmental reviews in California.*

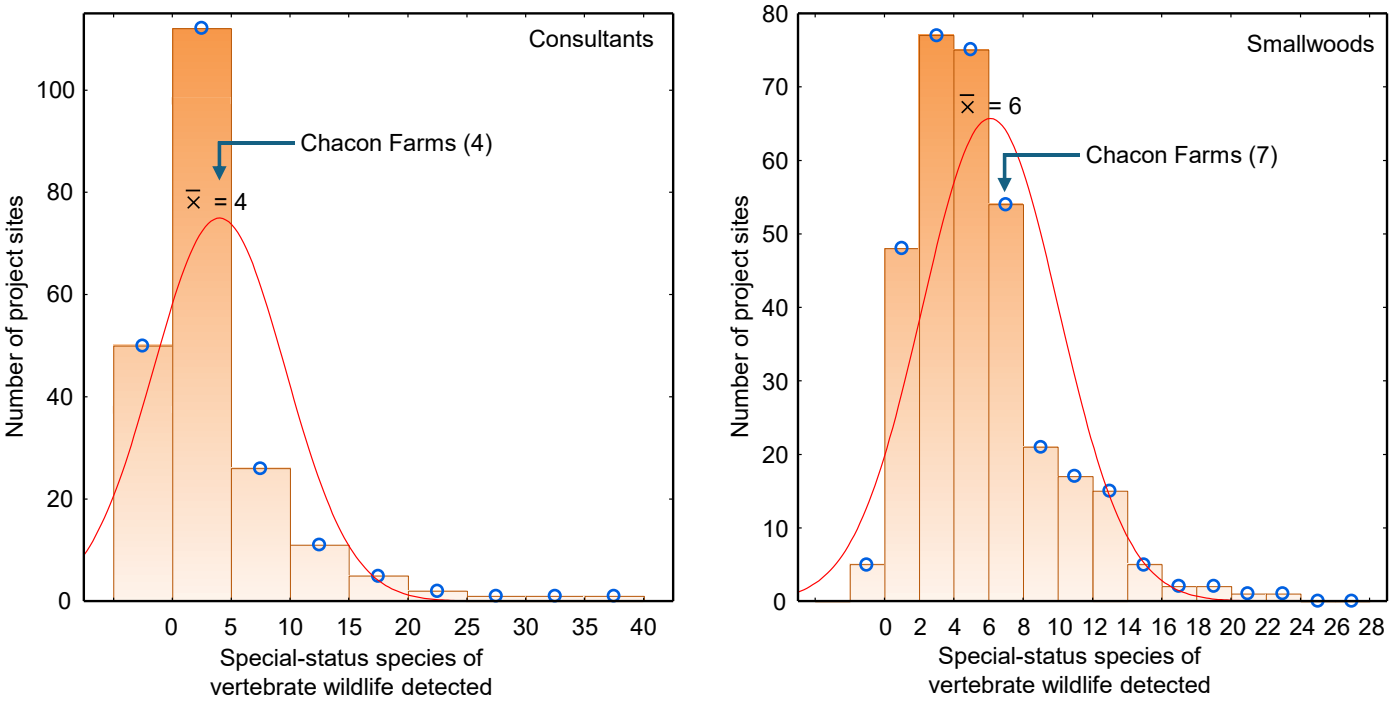

Figure 5. *Frequency distribution of the number of special-status species of wildlife detected by consulting biologists (left graph) and by me and Noriko (right graph) among project sites surveyed in support of environmental reviews.*

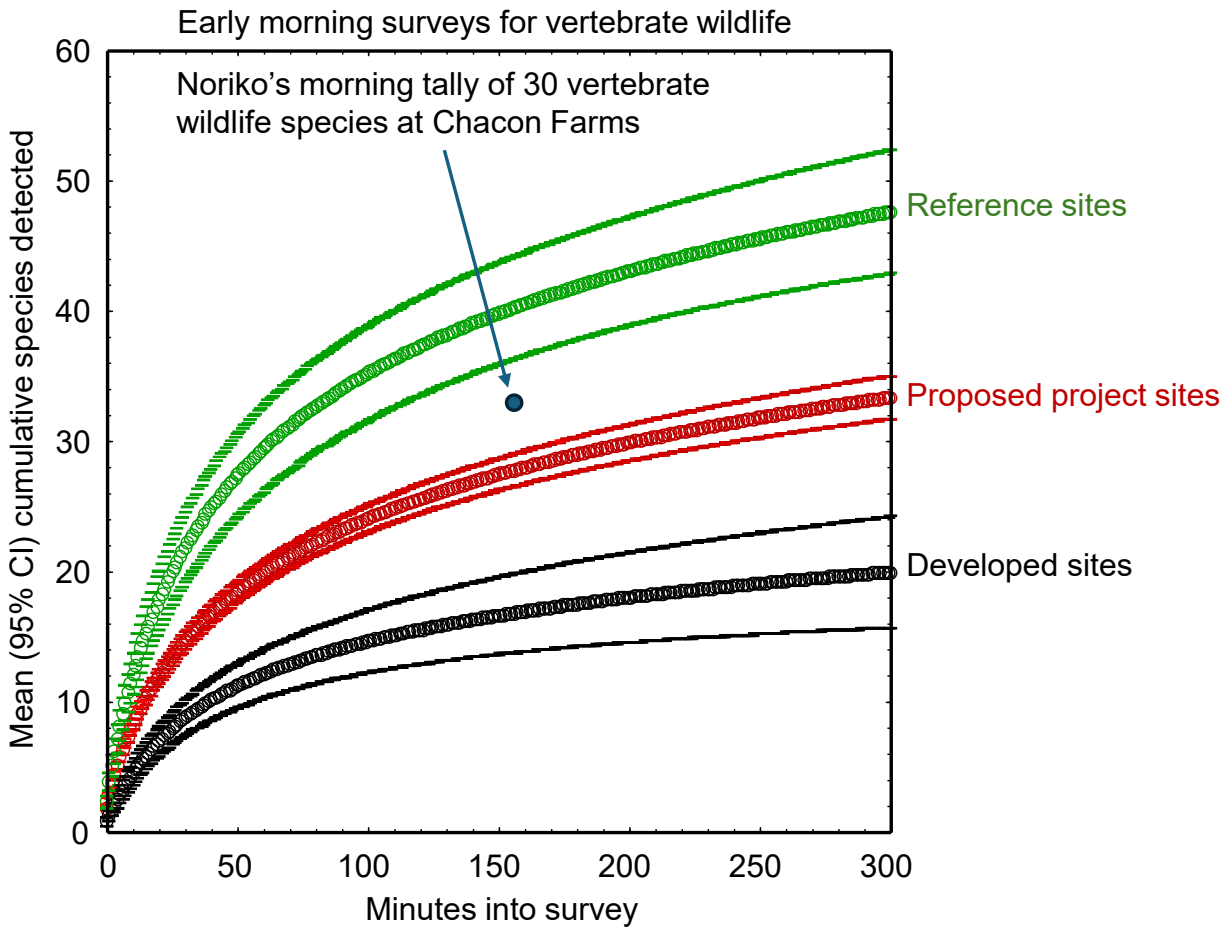

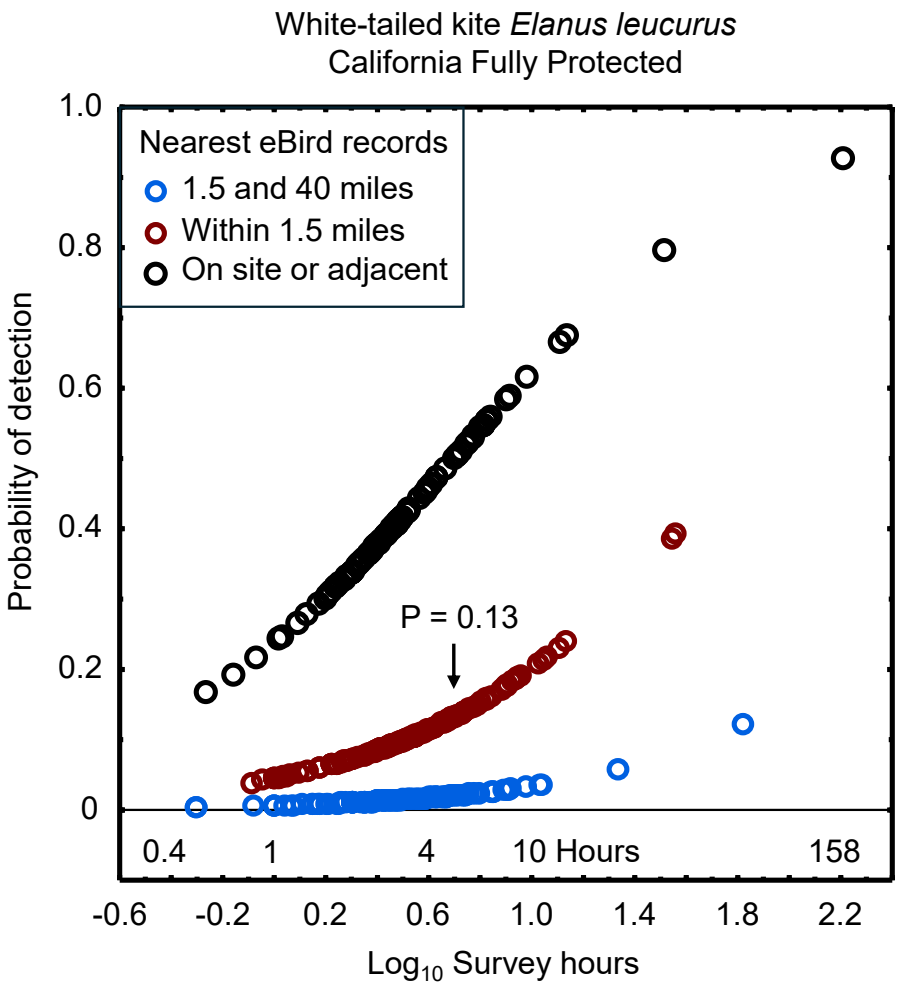

Figure 6. *Noriko Smallwood's survey findings at the Chacon Farms Project site relative to our survey findings at other project sites (red), at developed sites (black), and at more pristine sites that we survey as reference sites (green). Noriko's findings exceed the upper bound of the 95% confidence interval based on the results of hundreds of surveys at project sites, and they approach the lower bound of the 95% CI from many surveys at reference sites.*

For example, white-tailed kite was detected by neither Psomas or Noriko, but among our hundreds of surveys at project sites, Noriko and I have found white-tailed kites in environments similar to the Chacon Farms site. Based on hundreds of surveys within the geographic range of white-tailed kite, Noriko's 5.15 hours of daylight survey combined with the knowledge that white-tailed kite has been documented within 1.5 of the project site afforded Noriko a 13% likelihood of detection of white-tailed kite (Figure 7). Noriko would need to conduct many more surveys to accumulate a reasonable likelihood of detecting white-tailed kite, but the patterns of our findings in our many other surveys depicted in Figure 7 reveal that it is unlikely that the white-tailed kite is absent from the project site. This use of the comparative method leads to a fundamentally different way of interpreting survey results than is expressed in Psomas (2024) and the IS/MND, and it provides for more accurate disclosure of potential project impacts.

Figure 7. *Probability of detection of white-tailed kite as a function of survey effort and proximity of occurrence records to a project site, based on hundreds of reconnaissance surveys we completed 2019–2024.*

This second comparative context is very important because it is the basis for the formulation of detection survey protocols. Experienced biologists are aware of survey limitations due to ranges of variation in the activity periods, levels of crypticity, and periodic movement patterns of wildlife species, and due to variation in the skill and commitment of survey personnel. This second comparative context acknowledges that the occurrence likelihood of a species on a particular site is rarely if ever zero, so long as the site is within the species' geographic range and it provides habitat. This second comparative context reveals that a determination of zero likelihood of occurrence is typically indicative of insufficient survey effort. A common goal of detection survey protocols is to support absence determinations with a survey effort that should have resulted in a detection if the species had been present at the time of the surveys, but it does not prove that the species is always absent from the site. This second comparative context and its implications should not be neglected in CEQA review, but it is neglected in the case of the IS/MND prepared for this project.

Psomas (2023a) conducted a detection survey for burrowing owls, and it appears to have complied with the appropriate survey guidelines (County of Riverside 2006). In my opinion, the County of Riverside (2006) guidelines are not as reliable as are the California Department of Fish and Wildlife's (CDFW 2012) guidelines, but they are the

guidelines for properties within the Western Riverside Multiple Species Habitat Conservation Plan Area. Perhaps more importantly, it has been three years since the surveys of Psomas (2023a). Although Psomas's surveys were negative for burrowing owls, it might very well be the case that burrowing owls are present on the project site in 2026. Breeding-season surveys should be repeated, and my recommendation would be to implement the CDFW (2012) survey guidelines.

Psomas (2023b) conducted focused surveys for rare plants in 2023 to determine presence or absence of rare plants. Again, absence determinations based on detection surveys only apply to the timespan of the surveys, and they cannot be relied upon three years hence. The surveys need to be repeated, but this time there needs to be full use of reference populations, because the 2023 survey did not make appropriate use of reference populations (see CDFW 2018).

No detection surveys were conducted for Crotch's bumble bee (see CDFW 2023) nor for any other species other than fairy shrimp. The appropriate surveys were not implemented for various other types of wildlife, hence leaving conclusions in Psomas (2024) unfounded. For example, Psomas (2024) reports that no mammal species were detected during its surveys, but it does not caveat this finding with the fact that no acoustic surveys were conducted for bats, and no live-trapping was conducted for small mammals. Noriko detected bats because she implemented the appropriate survey method for doing so. I must also point out that Psomas actually did detect mammals, as Psomas (2023a) reportedly saw scattered California ground squirrel burrows on the project site. In another example, Psomas (2024) reports "No amphibian species were observed during the survey," but Noriko did observe amphibians because she surveyed at the right time of day to do so. Psomas (2024) reports survey results as if they are definitive, but they are not.

Lastly, Noriko detected tricolored blackbird on the project site (Photo 13). The tricolored blackbird is listed as Threatened under the California Endangered Species Act. It is a covered species under the Western Riverside Multiple Species Habitat Conservation Plan (MSHCP), but as is apparent in the tricolored blackbird monitoring reports, the MSHCP is failing to conserve the tricolored blackbird. As of 2022, most of the activity of tricolored blackbirds in Riverside County had been reduced to the Mystic Lake/San Jacinto Core Area, but as of 2025 Colibri (2025) found only one breeding colony in Riverside County, and reports that the breeding population in this County is nearing extirpation. Noriko's detection of this species on the project site is highly significant, but the IS/MND makes no mention of the tricolored blackbird.

Environmental Setting informed by Desktop Review

The IS/MND does not assess the occurrence likelihoods of special-status species of wildlife. The habitat assessment of Psomas (2024) did not include a habitat assessment. The literature was reportedly reviewed, but no literature sources are cited. Data bases of species occurrence records were reportedly reviewed, but none of the results of database queries are reported. Specifically, Psomas (2024) reports having queried the California

Natural Diversity Data Base (CNDDB) for special-status species occurrence records in 9 USGS 7.5' Quadrangles, but answers to the queries are not reported.

Psomas (2024:3) reports, "The majority of the site is considered low quality for wildlife due to the lack of native vegetation and surrounding immediate vicinity." However, habitat quality is a term that represents population performance measured by such metrics as nest success, fecundity, and survivorship. None of these or any related metrics have been measured for any species on the project site. Therefore, Psomas lacks the basis for considering the project site to be of low quality for wildlife. Considering the number of species documented on the site, and the abundance of some of them, e.g., California gull, it seems unlikely that a general conclusion of low habitat quality applies to the project site. Nonetheless, no conclusion about habitat quality should be made without measuring population performance.

In my assessment based on a database review and site visits, 153 special-status species of wildlife are known to occur near enough to the site to warrant analysis of occurrence potential (Table 2). Not all these species should be expected to occur at the project site, but each of them should be given a closer look to determine occurrence likelihoods and whether additional surveys are needed, or implementation of detection surveys, or whether it would be reasonable to assume presence. Of these 153 species, 12 were recorded on or just off the project site (on the fringe), and another 42 (27%) have been documented within 1.5 miles of the site (Very close), another 24 (16%) between 1.5 and 4 miles (Nearby), and another 67 (44%) between 4 and 30 miles (In region). Half (51%) of the special-status species in Table 2 have been reportedly seen within 4 miles of the project site. The site therefore supports at least 12 special-status species of wildlife, and it carries the potential for supporting many more special-status species of wildlife based on the proximities of recorded occurrences. Evidence certainly suggests that habitat assessments are needed for these species.

Of the 153 special-status species of wildlife in Table 2, only 56 (36.6%) are covered by the MSHCP. The mitigation strategy of the MSHCP was not formulated to mitigate project impacts on 97 (63.4%) of the special-status species of wildlife in Table 2. Of the 56 covered species in Table 2, 4 are known to the project site and another 24 have been documented within 1.5 miles, so half the covered species are undoubtedly vulnerable to project impacts. Of the 97 special-status species in Table that lack MSHCP coverage, 8 are known to the project site, 18 have been documented within 1.5 miles, and another 12 have been documented between 1.5 and 4 miles of the site. Of these species without coverage, 39% would be vulnerable to project impacts, including at least 8 that are known to the site. Paying the MSHCP mitigation fee would not address the conservation needs of many special-status species at issue.

Table 2. *Occurrence likelihoods of special-status species of wildlife at or near the project site, according to eBird or iNaturalist records (https://eBird.org, https://www.inaturalist.org), and survey findings On site, or records Very close (≤1.5 miles of the site), Nearby (1.5 – 4 miles), In region (4 – 30 miles), and In range, i.e., the species' geographic range overlaps the site. Entries in bold font identify species that Noriko detected during her site visit or that one of us detected at a nearby site.*

Mischaracterization of the Wildlife Community

Psomas (2024) reports on a field survey and a desktop review having been completed, but the field survey was much too cursory, and its results are interpreted without any context to survey results from elsewhere, and its desktop review is nearly entirely undocumented. Psomas (2024) concludes that the project site is of low habitat quality to wildlife, but it provides no basis for this conclusion, and the conclusion is readily refuted by Noriko Smallwood's survey. Psomas's conclusion of low habitat quality is only speculative, which is inappropriate for precious or rare resources such as special-status species (National Research Council 1986). The true wildlife community remains to be described with sufficient accuracy. Without a more accurate characterization of the wildlife community, the basis is inadequate for predicting impacts and formulating appropriate mitigation strategies.

Considering the deficiencies in the survey effort directed to the project site, the deficiencies in reporting of survey methods and the reporting of results, and the inadequacy of the desktop review to analyze the occurrence likelihoods of special-status species, there is at least a fair argument that can be made for the need to prepare an EIR to accurately characterize the wildlife community on the project site as a suitable baseline from which to predict project impacts and to formulate an appropriate mitigation strategy.

BIOLOGICAL IMPACTS ASSESSMENT

The impacts analysis in CEQA review involves prediction. Impact predictions are necessary in environmental review because measuring a project's impacts directly could not happen until after the impacts occur, and the timing of this type of measurement would come too late for formulating a mitigation strategy or deciding on a project alternative. As noted earlier, the accuracy of the predictions of impacts and their significance ultimately relies on the degree of accuracy in the characterization of the existing environmental setting (Figure 3). Prediction accuracy also relies on experience, of which development projects subjected to CEQA review have been made amply available (Figure 8). CEQA prohibits the use of speculation to predict that potential project impacts would be less than significant (see CEQA Guidelines section 15145. SPECULATION), so it is experience that must be used. The type of experience proven most effective, and therefore most amenable to achieving CEQA's primary objectives, is scientific inference, as generally depicted in Figure 8. Scientific inference can be drawn from scientific studies or from the many other projects that have undergone CEQA review. The comparative method enables the use of scientific inference to predict impacts and to predict the efficacies of mitigation strategies, the latter of which should be also amply available in the record.

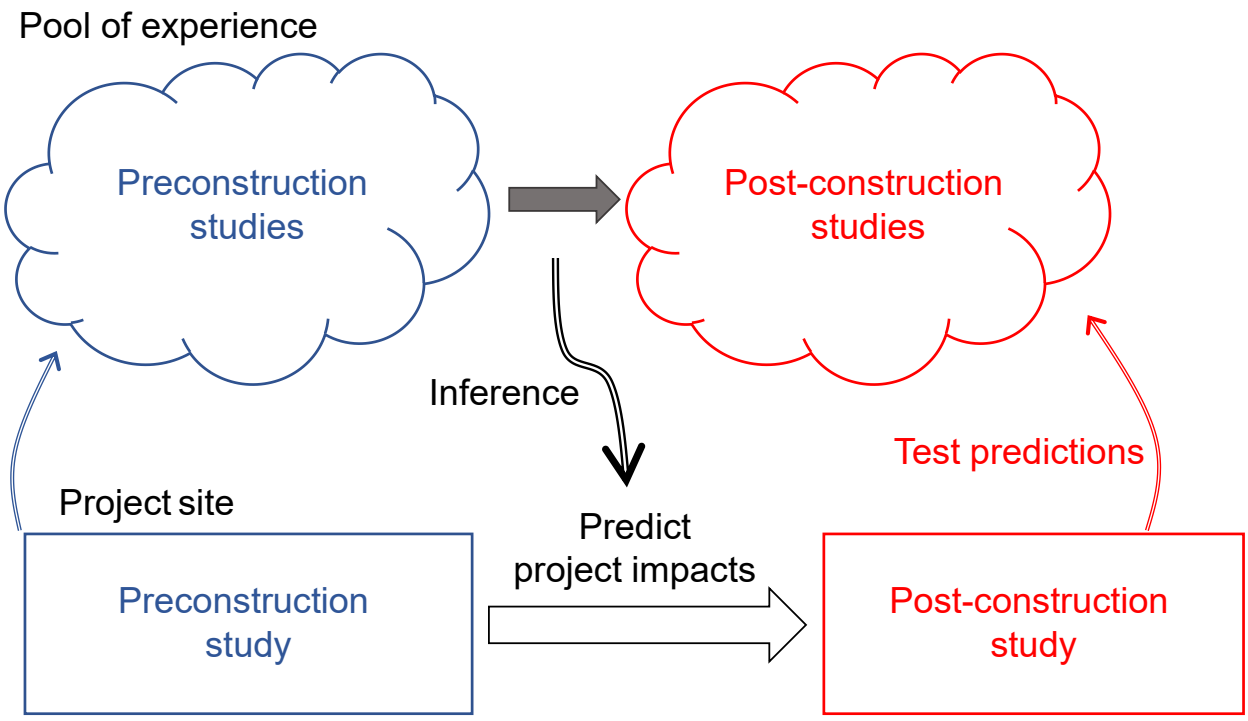

Figure 8. *A framework for arriving at predicted project impacts based on experience with other project sites. Ideally, there is a pool of similar projects in similar circumstances where predicted impacts were compared to realized impacts, and into which the proposed project can also contribute to experience.*

In the following, I analyze several types of impacts likely to result from the project, none of which are analyzed adequately by Psomas (2024) or the IS/MND, and some of which are not analyzed at all.

REDUCED PRODUCTIVE CAPACITY FROM HABITAT LOSS

Habitat loss results in a reduced productive capacity of affected wildlife species. The site is proven to serve as habitat to at least 55 species of vertebrate wildlife which Psomas and Noriko observed on the site, but the number of avian nest sites remains unknown. The surveys that have been conducted on the project site were unsuitable for detecting all bird nests or for estimating total nest density. The alternative method for estimating avian productive capacity is to infer it from estimates of total nest density elsewhere. Noriko and I have completed studies to estimate total avian nest density in various environments, but not in an environment that would match the project site.

Noriko estimated an average 3.22 nests/acre among three of her grassland study sites in southern California, two of which were in nearby Murrieta. Assuming half this average on the agricultural portion of the project site, and 1.5 times her average on the remainder of the site, I estimate 145 nest sites on the project site. Assuming 1.39 broods per nest site based on a review of 322 North American bird species, which averaged 1.39 broods per year, then I estimate 202 nest attempts per year. Assuming Young's (1948)

study site typifies bird productivity of 2.9 fledged birds per nest attempt, then I predict 586 fledglings/year at the project site.

The loss of 145 nest sites and 202 nest attempts per year would qualify as significant impacts that have not been analyzed in the IS/MND. But the impacts would not end with the immediate loss of nest sites. The reproductive capacity of the site would be lost. The project would prevent the production of 586 fledglings per year. Assuming an average bird generation time of 4 years, the lost capacity of both breeders and annual fledgling production can be estimated from an equation in Smallwood (2022): {(nests/year × chicks/nest × number of years) + (2 adults/nest × nests/year) × (number of years ÷ years/generation)} ÷ (number of years) = 659 birds per year lost to California.

The loss of 659 birds per year would be a loss of significant habitat value that is currently provided by the project site. Most if not all these birds are protected by the federal Migratory Bird Treaty Act and by California's Migratory Bird Protection Act, both of which are intended to most strongly protect breeding migratory birds. The loss of 659 birds per year would easily qualify as an unmitigated significant impact.

INTERFERENCE WITH WILDLIFE MOVEMENT

One of CEQA's principal concerns regarding potential project impacts is whether a proposed project would interfere with wildlife movement in the region. Unfortunately, this concern has not motivated any serious analysis of whether or how the project would interfere with wildlife movement in the region. Psomas (2024) and the IS/MND rely on speculation, which CEQA prohibits for the purpose of understanding potential project impacts. According to Psomas (2024:3), and repeated in the IS/MND, "The project site is surrounded by development, with suburban development to the north and east, a dairy farm to the south, and construction an additional residential development to the west. Additionally, the project site is not located within a "Core" or "Linkage" area designated by the MSHCP. Wildlife could move locally through the project site and adjacent residential, agricultural, and dairy land. The project site is expected to be used for local movement by urban-tolerant species such as coyote (*Canis latrans*)." The IS/MND adds that coyote could continue to use the project site after development, and "Therefore, there would be no impact on wildlife movement."

Even surrounded by development – it is not, this setting would not rule out the importance of the project site to wildlife movement in the region. In fact, as habitat fragmentation advances, the isolated fragments of habitat that remain can emerge as even more important to the ability of volant species to move across the region, as the fragments provide migrants and long-range dispersers the only stopover opportunities for forage and refuge (Smallwood 2015).

Moreover, some of the birds Psomas and Noriko detected at the project site are migrants, and so are bats that Noriko detected. Two such migrants are cliff swallow and yellow-rumped warbler. The site is obviously important to the movement of at least some species, but Psomas did nothing to measure this movement. Psomas (2024) does not even identify wildlife movement as one of its survey objectives, and it indeed

implemented no study design or program of observations to characterize wildlife movement on or around the project site.

WILDLIFE DEPREDATION BY HOUSE CATS

Considering national trends, it is safe to assume that house cats would be introduced to the project area by residents of the proposed residential units. This is significant because house cats serve as one of the largest sources of avian mortality in North America (Dauphiné and Cooper 2009, Blancher 2013, Loss et al. 2013, Loyd et al. 2017). Loss et al. (2013) estimated 139 million cats in the USA in 2013 (range 114 to 164 million), which killed an estimated 16.95 billion vertebrate wildlife annually (range 7.6 to 26.3 billion). In 2012 there were 0.44 house cats per human in the USA, and 122 vertebrate animals were killed per cat, free-ranging members of which killed disproportionately larger numbers of vertebrate wildlife. The IS/MND predicts 1,453 new residents in 419 single-family homes. The above rates of cat ownership applied to this number of new residents would predict 639 new cats, which based on the findings of Loss et al. (2013) would kill 77.958 vertebrate wildlife per year.

House cats also contribute to downstream loading of *Toxoplasma gondii*. According to a UC Davis wildlife health research program, "*Toxoplasma gondii is a parasite that can infect virtually all warm-blooded animals, but the only known definitive hosts are cats – domesticated and feral house cats included. Cats catch the parasite through hunting rodents and birds and they offload it into the environment through their feces… and …rain that falls on cement creates more runoff than rain that falls on natural earth, which contributes to increased runoff that can carry fecal pathogens to the sea*" (The original link is no longer active, but the quote came from the program described at: https://whc.vetmed.ucdavis.edu/programs-projects/ca-conservation/sea-otter).

Impacts on wildlife from the introduction of house cats into the environment would be highly significant, and yet these impacts are not considered in the IS/MND. An obvious mitigation measure would be to constrain house cat ownership such as requiring cats to remain indoors.

TRAFFIC IMPACTS ON WILDLIFE

The IS/MND neglects to address one of the project's most obvious, substantial impacts on wildlife, and that is wildlife mortality and injuries caused by project-generated traffic. Project-generated traffic would endanger wildlife that must, for various reasons, cross roads used by the project's traffic (Photos 20—23), including along roads far from the project footprint but which would nevertheless by traversed by automobiles head to or from the project's building. Vehicle collisions have accounted for the deaths of many thousands of amphibian, reptile, mammal, bird, and arthropod fauna, and the impacts have often been found to be significant at the population level (Forman et al. 2003). Across North America traffic impacts have taken devastating tolls on wildlife (Forman et al. 2003). In Canada, 3,562 birds were estimated killed per 100 km of road per year (Bishop and Brogan 2013), and the US estimate of avian mortality on roads is 2,200 to

8,405 deaths per 100 km per year, or 89 million to 340 million total per year (Loss et al. 2014). Local impacts can be more intense than nationally.

Photos 20 and 21. *A desert cottontail runs across the road in Murietta, California (top),* and a *great-tailed grackle crosses a road in the Imperial Valley (bottom).*

Photos 22 and 23. *Raccoon killed on Road 31 just east of Highway 505 in Solano County (left; photo taken on 10 November 2018), and California kingsnake killed by a vehicle on a rural road in El Dorado County in 2024.*

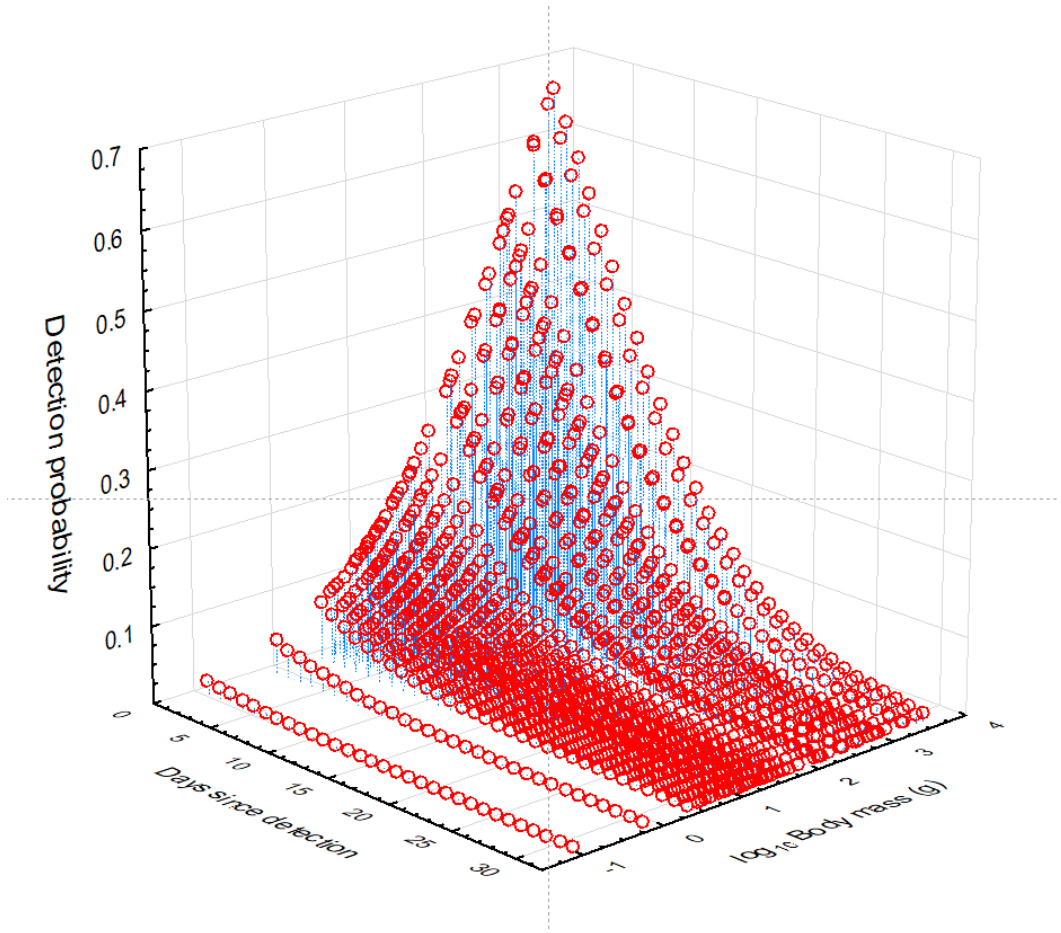
The nearest study of traffic-caused wildlife mortality was performed along a 2.5-mile stretch of Vasco Road in Contra Costa County, California. Fatality searches in this study found 1,275 carcasses of 49 species of mammals, birds, amphibians and reptiles over 15 months of searches (Mendelsohn et al. 2009). This fatality number needs to be adjusted for the proportion of fatalities that were not found due to scavenger removal and searcher error. This adjustment is typically made by placing carcasses for searchers to find (or not find) during their routine periodic fatality searches. This step was not taken at Vasco Road (Mendelsohn et al. 2009), but it was taken as part of another study next to Vasco Road (Brown et al. 2016). Brown et al.'s (2016) adjustment factors for carcass persistence resembled those of Santos et al. (2011). Also applying searcher detection rates from Brown et al. (2016), the adjusted total number of fatalities was estimated at 9,462 animals killed by traffic on the road. This fatality number projected over 1.25 years and 2.5 miles of road translates to 3,028 wild animals per mile per year. In terms comparable to the national estimates, the estimates from the Mendelsohn et al. (2009) study would translate to 188,191 animals killed per 100 km of road per year, or 22 times that of Loss et al.'s (2014) upper bound estimate and 53 times the Canadian estimate. An analysis is needed of whether increased traffic generated by the project site would similarly result in local impacts on wildlife.

For wildlife vulnerable to front-end collisions and crushing under tires, road mortality can be predicted from the study of Mendelsohn et al. (2009) as a basis, although it would be helpful to have the availability of more studies like that of Mendelsohn et al. (2009) at additional locations. My analysis of the Mendelsohn et al. (2009) data resulted in an estimated 3,028 animals killed per mile along a county road in Contra Costa County. The estimated numbers of fatalities were 1.75% birds, 26.4% mammals (many mice and pocket mice, but also ground squirrels, desert cottontails, striped skunks, American badgers, raccoons, and others), 67.4% amphibians (large numbers of California tiger salamanders and California red-legged frogs, but also Sierran treefrogs, western toads, arboreal salamanders, slender salamanders and others), and 4.4% reptiles (many western fence lizards, but also skinks, alligator lizards, and snakes of various species). VMT is useful for predicting wildlife mortality because I was able to quantify miles traveled along the studied reach of Vasco Road during the period of the Mendelsohn et al. (2009), hence enabling a rate of fatalities per VMT that can be projected to other sites, assuming similar collision fatality rates.

Predicting project-generated traffic impacts on wildlife

The IS/MND predicts 4,772,698 VMT for construction worker trips and construction vendor and hauling trips. The IS/MND also predicts an operational daily VMT of 39,298, which multiplied by 365 days = 14,343,770 annual VMT.

During the Mendelsohn et al. (2009) study, 19,500 cars traveled Vasco Road in Contra Costa County daily, so the vehicle miles that contributed to my estimate of non-volant fatalities was 19,500 cars and trucks × 2.5 miles × 365 days/year × 1.25 years = 22,242,187.5 vehicle miles per 9,462 wildlife fatalities, or 2,351 vehicle miles per fatality. This rate divided into the predicted construction VMT predicts 2,030 vertebrate wildlife



fatalities. The Vasco Coad rate of fatalities divided into annual operational VMT predicts 6,101 vertebrate wildlife fatalities per year due to project-generated traffic.

However, some might argue that this prediction relies too much on a study along a road through less-disturbed rangeland that likely supports more non-volant wildlife that is more vulnerable to collision mortality. I would argue that the project-generated traffic would pass through similar rural environments with ample wildlife available to be crushed under automobile tires. Nevertheless, to better represent those reaches of road that are more urban than rural, or that would become more urban with the development of the project, I recently completed my own study of wildlife mortality caused by automobiles along roads that were urban and interfaced between urban and agricultural land uses.

I completed one year of daily pedestrian surveys along 2.7 km (1.713 miles) of local, collector and minor arterial roads in north Davis, California, where I tallied 314 fatalities of 40 species of vertebrate wildlife. Most of the fatalities were small-bodied animals such as Sierran treefrogs, western toads, western fence lizards, 10”- to 16”-long juvenile Pacific gophersnakes, valley gartersnakes and California kingsnakes, as well as bushtits, yellow-rumped warblers, deer mice and California ground squirrels. Most of the animals I found would never have been detected from a moving vehicle, which is why people often underestimate how many wild animals are killed by vehicle traffic.

The animals I found in my study did not include all the animals killed by vehicles on the roads I searched. Many had been removed by scavengers before I could find and count them. (American crows patrol the roads every morning, and so does a large flock of wild turkeys.) Some of the animals are knocked off the road in places where I could never find them, and some were undoubtedly caught and carried away in the grills of vehicles or in tire treads. Most of the Sierran treefrogs disappeared from where I found them within several hours, so daily searches missed many of the fatalities. To adjust for these undetected fatalities, I fit a logit regression model to my fatality finds, all of which transitioned to carcass detection trials after I initially found them. Starting with the first day after each detection, I monitored the carcass trials for 30 days, and I assigned each a body mass estimate based on typical body mass reported in the literature. Predictor variables were days since detection and $\log_{10}$ body mass. The relationship between carcass detection probability and the predictor variables is depicted in Figure 9. My fatality finds adjusted by the model results in an estimate of 2,126 vertebrate wildlife fatalities over 1.713 miles of roads in one year, or 1,241 vertebrate wildlife fatalities/mile/year. This rate is 40.9% of the rate measured at Vasco Road, or an estimated 5,748 vehicle miles per fatality. Applying this urban fatality rate to the predicted construction MT predicts 830 vertebrate wildlife fatalities, and applying it to annual operational VMT predicts 2,495 vertebrate wildlife fatalities per year in the area around the project that is traveled by project-generated traffic.

Figure 9. *Wildlife carcass detection probability is a function of the number of days since discovery and log10 body mass.*

A reasonable range of predicted mortality is therefore 830 to 2,030 vertebrate wildlife caused by construction trips to and from the project site, and 2,495 to 6,101 vertebrate wildlife fatalities per year due to project-generated traffic.

Based on my analysis, the project-generated traffic would cause significant impacts on wildlife. The IS/MND does not address this potential impact, let alone propose to mitigate it. Mitigation measures to improve wildlife safety along roads are available and are feasible, and they need exploration for their suitability with the proposed project. Given the predicted level of project-generated traffic-caused mortality, and the lack of any proposed mitigation, it is my opinion that the proposed project would result in potentially significant adverse biological impacts, and that these impacts would be unmitigated.

BIRD-WINDOW COLLISION MORTALITY

The project would introduce glass windows into an essential portion of avian habitat – that portion of the gaseous atmosphere that is referred to as the aerosphere (Davy et al. 2017, Diehl et al. 2017). The aerosphere is where birds and bats and other volant animals with wings migrate, disperse, forage, perform courtship and where some of them mate. Birds are some of the many types of animals that evolved wings as a morphological adaptation to thrive by moving through the medium of the aerosphere.

The aerosphere is habitat, to which an entire discipline of ecology has emerged to study this essential aspect of habitat – the discipline of aeroecology (Kunz et al. 2008).

Many special-status species of birds have been recorded at or near the aerosphere of the project site. My database review and Noriko's site visit indicate there are 101 special-status species of birds with potential to use the site's aerosphere (Table 1). All the birds represented in Table 1 can quickly fly from wherever they have been documented to the project site, so they would all be within brief flights to the proposed project's windows. Noriko confirmed 48 vertebrate wildlife species on the project site, some of them flying across the site.

Window collisions are often characterized as either the second or third largest source or human-caused bird mortality. The numbers behind these characterizations are often attributed to Klem's (1990) and Dunn's (1993) estimates of about 100 million to 1 billion bird fatalities in the USA, or more recently by Loss et al.'s (2014) estimate of 365-988 million bird fatalities in the USA or Calvert et al.'s (2013) and Machtans et al.'s (2013) estimates of 22.4 million and 25 million bird fatalities in Canada, respectively. The proposed project would impose windows in the airspace normally used by birds.

Glass-façades of buildings intercept and kill many birds, but they are differentially hazardous to birds based on spatial extent, contiguity, orientation, and other factors. At Washington State University, Johnson and Hudson (1976) found 266 bird fatalities of 41 species within 73 months of monitoring of a three-story glass walkway (no fatality adjustments attempted). Prior to marking the windows to warn birds of the collision hazard, the collision rate was 84.7 per year. At that rate, and by not attempting to adjust the fatality estimate for the proportion of fatalities not found, 4,574 birds were likely killed over the 54 years since the start of their study, and that's at a relatively small building façade. Accounting for the proportion of fatalities not found in searches, the number of birds killed by this walkway over the last 54 years would have been about 14,270. And this is just for one 3-story, glass-sided walkway between two college campus buildings.

Klem's (1990) estimate was based on speculation that 1 to 10 birds are killed per building per year, and this speculated range was extended to the number of buildings estimated by the US Census Bureau in 1986. Klem's speculation was supported by fatality monitoring at only two houses, one in Illinois and the other in New York. Also, the basis of his fatality rate extension has changed greatly since 1986. Whereas his estimate served the need to alert the public of the possible magnitude of the bird-window collision issue, it was highly uncertain at the time and undoubtedly outdated more than three decades hence. Indeed, by 2010 Klem (2010) characterized the upper end of his estimated range – 1 billion bird fatalities – as conservative. Furthermore, the estimate lumped species together as if all birds are the same and the loss of all birds to windows has the same level of impact.

By the time Loss et al. (2014) performed their effort to estimate annual USA bird-window fatalities, many more fatality monitoring studies had been reported or were underway. Loss et al. (2014) incorporated many more fatality rates based on scientific

monitoring, and they were more careful about which fatality rates to include. However, they included estimates based on fatality monitoring by homeowners, which in one study were found to detect only 38% of the available window fatalities (Bracey et al. 2016). Loss et al. (2014) excluded all fatality records lacking a dead bird in hand, such as injured birds or feather or blood spots on windows. Loss et al.'s (2014) fatality metric was the number of fatalities per building (where in this context a building can include a house, low-rise, or high-rise structure), but they assumed that this metric was based on window collisions. Because most of the bird-window collision studies were limited to migration seasons, Loss et al. (2014) developed an admittedly assumption-laden correction factor for making annual estimates. Also, only two of the studies included adjustments for carcass persistence and searcher detection error, and it was unclear how and to what degree fatality rates were adjusted for these factors. Although Loss et al. (2014) attempted to account for some biases as well as for large sources of uncertainty mostly resulting from an opportunistic rather than systematic sampling data source, their estimated annual fatality rate across the USA was highly uncertain and vulnerable to multiple biases, most of which would have resulted in fatality estimates biased low.

In my review of bird-window collision monitoring, I found that the search radius around homes and buildings was very narrow, usually 2 meters. Based on my experience with bird collisions in other contexts, I would expect that a large portion of bird-window collision victims would end up farther than 2 m from the windows, especially when the windows are higher up on tall buildings. In my experience, searcher detection rates tend to be low for small birds deposited on ground with vegetation cover or woodchips or other types of organic matter. Also, vertebrate scavengers entrain on anthropogenic sources of mortality and quickly remove many of the carcasses, thereby preventing the fatality searcher from detecting these fatalities. Adjusting fatality rates for these factors – search radius bias, searcher detection error, and carcass persistence rates – would greatly increase nationwide estimates of bird-window collision fatalities.

Buildings can intercept many nocturnal migrants as well as birds flying in daylight. As mentioned above, Johnson and Hudson (1976) found 266 bird fatalities of 41 species within 73 months of monitoring of a four-story glass walkway at Washington State University (no adjustments attempted for undetected fatalities). Somerlot (2003) found 21 bird fatalities among 13 buildings on a university campus within only 61 days. Monitoring twice per week, Hager at al. (2008) found 215 bird fatalities of 48 species, or 55 birds/building/year, and at another site they found 142 bird fatalities of 37 species for 24 birds/building/year. Gelb and Delacretaz (2009) recorded 5,400 bird fatalities under buildings in New York City, based on a decade of monitoring only during migration periods, and some of the high-rises were associated with hundreds of fatalities each. Klem et al. (2009) monitored 73 building façades in New York City during 114 days of two migratory periods, tallying 549 collision victims, nearly 5 birds per day. Borden et al. (2010) surveyed a 1.8 km route 3 times per week during 12-month period and found 271 bird fatalities of 50 species. Parkins et al. (2015) found 35 bird fatalities of 16 species within only 45 days of monitoring under 4 building façades. From 24 days of survey over a 48-day span, Porter and Huang (2015) found 47 fatalities under 8 buildings on a university campus. Sabo et al. (2016) found 27 bird fatalities over 61 days of searches under 31 windows. In San Francisco, Kahle et al. (2016) found 355

collision victims within 1,762 days under a 5-story building. Ocampo-Peñuela et al. (2016) searched the perimeters of 6 buildings on a university campus, finding 86 fatalities after 63 days of surveys. One of these buildings produced 61 of the 86 fatalities, and another building with collision-deterrent glass caused only 2 of the fatalities, thereby indicating a wide range in impacts likely influenced by various factors. There is ample evidence available to support my prediction that the proposed project would result in many collision fatalities of birds.

Project Impact Prediction

By the time of these comments, I had reviewed and processed results of bird collision monitoring at 213 buildings and façades for which bird collisions per m^2 of glass per year could be calculated and averaged (Johnson and Hudson 1976, O'Connell 2001, Somerlot 2003, Hager et al. 2008, Borden et al. 2010, Hager et al. 2013, Porter and Huang 2015, Parkins et al. 2015, Kahle et al. 2016, Ocampo-Peñuela et al. 2016, Sabo et al. 2016, Barton et al. 2017, Gomez-Moreno et al. 2018, Schneider et al. 2018, Loss et al. 2019, Brown et al. 2020, City of Portland Bureau of Environmental Services and Portland Audubon 2020, Riding et al. 2020). These study results averaged 0.073 bird deaths per m^2 of glass per year (95% CI: 0.042-0.102). This average and its 95% confidence interval provide a robust basis for predicting fatality rates at a proposed new project.

With the estimated average bird collision mortality above, all I need are estimates of window extents in the project. The IS/MND does not predict the extents of windows in the project, nor does it provide any renderings of the homes in the project. However, it predicts 817,050 square feet in 419 single-family homes, which I can compare to the average m^2 of glass windows relative to the sf of floor space that I have maintained in a database of other single-family residential development projects for which I have been able to measure window extents in renderings of the homes. Assuming 0.015193 m^2 of glass window extent per sf, then I predict 12,413 m^2 of windows among the single-family homes. This extent of windows multiplied against the above-reported average bird collision deaths per m^2 of glass per year predicts 907 (95% CI: 539–1,276) bird collision fatalities per year.

The vast majority of these predicted deaths would be of birds protected under the Migratory Bird Treaty Act and under the California Migratory Bird Protection Act, thus causing significant unmitigated impacts that were not addressed in IS/MND. Given the predicted level of bird-window collision mortality, and the lack of any proposed mitigation, it is my opinion that the proposed project would result in potentially significant adverse biological impacts, including the unmitigated take of both terrestrial and aerial habitat of birds and other sensitive species. Not only would the project take habitat of rare and sensitive species of birds, but it would transform the project's airspace into a lethal collision trap to birds.

CUMULATIVE IMPACTS

One of CEQA's principal concerns regarding potential project impacts is whether a proposed project would contribute significantly to cumulative impacts of past, present and future projects, or to multiple types of impacts that are cumulatively considerable. Unfortunately, the IS/MND fails to seriously analyze the project's contribution to cumulative impacts on biological resources. According to the IS/MND (section 4.21), "While the Project may have the potential to impact the environment on a Project-specific basis, these impacts would be limited in nature, as detailed throughout this IS/MND analysis. Further, compliance with regulatory requirements and implementation of mitigation measures would reduce any potential impacts to less than significant levels." However, if it was a simple matter of complying with regulatory requirements and implementing the project-specific mitigation measures, then CEQA would not need to require a cumulative impacts analysis.

This notion that complying with regulatory requirements and implementing the project-specific mitigation measures would avoid significant cumulative impacts is inconsistent with CEQA's definition of a cumulative impact. CEQA defines a cumulative impact as an impact "created as a result of the combination of the project evaluated in the EIR together with other projects causing related impacts" (CEQA Guidelines §15065 (a)(3)). Even though a project's direct or indirect effects might be mitigated to a less than significant impact at the project level, it can still incrementally contribute to the effects of other projects for a significant cumulative impact. Furthermore, the CEQA Guidelines (§15064(h)(3)) states, "When relying on a plan, regulation or program, the lead agency should explain how implementing the particular requirements in the plan, regulation or program ensure that the project's incremental contribution to the cumulative effect is not cumulatively considerable." The IS/MND fails to explain how regulatory requirements would minimize, avoid or offset the project's contributions to cumulative impacts. CEQA requires a cumulative impacts analysis.

The IS/MND's conclusion that existing regulations and project-specific mitigation would avoid significant cumulative impacts lacks evidentiary support, and it is readily refutable. Noriko Smallwood and I performed an experiment to measure the efficacy of applicable laws and regulations, permitting requirements, and required mitigation measures at avoiding or minimizing project impacts including cumulative impacts. We revisited the project sites we had surveyed as experts to repeat the survey methods at the same time of year, the same start time in the day, and the same methods and survey duration to control these sources of variation to cleanly measure the effects of mitigated development on wildlife. We structured the experiment in a before-after, control-impact experimental design, as some of the sites had been developed since our initial survey and some had remained undeveloped. All the developed sites had included mitigation measures to avoid, minimize or compensate for impacts to wildlife. Nevertheless, we found that mitigated development resulted in a 66% loss of species on site, and 48% loss of species in the project area. Counts of vertebrate animals declined 90%. We found that "Development impacts measured by the mean number of species detected per survey were greatest for amphibians (-100%), followed by mammals (-86%), grassland birds

(-75%), raptors (-53%), special-status species (-49%), all birds as a group (-48%), non-native birds (-44%), and synanthropic birds (-28%). Our results indicated that urban development substantially reduced vertebrate species richness and numerical abundance, even after richness and abundance had likely already been depleted by the cumulative effects of loss, fragmentation, and degradation of habitat in the urbanizing environment," and despite all the mitigation measures and existing policies and regulations. Experimental evidence demonstrates the need to analyze a project's potentially significant contributions to cumulative impacts on wildlife despite existing laws, policies and project-by-project requirements of mitigation. The environmental review for this project needs to include an appropriate cumulative impacts analysis.

Considering the predictable impacts from habitat destruction, the project's interference with wildlife movement in the region, the depredation of wildlife by house cats that would be introduced to the area with new residents, and the collision mortality of wildlife with project-generated automobile traffic and the windows of homes, there is at least a fair argument that can be made for the need to prepare an EIR to appropriately analyze the project for its potential impacts on wildlife and to formulate an effective mitigation strategy.

FLAWED MITIGATION STRATEGY

The mitigation strategy needs to be based on a sound understanding of the existing wildlife community. It needs to be known which species occur or are likely to occur on the project site as well as the nature of their occurrences. It needs to known which species are resident and which are migratory. For special-status species, detection surveys should have been completed to either detect the species or to obtain evidence of its absence. Surveys should have been completed to understand how wildlife use the site in their movement patterns. And what was found of wildlife species needs to be carefully interpreted by comparing the findings to the findings from other survey efforts at other sites. Failures to detect species should be interpreted relative to the probabilities of their detections given the survey effort. The mitigation strategy needs to follow the steps under Assess species occurrence likelihoods and Characterize wildlife community, followed by Step 7: Predict impacts (Figure 3). However, the IS/MND's mitigation strategy does not follow from these steps, but rather copies a generic strategy that has been used at many other projects with no measurement of efficacy. This pointed out, my comments follow in regular font the summary of each required mitigation measure in italics.

BIO-1 *The Project Applicant shall retain a qualified Biologist to conduct a pre-construction survey for burrowing owl on the Proposed Project Site … within 30 days prior to construction. Methods for the pre-construction surveys shall be conducted as a one-day focused survey following the Burrowing Owl Survey Instructions for the Western Riverside Multiple Species Habitat Conservation Plan (MSHCP 2006). … If burrowing owl are observed, the Project Applicant … shall contact the City to discuss avoidance and minimization options. During the breeding season…, restrictions shall be placed on construction activities in the vicinity of any active burrow until the burrow is no longer active, as determined by a qualified Biologist. The protective*

buffer shall be 500 feet (or as otherwise approved by the City) around the active burrow. … During the wintering season, an active burrow may be closed following CDFW-approved procedures with permission from the City. If the wintering burrow would not be directly impacted, a protective buffer of 160 feet (or as otherwise approved by the City) shall be placed around the burrow. …

A preconstruction survey of one day carries nowhere near the detection probability of a focused series of breeding-season surveys, which is important because it has been too long since the focused surveys were conducted in 2023. What is needed prior to a preconstruction survey is a focused breeding-season survey.

Getting this measure right is very important because Riverside County cannot afford to lose any more burrowing owls to habitat destruction. The MSHCP has failed to achieve its conservation goals for the burrowing owl. The 2023 Annual Report of the MSHCP (p. 8-8) states, "The species objectives for Burrowing Owl (*Athene cunicularia hypugaea*) require the conservation of five Core Areas, plus interconnecting linkages, containing a breeding population of 120 Burrowing Owls with no fewer than five pairs in any one Core Area." (https://www.wrc-rca.org/document-library/annual-reports/) In 2022, there were 7 pairs in one Core Area, 4 of which produced a total 4 fledglings (1 fledgling per successful nest attempt). In 2023, this Core Area was down to 5 pairs, of which one succeeded in producing a single fledgling. Another Core area contained 3 pairs in 2022, and 3 fledglings were recorded by one of these pairs. In 2023, this Core Area was down to 2 pairs, one of which produced 5 fledglings. The evidence shows a dismal failure of the MSHCP to conserve burrowing owls, as the documented breeding population was 20 (16.67% of the target) in 2022 and 14 (11.67% of the target) in 2023, and only one (20%) Core Area contained at least five pairs in either year. The MSHCP has failed to conserve burrowing owls at target levels, and its performance is declining.

BIO-2 *To the extent possible, vegetation removal will be conducted during the non-breeding season … to minimize direct impacts on nesting birds and raptors. If construction activities would be initiated during the peak breeding season for nesting birds/raptors (February 1–June 30), a pre-construction survey will be conducted by a qualified Biologist within three days prior to the initiation of construction …. The nesting bird/raptor survey area will include a buffer of 100 feet around the work area for nesting birds and a buffer of 500 feet around the work area for nesting raptors. This survey can be combined with the pre-construction burrowing owl survey described in MM BIO-1. If the Biologist does not find any active nests in or immediately adjacent to the impact area, construction activities can proceed.*

If the Biologist detects an active nest within or immediately adjacent to the construction area and determines that the nest may be impacted, or breeding activities substantially disrupted by increased activity around the nest, the Biologist will determine an appropriate protective buffer around the nest depending on the sensitivity of the species and the nature of the construction activity. The protective buffer shall be between 25 to 100 feet for nesting birds and 300 to 500 feet for nesting raptors. … Construction can proceed within the protective buffer when the qualified

Biologist has determined that the nest is no longer active (i.e., fledglings have left the nest, or the nest has failed).

If the project goes forward, preconstruction surveys for nesting birds should be implemented, but this measure would not avoid the permanent loss of habitat, predation by house cats, nor the collision mortality with automobiles and the windows of homes. Preconstruction, take-avoidance surveys should consist of two steps, both of which are very difficult. First, the biologist(s) performing the survey must identify birds that are breeding. Second, the biologist(s) must locate the breeding birds' nests. The first step is typically completed by observing bird behaviors such as food deliveries and nest territory defense. To be successful, these types of observations typically require many surveys on many dates spread throughout the breeding season even for a single species. To identify and locate the birds of all species nesting on a site would require a much greater survey effort than can be accomplished in BIO-2's allotted timespan. Many bird nests would be missed.

I estimate the project site supports 145 nest sites in the average year, and this number does not include those that would need to be located within the defined buffer area beyond the project site's boundary. Even assuming all these nests could be found (not likely), the mitigation measure would apply only to the breeding season of the survey. After the breeding season of the preconstruction survey, there would be no further production of birds from the project site. The project's impact on birds would be permanent and of large magnitude. The conservation benefits of this measure would be *de minimis* compared to the project's potential impacts on breeding birds.

Furthermore, the mitigation language allows a single individual to make a subjective decision, outside the public's view, to determine the buffer area and buffer timing for any given species. This measure lacks objective criteria, and it is therefore unenforceable.

Lastly, the mitigation language includes the requirement that the preconstruction nest survey shall be conducted by a qualified biologist, and this requirement carries over to determinations of the buffer areas and buffer timing to avoid take caused by construction activities. Undefined, however, is what qualifies as a "qualified biologist" in these contexts. As mentioned earlier in this letter, Noriko Smallwood and I have been conducting surveys over the past several years to estimate total nest density, which is relevant to a preconstruction, take-avoidance survey because our surveys were likewise directed to all bird species that could be concurrently nesting on a site. Searching for the nests of one species is difficult, but searching for nests of all bird species at once is vastly more difficult. For this reason, there are very few published estimates of total nest density, and there are very few wildlife biologists who have experience with surveys for the nest attempts of all bird species on a given site. A technical way to qualify a wildlife biologist for the tasks outlined in this measure would be to obtain an agency Memorandum of Understanding in which the biologist is named and said to be qualified for conducting the preconstruction survey and for determining the take-avoidance buffer area and timing. However, a more compelling means of qualifying the biologist would be to require that the biologist has achieved demonstrable experience with nest

surveys and avian nesting behavior. Without a better definition of what is a qualified biologist in the contexts of these tasks, BIO-2 lacks objective criteria, and it is therefore unenforceable.

BIO-3 *Prior to the issuance of a grading permit, the Project Applicant shall pay the MSHCP mitigation fee as directed by the City of San Jacinto based on the most current rates.*

The evidence indicates the MSHCP is failing to meet its conservation goals and objectives while at the same time frontloading development. The biological goal of the MSHCP is to "…conserve covered species and their habitats…" by acquiring 153,000 acres of additional reserve land and meeting species-specific numerical thresholds of abundance. According to the 2023 annual report, additional acreage acquired through 2023 totaled 68,100 acres, or 44.5% of the goal. Only 47,056 acres were managed under Regional Conservation Authority (RCA), or 31% of the goal. Over the same period, habitat losses totaled 101,214 acres, of which 19,104 acres (19%) were inside Criteria Cells. The MSHCP is failing to meet its goals and objectives.

The MSHCP has also failed to achieve its conservation goals for white-tailed kite – a California Fully Protected species. The first four 3-year monitoring periods were missed, or if they were implemented then no reports of them are available. Based on the last 3-year period reported (2021-2023), The first objective to conserve at least 19,880 ac of breeding habitat had not been achieved. I cannot determine whether the second objective was achieved to "include in the MSHCP Conservation Area of at least 10 Core Areas," because the meaning of the objective is nebulous. The third objective to "conserve at least 281,890 ac of … foraging habitat" has not been achieved. The fourth objective to "conserve known winter roost area along San Timoteo Creek and any additional winter roost locations identified in the future" is unknown, because I have seen no reporting on this objective. The fifth objective to "maintain the continued use of, and successful reproduction in, at least 75 percent of the Core Areas every three years" was not achieved. In the 3-year periods ending in 2017, 2020, and 2023, the number of nests found in core areas decreased from 3 to 2 to 0. The MSHCP has failed to conserve white-tailed kites at target levels, and its performance is declining.

Of 143 assessments of MSHCP covered species in the 2023 Annual Report, 88 (62%) had failed to achieve the MSHCP's population performance threshold (Table 3). Of these 88 species, the measured population performance of 49 fell far below the MSHCP's threshold. Of the 55 species whose MSHCP's population performance threshold were met as of 2023, 10 barely met the threshold. In other words, only 45 (31%) of the covered species have been measured firmly above their population performance thresholds. I must add, however, that many of these thresholds were established to be easily achieved.

Table 3. *Whether population performance threshold was achieved, according to status update in 2023 Annual Report of the MSHCP. Boldened "No" means the measured success deviates far from the threshold.*

Common name	***Scientific name***	**Success?**
Arroyo toad	*Bufo californicus*	**No**
California red-legged frog	*Rana aurora draytonii*	No
Coast range newt	*Taricha torosa torosa*	Yes
Mountain yellow-legged frog	*Rana muscosa*	No
Western spadefoot	*Scaphiopus hammondii*	Yes (slim)
Belding's Orange-throated Whiptail	*Cnemidophorus hyperythrus belding*	No
Coastal western whiptail	*Cnemidophorus tigris multiscutatus*	Yes
Granite night lizard	*Xantusia henshawi henshawi*	Yes
Granite spiny lizard	*Sceloporus orcuttii*	Yes
Northern red-diamond rattlesnake	*Crotalus ruber ruber*	Yes
San Bernardino mountain kingsnake	*Lampropeltis zonata parvirubra*	No
San Diego banded gecko	*Coleonyx variegatus abbotti*	No
San Diego horned lizard	*Phrynosoma coronatum blainvillei*	Yes (slim)
San Diego mountain kingsnake	*Lampropeltis zonata pulchra*	**No**
Southern rubber boa	*Charina bottae umbratica*	**No**
Southern sagebrush lizard	*Sceloporus graciosus vandenburgianus*	No
Western pond turtle	*Clemmys marmorata pallida*	**No**
American bittern	*Botaurus lentiginosus*	Yes
Bald eagle	*Haliaeetus leucocephalus*	No
Bell's sparrow	*Amphispiza belli belli*	Yes
Black swift	*Cypseloides niger*	**No**
Black-crowned night-heron	*Nycticorax nycticorax*	Yes
Burrowing owl	*Athene cunicularia hypugaea*	**No**
Cactus wren	*Campylorhynchus brunneicapillus*	**No**
California horned lark	*Eremophila alpestris actia*	Yes
California spotted owl	*Strix occidentalis occidentalis*	**No**
Coastal California gnatcatcher	*Polioptila californica californica*	Yes
Cooper's hawk	*Accipiter coiperii*	Yes
Double-crested cormorant	*Phalacrocorax auritus*	Yes
Downy woodpecker	*Picoides pubescens*	Yes
Ferruginous hawk	*Buteo regalis*	No
Golden eagle	*Aquila chysaetos*	**No**
Grasshopper sparrow	*Ammodramus savannarum*	**No**
Great blue heron	*Ardea Herodias*	Yes
Least Bell's vireo	*Vireo bellii pusillus*	Yes
Loggerhead shrike	*Lanius ludoviscianus*	No
MacGillivray's warbler	*Oporonis tolmei*	**No**
Merlin	*Falco columbarius*	No
Mountain plover	*Charadrius montanus*	**No**
Mountain quail	*Oreortyx pictus*	Yes
Nashville warbler	*Vermivora ruficapilla*	**No**

Common name	***Scientific name***	**Success?**

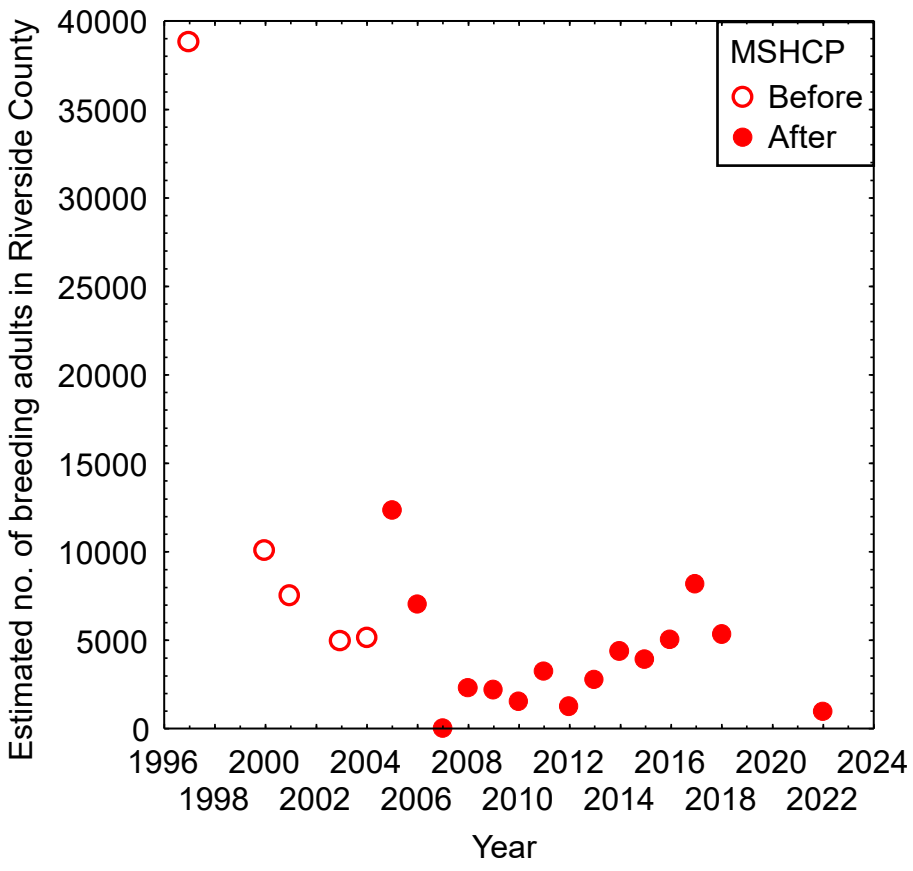
Vernal Barley	*Hordeum intercedens*	Yes (slim)
Wright's Trichocoronis	*Trichocoronis wrightii var. wrightii*	**No**
Yucaipa Onion	*Allium marvinii*	**No**

The tricolored blackbird can serve as an example of a species that reportedly has been successfully conserved under the MSHCP, but only just barely clearing an easy success threshold. The population performance threshold was to "Maintain (once every 5 years) the continued use of, and successful reproduction within at least 1 of the identified Core Areas," which should have been easily achieved if the species' populations were (1) truly performing well, and (2) static in distribution. No monitoring was completed over six of the years since 2004, but of the years that were monitored, no breeding colonies were found in any Core Areas over four years, and breeding colonies were found in only one Core Area over seven years including over the last six years when tricolored blackbirds were monitored. As with other covered species, tricolored blackbirds shift their activity areas interannually and do not remain within Core Areas. This shifting mosaic pattern of abundance is typical of terrestrial animal populations (Taylor and Taylor 1979), and it is of course ill-suited to a conservation strategy focused on Core Areas.



Over multiple tricolored blackbird annual reports, the authors recommended redefining Core Areas to encompass the colony sites of breeding tricolored blackbirds. However, to stay true to the MSHCP's conservation strategy, the authors of the 2022 report of tricolored blackbird monitoring reversed their earlier recommendation with the following conclusion: "At this time we do not have any recommended changes to the Core Area definitions or species objectives for Tricolored Blackbirds. As currently written, the Core Areas seem to generally capture where Tricolored Blackbirds occur within the Plan Area, although most of their activity is concentrated within just one Core Area (Mystic Lake/San Jacinto WA)." There is some internal inconsistency to this conclusion, which indicates a steadfastness to an ill-conceived strategy of expecting covered species to remain within Core Areas.

A better metric for assessing the performance of the MSHCP would have been the number of animals counted from year to year. In the case of tricolored blackbird, counts

were made of the number of breeding adults. These counts began prior to the MSHCP, and altogether they indicate a declining trend (Figure 10). The 2022 survey method switched to making counts from automobiles, which might have biased the last estimate low, but this reflects how the MSHCP's monitoring is being managed. Regardless, the evidence collected per the MSHCP indicates an ongoing decline of tricolored blackbirds despite the conservation strategy of the MSHCP.

Although I have yet to thoroughly examine the available reports of monitoring of covered species, I saw no evidence of any species having expanded its occupied area or increased in abundance within the MSHCP area. Overall, the evidence supports the conclusion that most covered species have failed to achieve their population performance thresholds as of 2023, and most species have declined in spatial extent and abundance. The conservation strategy of the MSHCP has largely proven unsuccessful.

Figure 10. *Trend in the estimated number of breeding adult tricolored blackbird in Riverside County. Data are from MSHCP monitoring reports.*

As introduced above, the MSHCP's conservation strategy of conserving Core Areas is a reason to distrust the notion that the MSHCP is going to offset individual project contributions to cumulative impacts. This strategy fails to consider the chronic impacts of the ecological sinks created by the projects' habitat destruction. One such ecological sink includes road traffic, which chronically takes members of species targeted for protection in the Core Areas. The MSHCP fails to consider that wildlife are mobile, and that wildlife cannot persist without expressing their mobility. To migrate, disperse, forage, and patrol home ranges, wildlife must cross roads. Furthermore, the consigning

of wildlife to Core Areas per the MSHCP's strategy exposes those "preserved" wildlife to catastrophic losses from wildfire. Having worked with endangered species in small, isolated habitat patches, I have witnessed what happens when fire burns all the vegetation remaining in the patch, or when drought destroys all the forage; species are extinguished. The MSHCP cannot alone mitigate the impacts of this or all the other projects participating with it.

BIO-4 *The Project Applicant and their designee (i.e., Construction Contractors) shall follow required MSHCP Construction Minimization Measures (Section 7.5.3 of the MSHCP). Applicable construction minimization measures are listed below*. [A list of Best Management Practices followed.]

Should the project go forward, I concur with the implementation of all Best Management Practices, but it needs to be understood that their conservation benefits would be *de minimis* relative to project impacts on wildlife. None of the identified measures would avoid habitat loss, habitat fragmentation, and wildlife-automobile collision mortality of workers and vendors traveling to and from the construction site, nor of employees commuting or traveling as per operations of the project over the years following construction. Further, the MSHCP has not been effective at conserving its covered species (see my comments on BIO-3).

NEEDED MITIGATION MEASURES

Compensatory Habitat Protection: The project would destroy the productive capacity of the project site for birds and other wildlife. The loss of this capacity would need to be offset by compensatory mitigation as near to the site as possible. I recommend a 5:1 mitigation ratio to achieve a no net loss standard, as a 1:1 ratio would simply ensure a 50% loss of habitat between the project site and mitigation site.

The loss of burrowing owl foraging opportunities would need to be mitigated. The applicant needs to consult with the CDFW to learn what mitigation ratio would be acceptable for loss of burrowing owl habitat on the project site, and whether and where habitat is available to be protected nearby.

Road Mortality: Compensatory mitigation is needed for the increased wildlife mortality that would be caused by collisions with automobiles due to project-generated road traffic in the region. I suggest that this mitigation can be directed toward funding research to identify fatality patterns and effective impact reduction measures such as reduced speed limits and wildlife under-crossings or overcrossings of particularly dangerous road segments. Compensatory mitigation can also be provided in the form of donations to wildlife rehabilitation facilities (see below).

Bird-Window Collision Mortality: If the project goes forward, it should at a minimum adhere to available Bird-Safe Guidelines, such as those prepared by American Bird Conservancy and New York and San Francisco. The American Bird Conservancy (ABC) produced an excellent set of guidelines recommending actions to: (1) Minimize use of glass; (2) Placing glass behind some type of screening (grilles, shutters, exterior

shades); (3) Using glass with inherent properties to reduce collisions, such as patterns, window films, decals or tape; and (4) Turning off lights during migration seasons (Sheppard and Phillips 2015). The City of San Francisco (San Francisco Planning Department 2011) also has a set of building design guidelines, based on the excellent guidelines produced by the New York City Audubon Society (Orff et al. 2007). The ABC document and both the New York and San Francisco documents provide excellent alerting of potential bird-collision hazards as well as many visual examples. The San Francisco Planning Department's (2011) building design guidelines are more comprehensive than those of New York City, but they could have gone further. For example, the San Francisco guidelines probably should have also covered scientific monitoring of impacts as well as compensatory mitigation for impacts that could not be avoided, minimized or reduced.

New research results inform of the efficacy of marking windows. Whereas Klem (1990) found no deterrent effect from decals on windows, Johnson and Hudson (1976) reported a fatality reduction of about 69% after placing decals on windows. In an experiment of opportunity, Ocampo-Peñuela et al. (2016) found only 2 of 86 fatalities at one of 6 buildings – the only building with windows treated with a bird deterrent film. At the building with fritted glass, bird collisions were 82% lower than at other buildings with untreated windows. Kahle et al. (2016) added external window shades to some windowed façades to reduce fatalities 82% and 95%. Brown et al. (2020) reported an 84% lower collision probability among fritted glass windows and windows treated with ORNILUX R UV. City of Portland Bureau of Environmental Services and Portland Audubon (2020) reduced bird collision fatalities 94% by affixing marked Solyx window film to existing glass panels of Portland's Columbia Building. Many external and internal glass markers have been tested experimentally, some showing no effect and some showing strong deterrent effects (Klem 1989, 1990, 2009, 2011; Klem and Saenger 2013; Rössler et al. 2015). For example, Feather Friendly® circular adhesive markers applied in a grid pattern across all windows reduced bird-window collision mortality by 95% in one study (Riggs et al. 2023) and by 95% in another (de Groot et al. 2021). Another study tested the efficacy of two filmshades to be applied exteriorly to windows prior to installations: BirdShades increased bird-window avoidance by 47% and Haverkamp increased avoidance by 39% (Swaddle et al. 2023).

Fund Wildlife Rehabilitation Facilities: Compensatory mitigation is needed, and it ought to also include funding contributions to wildlife rehabilitation facilities to cover the costs of injured animals that will be delivered to these facilities for care. Many animals would likely be injured during construction and by collisions with automobiles traveling to and from the project site.

Landscaping: If the project goes forward, California native plant landscaping (i.e., grassland and locally appropriate scrub plants) should be considered to be used as opposed to landscaping with lawn and exotic shrubs and trees. Native plants offer more structure, cover, food resources, and nesting substrate for wildlife than landscaping with lawn and ornamental trees. Native plant landscaping has been shown to increase the abundance of arthropods which act as important sources of food for wildlife and are crucial for pollination and plant reproduction (Narango et al. 2017, Adams et al. 2020,

Smallwood and Wood 2022.). Further, many endangered and threatened insects require native host plants for reproduction and migration, e.g., monarch butterfly. Around the world, landscaping with native plants over exotic plants increases the abundance and diversity of birds, and it is particularly valuable to native birds (Lerman and Warren 2011, Burghardt et al. 2008, Berthon et al. 2021, Smallwood and Wood 2022). Landscaping with native plants is a way to maintain or to bring back some of the natural habitat and lessen the footprint of urbanization by acting as interconnected patches of habitat for wildlife (Goddard et al. 2009, Tallamy 2020). Lastly, not only does native plant landscaping benefit wildlife, it requires less water and maintenance than traditional landscaping with lawn and hedges.

Thank you for your consideration,

_____

Shawn Smallwood, Ph.D.

Re: Comment on Mitigated Negative Declaration, Chacon Farms Project (SCH 2025101241), March 24, 2026, Planning Commission Agenda Item 5.1

Dear Chair Peterson, Vice Chair Scott, Honorable Commissioners and Planner Hernandez:

This comment is submitted on behalf of Supporters Alliance For Environmental Responsibility ("SAFER") regarding the Initial Study and Mitigated Negative Declaration ("IS/MND") prepared for the Chacon Farms Project (SCH 2025101241), which proposes the development of master-planned residential development consisting of 419 dwelling units as well as the construction of onsite roadways, a detention basin, parks, and on-site landscaping on 73.97-net acres, located at 710 Cawston Avenue North (APNs 432-260-009, 432-260-026, and 432-260-027) in the City of San Jacinto ("Project").

SAFER is concerned that the IS/MND is improper under the California Environmental Quality Act due to the IS/MND's failure to adequately assess the Project's potentially significant environmental impacts. SAFER requests that an environmental impact report (EIR) be prepared for the Project rather than an MND because there is a fair argument that the Project may have adverse environmental impacts. An EIR will ensure that potentially significant impacts of this Project are fully disclosed, analyzed, and mitigated.

SAFER reserves the right to supplement this comment throughout the administrative process. *Galante Vineyards v. Monterey Peninsula Water Management Dist*., 60 Cal. App. 4th 1109, 1121 (1997).

Sincerely,

Richard Drury
Lozeau Drury LLP

Public Comment: April 7, 2026

Letter of comment for San Jacinto City Council Members regarding the new housing development Chacon Farms Project in San Jacinto, CA.

We have some concerns about the safety of the roads near the Chacon Farms Project, namely Cawston Ave North between Esplane and 7th, and 7th Street between Cawston and Sanderson. The concerns we have are for the safety of both pedestrians and vehicles alike. In our San Jacinto Valley, homes typically have several cars each, so adding 419 homes becomes thousands of cars. Based on the 11th Edition ITE Manual Analysis, the Chacon Farms Project is projected to generate roughly 3,952 daily vehicle trips. Having reduced the number of entrance/exits in the project from 3 down to 2 will greatly increase the impact on both Cawston Ave N and 7th Street.

Our property is located along Cawston and 7th streets, so we will share the roads with this new development. We have yet to be made aware of what - if any - actual improvements to these streets will be. At the planning commission meeting on March 24, 2026, there were no specific/complete plans available for road improvements.

Currently, Cawston Ave N is a narrow street with a temporary sidewalk on the West side and no turning lanes or shoulders for either lane, making it difficult and sometimes dangerous for vehicles to turn into and out of the driveways. This is a "bottleneck" of sorts, as Cawston Ave North of 7th and South of Esplanade is improved with sidewalks, turning lanes and shoulders, appropriate for the homes and schools in the area.

7th Street between Sanderson and Cawston is currently improved on the Westbound lane with sidewalks and turning lanes into housing projects. However, the Eastbound lane is narrow and has no turn lanes or shoulders, which makes it difficult and dangerous for vehicles to turn intoand out of the driveways.

Talley Meadows Layups and Retirement, our busy working horse ranch for the past 10 years, has several gated entrances along Cawston and 7th streets. While we understand the need for development in our community, we feel it is imperative to widen and improve Cawston Ave between Esplanade and 7th, and 7th street between Cawston and Sanderson for the safety and wellbeing of school children, families and those traveling in vehicles.

Thank you for your thoughtful consideration of our concerns,

Joe and Christy Talley

April 7, 2026

To the City Council Members of San Jacinto, CA,
Public Comment Regarding Traffic Safety Concerns for the Chacon Farms Project

We, Michael and Emalee Tomoni, owners of Talley Meadows Layups and Retirement, wish to formally express our significant concerns regarding pedestrian and vehicle safety near the proposed Chacon Farms Project.

Our property is located at the intersection of Cawston Avenue and 7th Street, and we will directly share these roads with the new development. Based on the project's projected generation of approximately 3,952 daily vehicle trips (11th Edition ITE Manual Analysis), we anticipate a substantial increase in traffic volume.

We have specific safety concerns regarding the current state of local infrastructure:

- **Reduced Access:** The reduction of project entrance/exits from three to two will concentrate traffic impact on Cawston Avenue North and 7th Street.
- **Cawston Avenue North (between Esplanade and 7th):** This section is currently narrow with a temporary sidewalk on the west side and lacks turning lanes or shoulders. This creates a "bottleneck" and dangerous turning conditions, unlike the improved sections north of 7th and south of Esplanade.
- **7th Street (between Cawston and Sanderson):** The eastbound lane is narrow, with no turn lanes or shoulders, making turns into and out of driveways difficult and unsafe.

Proposed Solution

We feel it is imperative that the City mandates the widening and improvement of Cawston Avenue (between Esplanade and 7th) and 7th Street (between Cawston and Sanderson) before the project's completion. These improvements are vital for the safety and well-being of local school children, families, and all travelers in the area.

We appreciate your thoughtful consideration of these critical safety concerns.

Sincerely,

Michael and Emalee Tomoni

July 21, 2026

TO:	City Council
REQUESTED BY:	Kevin White, Community Development Director
APPROVED BY:	Travis Randel, Interim City Manager
SUBJECT:	Appeal of the Conditions of Approval for the Magnet Shopping Center that includes a Grocery Store, Retail Shops/Pads, Restaurants Pads with Drive-Thru Service, a Car Wash with Drive-Thru Service, a Gas Station with a Convenience Store that includes alcohol sales and a Tentative Parcel Map to create 12 commercial lots on 14.50 acres.

RECOMMENDATION:

Staff recommends that the City Council:

1. **DETERMINE**, based on the whole of the administrative record, that the Project, with incorporation of the mitigation measures identified in the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program, will not have a significant effect on the environment; determine that the recommended revisions to the Conditions of Approval do not result in any new or substantially more severe environmental impacts or otherwise require additional environmental review; and **AFFIRM** the Planning Commission's adoption of the Mitigated Negative Declaration and associated Mitigation Monitoring and Reporting Program pursuant to the California Environmental Quality Act;
2. **GRANT the appeal in part**, solely to the extent reflected in staff's recommended revisions to the Conditions of Approval, and **DENY the remainder of the appeal;** and,
3. **UPHOLD, AS MODIFIED**, the Planning Commission's approval of PROJ23-0013 to establish the Magnet Shopping Center, including:

   a. Site Plan and Design Review No. USE23-0009 for the overall site plan and design of the shopping center;
   b. Tentative Parcel Map No. 38831, SUB23-0005, to subdivide the project site into 12 commercial lots;
   c. Conditional Use Permit No. USE24-0052 to allow alcohol sales within a service station consisting of a gasoline station and a 3,956-square-foot convenience store;
   d. Minor Use Permit No. USE23-0011 for a 3,886-square-foot restaurant with outdoor seating and a drive-through lane, identified as Pad 1;
   e. Minor Use Permit No. USE23-0012 for a 3,203-square-foot restaurant with a drive-through lane, identified as Pad 2;
   f. Minor Use Permit No. USE24-0038 for a 5,705-square-foot retail and restaurant building with a drive-through lane, identified as Pad 3;
   g. Minor Use Permit No. USE23-0013 for a 3,203-square-foot restaurant with a drive-through lane, identified as Pad 4; and
   h. Minor Use Permit No. USE23-0014 for an automated 3,588-square-foot car wash with three queuing lanes;

   subject to the Conditions of Approval, including the modifications recommended by staff.

BACKGROUND:

On May 26, 2026, the Planning Commission approved the Magnet Shopping Center Project, which included two different site plans to give the applicant greater flexibility in attracting tenants to the project. The project proposed by Rich Development includes four Major Tenant buildings, a drive-thru car wash within a 3,588 square foot building, a gas station with a 3,956 square foot convenience store and alcohol sales, a maximum of 12,000 square foot buildings for shops, four restaurants with drive-thru service, and associated on-site parking, drive aisles and landscaping. The project also includes a subdivision to create 12 commercial lots on 14.50 acres. The following is a list of applications approved by the Planning Commission for the project:

1. A Site Plan & Design Review (USE23-0009) for the overall site plan and the design of a 119,476 square foot shopping center.
2. A Tentative Parcel Map (TPM) 38831 (SUB23-0005) to subdivide a 14.50-acre lot into 12 commercial lots.
3. A Conditional Use Permit (USE24-0052), to allow alcohol sales within a Service Station that includes a gasoline station and a 3,956 square foot convenience store.

4. A Minor Use Permit (USE23-0011) for a 3,886 square foot restaurant, with outdoor seating and a drive-thru lane. (Pad 1)
5. A Minor Use Permit (USE23-0012) for a 3,203 square foot restaurant with a drive-thru lane. (Pad 2)
6. A Minor Use Permit (USE24-0038) for a 5,705 square foot retail/restaurant building with a drive-thru lane. (Pad 3)
7. A Minor Use Permit (USE23-0013) for a 3,203 square foot restaurant with a drive-thru lane. (Pad 4)
8. A Minor Use Permit (USE23-0014) for an automated 3,588 square foot car wash with three queuing lanes.

The project site is comprised of two contiguous rectangular-shaped parcels totaling 14.50 acres and is located on the south side of Ramona Expressway, extending between State Street and Eagle Road. The General Plan designation for the site is Commercial (C), which provides for a variety of retail and service-oriented business activities at various intensities to serve the local community and population, as well as the broader market area. The site is zoned Commercial General (CG), which is applied to areas appropriate for general commercial and daily shopping needs of a broad market area, including retail sales and business, professional, and personal services that are accessible to transit corridors. The project is consistent with the General Plan and Zoning.

Project Site and Surrounding Land Use, General Plan, and Zoning

	Land Use	**General Plan**	**Zoning**
Project Site	***Vacant***	***Commercial (C)***	***Commercial General (CG)***
North	Shopping Center & Single Family Residential	Commercial (C) & Low Density Residential (LDR)	Commercial General (CG) & Residential, Low Density (RL)
South	Vacant & Single Family Residences	Commercial (C) & Low Density Residential (LDR)	Commercial Neighborhood (CN) Residential, Low Density (RL)
East	Single Family Residences	Low Density Residential (LDR)	Residential, Low Density (RL)
West	Service Station	Commercial (C)	Commercial General (CG)

The project includes 12 buildings (uses) with six located along Ramona Expressway and six buildings located along the southern property line. In between the two rows of buildings are several drive aisles that interconnect which would allow circulation for passenger vehicles, trucks making deliveries and emergency services. The design of the project has been analyzed to ensure compliance with the standards for the CG zone. The proposed buildings utilize a coordinated palette of materials and colors that are complementary. Smooth-finish stucco in neutral tones, stone veneer accents, parapet articulation, and aluminum storefront systems create a unified architectural identity across the center. Staff finds the design well-articulated, contextually appropriate, and consistent with the City's expectations for high-quality commercial development. The shopping center includes several restaurant pads with drive-thru components. These tenants typically incorporate brand-specific architectural elements, such as signature colors, materials, and façade treatments. The brand specific features will be integrated in a manner that complements the center's primary architectural theme, avoiding visual conflict through consistent massing, parapet heights, material quality, and coordinated color palettes. Furthermore, the project proposes landscaping adjacent to each of the existing roads, along the southern border of the project site, within the parking lots, and adjacent to entrance drives and around specific buildings

Each of the proposed restaurants and the car wash includes a drive-thru lane; therefore, a Minor Use Permit (MUP) was required for each. The MUP's ensure that each component of the drive-thru (such as the location of the speaker within the drive-thru) are located in areas where they won't be disruptive to residential uses or other sensitive uses. The project also includes a Conditional Use Permit for alcohol Sales and a Tentative Parcel Map to subdivide the 14.5-acre site into twelve parcels. The map is designed in a manner that would allow each of the individual buildings, to be owned individually.

Road Improvements

The project benefits from previously installed improvements by others parties, which include a raised landscaped median, as well as curb and gutter that can remain in place along Eagle Road, Ramona Expressway and a portion of State Street. In addition, the project benefits from four existing traffic signals that have been previously installed at intersections in close proximity to the proposed shopping center. These signals include the following intersections:

- State Street at Idyllwild Drive,
- State Street at Ramona Expressway,

- Ramona Expressway at Village of San Jacinto, and
- Ramona Expressway at Eagle Road.

The Conditions of Approval require road improvements on each of the three roadways that are adjacent to project. On Ramona Expressway the applicant will be allowed to utilize the existing curb and gutter, however the conditions of approval require a 2-foot dedication, installation of raised landscaped median, sidewalk and streetlights. On State Street the project will require a 1-foot dedication, installation of a raised landscaped median, the widening of a portion of the roadway, the relocation of a portion of the existing curb and gutter, and the installation of sidewalk and streetlights. With respect to Eagle Road, the applicant will be required to install sidewalk and potentially streetlights.

The conditions also required the developer to address concerns at two intersections. At the Intersection at State Street and Ramona Expressway, the developer is required to submit a signing and striping plan, and traffic signal modifications to address General Plan Consistency. As a result, northbound State Street will add a second left hand turn lane on to Ramona Expressway. In addition the conditions of approval require the payment of a fair share contribution (50.34%) of the construction cost of a traffic signal at the intersection of State Street and Community College Drive which was based on the traffic study submitted for the project.

Drainage Improvements

State Street currently experiences flooding during rain events, which would impact the ingress and egress for the project. The project is required to extend an existing storm drain on State Street and install catch basins which will reduce flooding impacts.

Additionally, a San Jacinto Valley Master Drainage Plan facility (H-1) was planned to run through the project site. An existing drainage line that does not meet the requirements of the San Jacinto Valley Master Drainage Plan Facility currently traverses the site which carries water past the site. The developer will be required to remove the existing drainage line on their property and replace it with a new 10-year drainage facility on Ramona Expressway with new catch basins to address flooding on Ramona Expressway and to collect run-off that will protect their site. The new facility will be equivalent to the Master Drainage Plan (H-1).

Water and Wastewater

The Conditions of Approval require the developer to establish a water and sewer connection. The project is within City of San Jacinto Water service area. If the Developer utilizes the City of San Jacinto Water service, the developer will need to install a looped system to ensure adequate pressure and flow. In order to create the looped system the developer will need to tie into the City's existing water main on Eagle Road just south of Ramona Expressway and run it through the development to State Street. In addition, install a new water main on State Street, south to Idyllwild Drive and east on Idyllwild Drive to Eagle Road where the City's main currently terminates. Alternatively, the developer has the option to utilize Eastern Municipal Water District (EMWD) for water service if the project has been annexed into the EMWD water service area. Wastewater will be provided through the EMWD system with an inter-agency agreement.

DISCUSSION:

Following Planning Commission approval of the project, the City received an appeal application from the project applicant, Rich Development. They request that the City Council waive, remove, or modify five Conditions of Approval related to roadway, drainage, and traffic improvements. The applicant states that it may not be able to fund the required improvements and contends that certain conditions require the project to construct regional infrastructure that should instead be funded by all users who benefit from those facilities. The applicant further argues that several conditions lack the required nexus and proportionality because the required improvements exceed the project's impacts.

A summary of the contested **Conditions of Approval**, the *applicant's appeal*, and staff's responses is provided below.

Condition of Approval No. 98 – San Jacinto Valley Master Drainage Plan (Line H and Line H-1)

The project is impacted by San Jacinto Valley Master Drainage Plan facilities, Line H and Line H-1. PM 22092 dedicated a 40-foot wide easement for storm drain purposes that crosses the site and was intended for Line H-1.

The applicant has submitted a drainage study that proposes an alternative to the adopted master drainage plan. The study would take advantage of an existing 24-inch and 18-inch pipe system in Ramona Expressway (identified as Line H-3) to collect and convey runoff to the existing Line H crossing under Ramona Expressway. The developer/property owner shall upsize Line H-3 to accommodate the tributary 10-year flow rate. The City has no objection to the vacation of the existing drainage easement for Line H-1. Line H should be extended from the existing crossing to the project's southwest corner, an adequate inlet shall be provided at the terminus of Line H. This segment of Line H should be designed to convey the tributary 10-year flow rate. Plans for the drainage improvements, along with supporting hydrology and hydraulic calculations shall be submitted for approval. This condition is required to be met prior to occupancy of any building.

Applicant's Appeal - The San Jacinto Valley Master Drainage Plan (SJCMDP) suggests that H-1 line bisect the property, but at some point, in the past, the City departed from this plan and instead installed an undersized line through the subject property, with no easement. Our proposed project would not contribute any runoff to that line. We feel strongly that there is no nexus for exacting an improvement on this neighborhood retail project. These past decisions have created an erroneous set of circumstances that we are now required to resolve. We feel it's only fair that the upstream users of this line should continue to contribute to the Valley Master Drainage fee program so that this improvement can be completed at a later date by use of these funds.

Staff Response

Line H-1 is a planned regional drainage facility identified in the San Jacinto Valley Master Drainage Plan which was adopted in 1985, that is intended to convey runoff from properties east of the project site to State Street and ultimately to the San Jacinto River. A previous property owner dedicated an easement for this facility in 1987; however, the drainage improvements were never constructed.

Staff recognizes that the planned alignment of Line H-1 conflicts with the proposed shopping center and therefore supports vacating the existing easement and relocating the facility within the Ramona Expressway right-of-way. The relocation is necessitated by the proposed project because development of the site would significantly complicate construction and future maintenance of the planned facility in its original location.

Although the applicant states that the project will not discharge runoff into the planned Line H-1 facility, the relocated drainage improvements remain necessary to provide adequate protection for the project site, reduce the potential for flooding at the eastern project driveways, and maintain safe access for customers and emergency vehicles. The improvements will also reduce the potential for localized flooding on Eagle Road and Ramona Expressway adjacent to the project.

There is an existing 24-inch drainage pipe that was installed during the widening of Ramona Expressway. That improvement was constructed solely to address drainage generated by that roadway improvement and was not designed to satisfy the capacity or function of Line H-1.

The applicant suggests that the improvements should instead be funded through the Master Drainage Fee Program. However, the vast majority of upstream properties were developed decades ago and are not subject to any mechanism requiring additional contributions toward construction of Line H-1. Delaying construction until an unknown future funding source becomes available would leave the project without the drainage improvements necessary to safely accommodate development of the site.

The required improvements are necessary to accommodate the project and maintain the functionality of the adopted Master Drainage Plan and are consistent with the drainage study provided by the applicant. Staff therefore finds that the condition is necessary for orderly development, since without Line H-1 the project site would be impacted by flooding.

Condition of Approval No. 88 – State Street/Community College Drive Traffic Signal

Pursuant to the traffic impact analysis (TIA) prepared by Linscott, Law, & Greenspan Engineers, the developer/property owner shall:

Pay the project's fair share of 50.34% of the total estimated construction cost of the State Street/Community College Drive traffic signal.

As an alternative to paying fair share fees, the developer/property owner may opt to construct the above-mentioned improvements in which the City would support entering into an Improvement and Credit Agreement that would offset construction costs by providing credit for the project's Traffic Signalization and Transportation Uniform Mitigation development fee obligation. This condition is required prior to the Occupancy of any Major Tenant.

Appeal - City staff scoped our traffic impact study and included the intersection of State and Community College, which is already failing by their standards. The nature of the study is an antiquated approach called Level of Service (LOS) which penalizes trip generation. The new modern standard is Vehicle Miles Traveled (VMT) which encourages infill development. Our position is that the intersection is failing because of the College and they should bear the cost of improving their own traffic issues. Please note that there are undeveloped properties on the west of that intersection. The city may need to condemn and acquire additional right-of-way, likely must pay fair market value, and then construct a signal. We question if a signal, as mitigation, is even feasible. We humbly request that the City waive this condition of approval.

Staff Response

Although Vehicle Miles Traveled (VMT) is used to evaluate transportation impacts under CEQA, the City, like most jurisdictions, continues to utilize Level of Service (LOS) to evaluate consistency with the General Plan and the City's Traffic Impact Analysis Guidelines. These guidelines established that an LOS D or better during peak hours is the acceptable operational standard for intersections within the City's roadway network.

The applicant's Traffic Impact Analysis determined that the State Street/Community College Drive intersection currently operates at LOS E and that, with the project, it would degrade to LOS F with project traffic. Under the City's Traffic Impact Analysis Guidelines, when an intersection already operates at LOS E or F and a project increases delay by five seconds or more, improvements are required to offset the project's incremental impact.

The applicant's own Traffic Impact Analysis identified installation of a traffic signal as the appropriate improvement for the increase in traffic, and calculated the project's fair-share responsibility at 50.34 percent of the total construction cost. Accordingly, the condition requires payment of only the project's fair-share cost rather than the full construction cost of the improvement. Because the required contribution is directly based upon the project's documented traffic impacts and proportionate share of the mitigation improvement, staff finds that the condition has the required nexus to the project and is roughly proportional to its impacts.

Condition of Approval No. 91 – Ramona Expressway Frontage Improvements

Ramona Expressway is classified as an Arterial (146'/110'). The portion of the Ramona Expressway between State Street and the Village of San Jacinto half width dedicated right-of-way, shall be improved to provide for 8-inch curb and gutter located 55-foot south of centerline, pavement using a TI of 11.0 and PG 70-10, 37-foot wide parkway consisting of a Class I Multi-Use Path per City of San Jacinto Trails Master plan, landscaping, and streetlights subject to the result of a photometric study prepared by a registered electrical engineer, per City of San Jacinto, County of Riverside and Caltrans standards.
The existing curb and gutter is placed at an acceptable location and can remain in place if it is determined to be in good condition at the time of permits.

The portion of the Ramona Expressway between State Street and the eastern most part of the driveway at Village of San Jacinto is required to be completed prior to occupancy of Pad 1, the Service Station, Shops 1, or any Major tenant.

The portion of the Ramona Expressway between the western most point of Village of San Jacinto driveway and Eagle Road is required to be met prior to occupancy Pad 2, Pad 3, Pad 4, Pad 5, or any Major tenant.

Appeal - We have worked with staff for years interpret San Jacinto standards and reflect them in our design. We object to the nature of these conditions which point back to unclear standards. The plans should govern and provide us with reasonable assurances moving forward.

In addition, our position is that the existing curb and gutter is located in the correct location and should not need replacement unless damaged. There is no 37' parkway proposed and we are unclear as to the implications of the Trails Master Plan.

Staff Response

Ramona Expressway is designated as an arterial roadway within the City's General Plan. As with other development projects throughout the City, new development is required to construct frontage improvements along its property frontage that are consistent with the City's ultimate roadway standards.

The required improvements, including curb and gutter, sidewalk and streetlights would meet the General Plan Requirements.

Staff agrees with the appellant that the condition incorrectly references a 37 foot trail and that requirement has been removed in the updated recommended Conditions of Approval. Existing curb, gutter, and other improvements may remain in place if the City Engineer determines they are in good condition.

These improvements are limited to the project's frontage and are routinely required of similarly situated developments to provide safe pedestrian, bicycle, and vehicular circulation while implementing the City's adopted circulation system. Staff therefore finds that the condition is directly related to the project's development with the modifications mentioned above.

Condition of Approval No. 92 – Raised Landscaped Median on Ramona Expressway

Install raised landscaped median on Ramona Expressway on the east side of "Village at San Jacinto" Intersection to Eagle Road comparable to the existing median west of the said intersection.
This condition shall be met prior to occupancy of Pad 2, Pad 3, Pad 4, Pad 5, or any Major tenant as approved by the City Engineer.

Appeal - We request that this exaction be removed.

Staff Response

The proposed raised landscaped median is necessary to safely manage vehicle turning movements associated with the project's driveways on Ramona Expressway. The project will generate additional traffic entering and exiting the site, making access management necessary to reduce conflict points and improve roadway safety.

The proposed median will restrict unsafe left-turn movements into and out of the eastern project driveway on Ramona Expressway while maintaining traffic circulation consistent with accepted engineering practices. A raised landscaped median already exists west of the project entrance which was constructed as part of a prior development. Adding a comparable median east of the project entrance provides consistent access control along the project's frontage.

Staff finds that the improvements directly address vehicle movements generated by the proposed project, are necessary to maintain safe traffic operations and recommends this condition remain.

Condition #93 - Condition of Approval No. 93 – State Street Frontage Improvements

State Street classified as an Arterial (112′/76′) (with 12-foot landscaped median) along the property westerly frontage within the dedicated right-of-way shall be improved to provide for a 56-foot wide half-width right-of-way, asphalt paving using a TI of 9.0 and PG 70-10 (for all northbound lanes and the southbound lane adjacent to the median), 8-inch curb and gutter 45-feet east of centerline, Class II buffered bike lane per City of San Jacinto Trails Master Plan, sidewalk and streetlights subject to the photometric analysis, per City of San Jacinto, County of Riverside and Caltrans standards.

Existing improvements can remain if determined to be in good condition by the City Engineer. This condition will not require storm water improvements on the west side of State Street for local drainage.

This condition is required to be met prior to occupancy of Pad 1, the Carwash, the Service Station, Shops 1, or Major 1.

Appeal - This median is along our frontage and is being requested to extend all the way down to the intersection of Idyllwild and State St. This median could be striped, but the city wants the raised median as there is an existing issue with left turns across State from the parcels on the east side of State St. We have legitimate drainage and scope-creep concerns. We also don't believe that the project should be solely responsible for the improvement.

Staff Response

The proposed raised landscaped median along State Street is necessary to safely manage vehicle access associated with the project's driveways and reduce turning conflicts on an arterial roadway. The median will discourage unsafe left-turn movements into and out of the project, improve traffic operations, and enhance public safety for motorists using State Street.

Although the applicant suggests that a painted median would be sufficient, the City's engineering standards require a raised landscaped median at this location to provide effective access control and consistency with the planned arterial roadway design.

The required median along State Street, between Ramona Expressway and Idyllwild Drive, is approximately 525 feet in length. Approximately 490 feet, or more than 93 percent, of the median is located directly along the project frontage. Only the remaining 35 feet, approximately 6.7 percent of the total median length, extends beyond the project frontage to Idyllwild Drive. Terminating the median at the project boundary would leave a short, incomplete segment that could create driver confusion and additional turning conflicts near the intersection. Extending the median the remaining 35 feet will complete the improvement at a logical and safe terminus and avoid the need for a separate future construction project and additional disruption to State Street.

Staff finds that the improvements directly address vehicle movements generated by the proposed project, are necessary to maintain safe traffic operations and recommends this condition remain.

CONCLUSION:

The Magnet Shopping Center is a well-designed and appropriately located commercial development that is consistent with the City's General Plan, zoning requirements, and applicable development standards. The project will develop an approximately 14.5-acre vacant site with a coordinated commercial center that includes major retail tenants, restaurants, a service station, a car wash, and related commercial uses. The Planning Commission approved PROJ23-0013, including the Site Plan and Design Review, Tentative Parcel Map, Conditional Use Permit, and five Minor Use Permits, and adopted the Mitigated Negative Declaration and associated Mitigation Monitoring and Reporting Program. The environmental analysis determined that the project, with incorporation of the identified mitigation measures, would not result in a significant effect on the environment. The limited revisions recommended in response to the appeal do not materially alter the project or result in new or substantially more severe environmental impacts requiring additional environmental review.

The applicant's appeal challenges five Conditions of Approval related to drainage, traffic, roadway frontage improvements, and raised medians. Staff evaluated each challenged condition based on the project design, anticipated traffic generation, proposed access points, drainage needs, applicable City standards, and the technical studies prepared for the project. Based on that review, staff recommends granting the appeal in part solely to revise Condition of Approval No. 91 by removing the incorrect reference to a 37-foot parkway or Class I multi-use path and clarifying that existing curb, gutter, and other improvements may remain when determined by the City Engineer to be in good condition. This limited revision addresses the portion of the appeal that has merit and provides greater certainty regarding the required Ramona Expressway frontage improvements.

The remaining portions of the appeal do not support removal or waiver of the disputed conditions. The drainage improvements are necessary to protect the project site and adjacent roadways from flooding while maintaining the function of the adopted Master Drainage Plan. The fair-share contribution for the State Street and Community College Drive traffic signal is based on the project's Traffic Impact Analysis and is limited to the project's calculated 50.34 percent share of the improvement. The frontage and median improvements along Ramona Expressway and State Street are necessary to provide safe project access, manage turning movements, reduce traffic conflicts, and complete the public infrastructure required for the safe and orderly development of the property.

Based on the administrative record, the Conditions of Approval, as recommended to be modified, have an appropriate nexus to the proposed development and are proportional to the project's scope and anticipated impacts. The conditions ensure that the roadway, traffic, and drainage infrastructure necessary to serve the project is completed in conjunction with development and that the cost of project-related improvements is not shifted to the City or the broader community. Accordingly, staff recommends that the City Council affirm the environmental determination and Mitigated Negative Declaration, grant the appeal in part solely as reflected in the recommended revisions to the Conditions of Approval, deny the remainder of the appeal, and uphold, as modified, the Planning Commission's approval of PROJ23-0013 and its component entitlements.

PUBLIC NOTICE AND COMMENTS:

A 10-day notice of public hearing was advertised on July 10, 2026, in the Press Enterprise. In addition, notices of the public hearing were mailed to all property owners within a 300-foot radius of the project site. As of the writing of this report, no comments have been received.

FISCAL IMPACT:

There is no impact to the General Fund by approving the project. The project is conditioned to provide a funding mechanism for the ongoing maintenance of parkway landscaping. The funding mechanism is typically accomplished by annexation into a Community Facility District (CFD). The funding mechanism will ensure that the project does not rely on the General Fund to provide these services.
